

Clinical trial results:

A randomised, multi-centre, parallel group, double-blind, placebo-controlled study to assess the efficacy and safety of Oscilloccinum® in the treatment of symptoms of Influenza-like illness (ILI)

Summary

EudraCT number	2013-001869-16
Trial protocol	DE
Global end of trial date	19 May 2014

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 February 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 May 2014
Global end of trial reached?	Yes
Global end of trial date	19 May 2014
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to evaluate the efficacy of Oscillococcinum® in the treatment of symptoms of Influenza-like illness (ILI).

Protection of trial subjects:

The Sponsor submitted the study protocol and all information necessary for a detailed review of the clinical study to the competent authority. The study was started after written approval by the competent authority was available.

This study was performed in accordance with Good Clinical Practice (GCP), the Declaration of Helsinki, in its revision of Somerset West 1996, and in accordance with applicable legal and regulatory requirements, including archiving of essential documents.

It was the responsibility of the investigator to obtain signed informed consent from the patient prior to the patient's inclusion in the study. For patients under 18 years of age, the investigator was obliged to collect signed informed consent not only from the patient, but also from the patient's parents.

Background therapy:

-

Evidence for comparator:

-

Actual start date of recruitment	05 November 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 362
Worldwide total number of subjects	362
EEA total number of subjects	362

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	8
Adults (18-64 years)	354
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Patients with ILI defined as sudden onset of symptoms and at least 1 of the systemic symptoms and at least 1 of the respiratory symptoms of ≤ 24 hours duration were recruited.

Patients were randomized at a rate of 1:1 to receive either Oscillococcinum® or placebo, randomization was stratified in 2 strata depending the symptom scores.

Pre-assignment

Screening details:

362 patients were enrolled, 351 patients were randomized, 2 patient randomized were not treated. A total of 110 patients (30.4%) was enrolled with baseline total symptom score B 2 - 8 comprising Stratum 1 and 249 patients (68.8%) with baseline total symptom score B ≥ 9 in Stratum 2.

Treatment groups were balanced in baseline characteristics.

Pre-assignment period milestones

Number of subjects started	362
----------------------------	-----

Number of subjects completed	349
------------------------------	-----

Pre-assignment subject non-completion reasons

Reason: Number of subjects	patient non randomized non treated: 8
----------------------------	---------------------------------------

Reason: Number of subjects	patient non randomized treated: 3
----------------------------	-----------------------------------

Reason: Number of subjects	patients randomized non treated: 2
----------------------------	------------------------------------

Period 1

Period 1 title	Randomized phase (overall period)
----------------	-----------------------------------

Is this the baseline period?	Yes
------------------------------	-----

Allocation method	Randomised - controlled
-------------------	-------------------------

Blinding used	Double blind
---------------	--------------

Roles blinded	Subject, Investigator, Monitor, Data analyst
---------------	--

Blinding implementation details:

Study medication was presented as visually indistinguishable doses. Each carton box contained 10 doses which was sufficient medication for 1 patient.

Sealed individual random code envelopes were prepared for the purpose of individual unblinding of a patient's treatment allocation. These envelopes were sent to the sites together with the study medication.

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Oscillococcinum®
-----------	------------------

Arm description:

Oscillococcinum® was provided as globuli with 1 dose containing 1 g of globuli.

Oscillococcinum® contained the extract from Anas barbariae, hepatis and cordis 200K, 0.85 g sucrose, and 0.15 g lactose.

Oscillococcinum® were to be taken as 3 oral doses per day over 3 days.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Oscillococcinum®
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Granules in single-dose container
Routes of administration	Oral use

Dosage and administration details:

Oscillococcinum® was to be taken as 3 oral doses per day over 3 days. The entire content of 1 dose was to let melt under the tongue.

Patients were to be instructed to take all 9 doses as scheduled even if they were free of symptoms.

Arm title	Placebo
------------------	---------

Arm description:

Placebo were provided as globuli with 1 dose containing 1 g of globuli.

Placebo contained 0.85 g sucrose and 0.15 g lactose and it was not possible to differentiate it from Oscillococcinum® by its appearance and taste.

Placebo were to be taken as 3 oral doses per day over 3 days.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Granules in single-dose container
Routes of administration	Oral use

Dosage and administration details:

Placebo were provided as globuli with 1 dose containing 1 g of globuli.

Placebo contained 0.85 g sucrose and 0.15 g lactose and it was not possible to differentiate it from Oscillococcinum® by its appearance and taste.

Number of subjects in period 1^[1]	Oscillococcinum®	Placebo
Started	175	174
Completed	159	155
Not completed	16	19
Consent withdrawn by subject	-	5
Adverse event, non-fatal	3	1
Other	2	1
Lack of compliance	10	10
Lost to follow-up	1	2

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: For the final analysis, 362 patients were enrolled, and 349 patients were included in the efficacy analysis (FAS), representing an overrun of 108 patients compared to the number of patients included in the first interim analysis.

A total of 351 patients (97.0 %) was randomised, 175 patients (49.9 %) to Oscillococcinum treatment and 176 patients (50.1 %) to placebo treatment. (see Pre-assignment subject non-completion reasons above)

Pharyngitis subjects affected / exposed occurrences (all)	0 / 176 (0.00%) 0	1 / 176 (0.57%) 1	
Sinusitis bacterial subjects affected / exposed occurrences (all)	0 / 176 (0.00%) 0	1 / 176 (0.57%) 1	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 November 2013	Amendment 2; included minor formal corrections, changes and clarifications regarding study variables, addition of two new variables, a modification of the statistical analysis of the primary efficacy endpoint, a detailed definition of the process of obtaining informed consent for children.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The trial was prematurely terminated following the first previewed interim analysis for futility.

Notes:
