Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 October 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	05 April 2021
Global end of trial reached?	Yes
Global end of trial date	05 April 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to determine the effective dose range of YKP3089 as adjunctive therapy for the treatment of partial seizures. The study also evaluated the safety and tolerability of YKP3089 in the partial epilepsy population.

Protection of trial subjects:

This study was conducted according to United States and international standards of Good Clinical Practice (GCP; FDA Title 21 parts 50 and 312 and ICH guidelines), applicable government regulations, and institutional research policies and procedures. Written consent of a subject, using the IEC/IRB-approved consent form, was obtained before the subject underwent any study procedure. All subjects were given adequate time to ask questions and were provided with a signed copy of the consent for his/her records. The consenting process was clearly documented in the subject's chart. The investigator was responsible for ensuring that valid consent was obtained and documented for all subjects.

Background therapy:

The subjects received standard of treatment. They must have been taken 1 to 3 concomitant AEDs at a stable dose for at least 12 weeks before Randomization. They continued these prescribed AED regimens throughout the double-blind phase of the study. During the open-label extension phase of the study, the Investigators were allowed to change the dosage of concomitant AEDs but the subject couldn't be treated with YKP3089 monotherapy. Intermittent benzodiazepines (other than diazepam) were allowed as rescue medication once during the baseline period, twice during the treatment phase, and intermittently in the open-label extension.

Evidence for comparator:

This was a placebo-controlled study and placebo was considered as comparator.

Actual start date of recruitment	30 July 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 48
Country: Number of subjects enrolled	Spain: 27
Country: Number of subjects enrolled	United Kingdom: 8
Country: Number of subjects enrolled	Bulgaria: 37
Country: Number of subjects enrolled	Czechia: 24
Country: Number of subjects enrolled	France: 4
Country: Number of subjects enrolled	Germany: 33

Country: Number of subjects enrolled	Korea, Republic of: 31
Country: Number of subjects enrolled	Romania: 4

Country: Number of subjects enrolled	Serbia: 28
Country: Number of subjects enrolled	Thailand: 8
Country: Number of subjects enrolled	Ukraine: 23
Country: Number of subjects enrolled	United States: 111
Country: Number of subjects enrolled	Australia: 24
Country: Number of subjects enrolled	Israel: 12
Worldwide total number of subjects	437
EEA total number of subjects	192

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	427
From 65 to 84 years	10
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

437 patients were randomly assigned in a 1:1:1:1 ratio to placebo or YKP3089 at 100 mg/day, 200 mg/day, or 400 mg/day. Qualifying subjects entered a 6-week titration phase. According to the original protocol all subjects began with a daily dose of 100 mg, followed by weekly increments of 100 mg in the daily dose, to the target dose.

Pre-assignment

Screening details:

At screening, each subject or their legally authorized representative signed an informed consent form (ICF). Assessments were performed to determine a subject's eligibility for the study. Subjects who met all inclusion criteria and none of the exclusion criteria were assigned to one of the treatment arms or placebo.

Period 1

Period 1 title	Double-Blind Treatment Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer

Blinding implementation details:

This was a double-blind study. Treatment assignments remained blinded to the subject and all study personnel until the database lock of the double-blind treatment period. Selected individuals from the sponsor and/or designee could be unblinded to the study treatments on a need-to-know basis, if they felt it was medically necessary and that knowledge of the treatment assignment was essential for the patient's care.

Arms

Are arms mutually exclusive?	Yes
Arm title	YKP3089 (100 mg qd)

Arm description:

100 mg YKP3089 was administrated daily during 18-week double-blind treatment period (including a 6-week titration phase and 12-week maintenance phase), followed by a 3-week blinded study drug taper period (for subjects leaving the study) or a 2-week blinded conversion period (for subjects participating in the open-label extension), with a final follow-up visit 2 weeks after the last dose of study drug.

Arm type	Experimental
Investigational medicinal product name	YKP3089 100 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

100 mg were administrated once daily. Subjects were supplied with YKP3089 50 mg and 100 mg tablets to be taken orally in the morning. Study drug could have been taken with or without food.

Arm title	YKP3089 (200 mg qd)
------------------	---------------------

Arm description:

200 mg YKP3089 was administrated daily during 18-week double-blind treatment period (including a 6-week titration phase and 12-week maintenance phase), followed by a 3-week blinded study drug taper period (for subjects leaving the study) or a 2-week blinded conversion period (for subjects participating in the open-label extension), with a final follow-up visit 2 weeks after the last dose of study drug.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	YKP3089 200 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

200 mg were administrated once daily. Subjects were supplied with YKP3089 50 mg and 100 mg tablets to be taken orally in the morning. Study drug could have been taken with or without food.

Arm title	YKP3089 (400 mg qd)
------------------	---------------------

Arm description:

400 mg YKP3089 was administrated daily during 18-week double-blind treatment period (including a 6-week titration phase and 12-week maintenance phase), followed by a 3-week blinded study drug taper period (for subjects leaving the study) or a 2-week blinded conversion period (for subjects participating in the open-label extension), with a final follow-up visit 2 weeks after the last dose of study drug.

Arm type	Experimental
Investigational medicinal product name	YKP3089 400 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

400 mg were administrated once daily. Subjects were supplied with YKP3089 50 mg and 100 mg tablets to be taken orally in the morning. Study drug could have been taken with or without food.

Arm title	Placebo
------------------	---------

Arm description:

Placebo was administrated daily during 18-week double-blind treatment period (including a 6-week titration phase and 12-week maintenance phase), followed by a 3-week blinded study drug taper period (for subjects leaving the study) or a 2-week blinded conversion period (for subjects participating in the open-label extension), with a final follow-up visit 2 weeks after the last dose of study drug.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo were administrated once daily. Subjects were supplied with Placebo, identical in appearance to the study drug, to be taken orally in the morning. Placebo could have been taken with or without food.

Period 2

Period 2 title	Open-Label Extension Phase
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

A total of 356 subjects entered the open-label extension phase from the double-blind treatment period.

Arms

Are arms mutually exclusive?	Yes
Arm title	DB YKP3089 100 mg to YKP3089 OLE

Arm description:

95 subjects from YKP3089 100 mg/day group entered the open-label extension phase from the double-blind treatment period.

Arm type	Experimental
Investigational medicinal product name	YKP3089
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects were supplied with YKP3089 50 mg and 100 mg tablets to be taken orally in the morning. Study drug could have been taken with or without food.

The initial target dose for the open-label extension phase was 300 mg/day. However, if a subject was not able to tolerate the 300 mg/day dose, YKP3089 dose was reduced to a minimum of 50 mg/day. If the investigator felt that a subject required a dose that was higher than 300 mg/day, the dose was increased to a maximum of 400 mg/day once the target dose of 300 mg/day was reached. If 50 mg/day of YKP3089 was not tolerated, the subject was withdrawn from the study. The dose adjustments occurred in weekly increments of 100 mg/day or 50 mg/day.

Arm title	DB YKP3089 200 mg to YKP3089 OLE
------------------	----------------------------------

Subject analysis sets

Subject analysis set title	ITT population
Subject analysis set type	Intention-to-treat

Subject analysis set description:

The ITT population included all randomized subjects.

Subject analysis set title	MITT population
Subject analysis set type	Modified intention-to-treat

Subject analysis set description:

MITT population includes all randomized subjects with at least 1 dose of YKP3089 or placebo and had any postbaseline seizure data.

Subject analysis set title	MITT-M population
Subject analysis set type	Sub-group analysis

Subject analysis set description:

MITT-M population includes all randomized subjects who completed the titration phase, took at least 1 dose of YKP3089 or placebo in the maintenance phase, and had any maintenance phase seizure data.

Subject analysis set title	PP population
Subject analysis set type	Per protocol

Subject analysis set description:

PP population includes all randomized subjects with no major protocol deviations, and had at least 80% compliance with study.

Subject analysis set title	SE population
Subject analysis set type	Safety analysis

Subject analysis set description:

The Safety Evaluable (SE) population was the same as the ITT population.

Subject analysis set title	OLE-EA population
Subject analysis set type	Sub-group analysis

Subject analysis set description:

OLE-EA population includes all subjects who entered in open-label extension phase, took at least one dose of open-label study medication, and had any seizure data recorded in open-label extension seizure diary.

Statistical analyses

Statistical analysis title	ANCOVA for Percentage Change in Seizure in DB
-----------------------------------	---

Statistical analysis description:

The primary analysis for this primary efficacy endpoint will be based on the MITT population.

The testing strategy for this primary efficacy analysis is to compare each of the YKP3089 dosage groups with the placebo group. Due to multiple treatment comparisons, a step-down procedure will be used to

ensure the overall type I error rate is controlled at the 5% level. The hierarchy for comparisons is YKP3089 200 mg vs placebo, YKP3089 400 mg vs placebo, YKP3089 100 mg vs placebo.

Comparison groups	YKP3089 (100 mg qd) v YKP3089 (200 mg qd) v YKP3089 (400 mg qd) v Placebo
Number of subjects included in analysis	434
Analysis specification	Pre-specified
Analysis type	superiority ^[1]
P-value	= 0.007 ^[2]
Method	ANCOVA

Notes:

[1] - An analysis of covariance (ANCOVA) model will be fit to the ranked values of the primary efficacy endpoint. The ANCOVA will have terms for ranked baseline seizure rate and randomized treatment group. Ties will be handled using TIES=MEAN.

It should be noted that the primary efficacy analysis uses a non-parametric approach. Because of this, effect sizes are not estimated and tested directly, since testing is made on the rank of the primary efficacy value.

[2] - p-value (YKP3089 100 mg qd vs Placebo) = 0.007

p-value (YKP3089 200 mg qd vs Placebo) < 0.001

p-value (YKP3089 400 mg qd vs Placebo) < 0.001

Primary: Responder Rate (at Least 50% Reduction in Seizure Frequency) During the Maintenance Phase for Europe, Australia, New Zealand, and South Africa

End point title	Responder Rate (at Least 50% Reduction in Seizure Frequency) During the Maintenance Phase for Europe, Australia, New Zealand, and South Africa
-----------------	--

End point description:

The primary efficacy endpoint for Europe, Australia, New Zealand, and South Africa is the responder rate (responder is defined as a $\geq 50\%$ reduction during the maintenance phase of double-blind treatment period in seizure frequency from baseline period).

The primary efficacy endpoint values below will be based on the MITT-M population.

End point type	Primary
----------------	---------

End point timeframe:

During maintenance phase of double-blind treatment period

End point values	YKP3089 (100 mg qd)	YKP3089 (200 mg qd)	YKP3089 (400 mg qd)	Placebo

Responder – No (%)	59.8	43.9	35.8	74.5

Statistical analyses

Statistical analysis title	Fisher Exact Test for Responder Rate in DB
-----------------------------------	--

Statistical analysis description:

The primary analysis for this primary efficacy endpoint will be based on the MITT-M population.

The testing strategy for this primary efficacy analysis is to compare each of the YKP3089 dosage groups with the placebo group. Due to multiple treatment comparisons, a step-down procedure will be used to

ensure the overall type I error rate is controlled at the 5% level. The hierarchy for comparisons is YKP3089 200 mg vs placebo, YKP3089 400 mg vs placebo, YKP3089 100 mg vs placebo.

Comparison groups	YKP3089 (100 mg qd) v YKP3089 (200 mg qd) v YKP3089 (400 mg qd) v Placebo
Number of subjects included in analysis	397
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.036 ^[3]
Method	Fisher exact

Notes:

[3] - p-value (YKP3089 100 mg qd vs Placebo) = 0.036

p-value (YKP3089 200 mg qd vs Placebo) < 0.001

p-value (YKP3089 400 mg qd vs Placebo) < 0.001

Other pre-specified: Percent Change in Seizure Frequency per 28-Day During Open-Label Extension period

End point title	Percent Change in Seizure Frequency per 28-Day During Open-Label Extension period
-----------------	---

End point description:

This efficacy endpoint was defined as the percentage change from pretreatment baseline period in seizure frequency (average monthly seizure rate per 28 days) of Type B, Type C, and Type D seizures during the open-label extension phase.

The efficacy endpoint values below will be based on the OLE-EA population.

End point type	Other pre-specified
----------------	---------------------

End point timeframe:

During open-label extension phase

Adverse events

Adverse events information

Timeframe for reporting adverse events:

During the double-blind treatment period

Adverse event reporting additional description:

The incidence of Treatment-Emergent Adverse Events (TEAEs) was presented in the Safety Evaluable Population (SE population) during the double-blind treatment period. Similar data was observed during Open-Label Extension Phase (OLE-SE Population).

Assessment type	Systematic
