

## Clinical trial results:

### A Phase 2, Dose-Finding, Randomized, Parallel-Group, Double-Blind, Placebo-Controlled Study, Evaluating the Safety and Efficacy of Pridopidine 45 mg, 67.5 mg, 90 mg, and 112.5 mg Twice-Daily versus Placebo for Symptomatic Treatment in Patients with Huntington's Disease

#### Summary

EudraCT number	2013-001888-23
Trial protocol	DE IT NL AT PL DK
Global end of trial date	07 July 2016

#### Results information

Result version number	v2 (current)
This version publication date	12 June 2021
First version publication date	09 March 2018
Version creation reason	• Correction of full data set Change of sponsor name and additional information

#### Trial information

##### Trial identification

Sponsor protocol code	TV7820-CNS-20002
-----------------------	------------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02006472
WHO universal trial number (UTN)	-
Other trial identifiers	Sponsor study acronym: PRIDE-HD

Notes:

#### Sponsors

Sponsor organisation name	Prilenia Neurotherapeutics
Sponsor organisation address	Hamenofim 10, Herzliya, Israel, 4672561
Public contact	Henk Schuring, Prilenia Neurotherapeutics Ltd., clinicaltrials@prilenia.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 July 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	16 December 2015
Global end of trial reached?	Yes
Global end of trial date	07 July 2016
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To assess the efficacy of pridopidine 45 to 112.5 mg twice daily (bid) on motor impairment in patients with Huntington's Disease (HD) after 26 weeks of treatment using the Unified Huntington's Disease Rating Scale Total Motor Score (TMS).

The trial was initially designed as a 26-week study to evaluate the effect of pridopidine on motor function. Due to the recognition that the Primary target of pridopidine is S1R, suggesting a therapeutic potential beyond motor function, the ongoing trial was extended from 26 to 52 weeks in order to allow the assessment of pridopidine on total functional capacity (TFC). A minimum of 52 are needed for the placebo group to decline in TFC and allow a window to detect an effect of treatment on TFC.

Approximately 19% of patients completed 26 weeks (period 1) of the study before IRB approvals for the extension and did not continue into period 2 with a duration of up to 52 weeks.

Protection of trial subjects:

Not applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 February 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 16
Country: Number of subjects enrolled	Poland: 50
Country: Number of subjects enrolled	United Kingdom: 39
Country: Number of subjects enrolled	Austria: 27
Country: Number of subjects enrolled	Denmark: 2
Country: Number of subjects enrolled	France: 26
Country: Number of subjects enrolled	Germany: 46
Country: Number of subjects enrolled	Italy: 56
Country: Number of subjects enrolled	Australia: 14
Country: Number of subjects enrolled	Canada: 23
Country: Number of subjects enrolled	Russian Federation: 46
Country: Number of subjects enrolled	United States: 63

Worldwide total number of subjects	408
EEA total number of subjects	262

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	360
From 65 to 84 years	48
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 492 patients were screened; of these, 408 were randomized. The main reason for not randomizing patients was noncompliance with the eligibility criteria.

### Period 1

Period 1 title	Period 1 (through Week 26)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Pridopidine matching placebo (hard capsules)

Patients received a starting dose of placebo matching pridopidine 22.5 mg and were during the first 4 weeks of treatment titrated to the randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.

Arm type	Placebo
Investigational medicinal product name	placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Patients received a starting dose of placebo matching pridopidine 22.5 mg and were during the first 4 weeks of treatment titrated to the randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.

<b>Arm title</b>	Pridopidine 45 mg bid
------------------	-----------------------

Arm description:

Pridopidine given as hard capsules, twice daily

Patients received a starting dose of pridopidine 22.5 mg and were during the first 4 weeks of Treatment titrated to their randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.

Arm type	Experimental
Investigational medicinal product name	pridopidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Pridopidine given as hard capsules, twice daily

Patients received a starting dose of pridopidine 22.5 mg and were during the first 4 weeks of treatment titrated to their randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.

<b>Arm title</b>	Pridopidine 67.5 mg bid
------------------	-------------------------

Arm description:

Pridopidine given as hard capsules, twice daily

Patients received a starting dose of pridopidine 22.5 mg and were during the first 4 weeks of Treatment titrated to their randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.

Arm type	Experimental
Investigational medicinal product name	pridopidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Pridopidine given as hard capsules, twice daily

Patients received a starting dose of pridopidine 22.5 mg and were during the first 4 weeks of treatment titrated to their randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.

<b>Arm title</b>	Pridopidine 90 mg bid
------------------	-----------------------

Arm description:

Pridopidine given as hard capsules, twice daily

Patients received a starting dose of pridopidine 22.5 mg and were during the first 4 weeks of treatment titrated to their randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.

Arm type	Experimental
Investigational medicinal product name	pridopidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Pridopidine given as hard capsules, twice daily

Patients received a starting dose of pridopidine 22.5 mg and were during the first 4 weeks of treatment titrated to their randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.

<b>Arm title</b>	Pridopidine 112.5 mg bid
------------------	--------------------------

Arm description:

Pridopidine given as hard capsules, twice daily

Patients received a starting dose of pridopidine 22.5 mg and were during the first 4 weeks of treatment titrated to their randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.

Arm type	Experimental
Investigational medicinal product name	pridopidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Pridopidine given as hard capsules, twice daily

Patients received a starting dose of pridopidine 22.5 mg and were during the first 4 weeks of treatment titrated to their randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.

---

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Patients who did not enter the second study period from the first study period were lost due to prolonged IRB review periods at some clinical sites.

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo
Reporting group description:	
Pridopidine matching placebo (hard capsules)	
Patients received a starting dose of placebo matching pridopidine 22.5 mg and were during the first 4 weeks of treatment titrated to the randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.	
Reporting group title	Pridopidine 45 mg bid
Reporting group description:	
Pridopidine given as hard capsules, twice daily	
Patients received a starting dose of pridopidine 22.5 mg and were during the first 4 weeks of Treatment titrated to their randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.	
Reporting group title	Pridopidine 67.5 mg bid
Reporting group description:	
Pridopidine given as hard capsules, twice daily	
Patients received a starting dose of pridopidine 22.5 mg and were during the first 4 weeks of Treatment titrated to their randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.	
Reporting group title	Pridopidine 90 mg bid
Reporting group description:	
Pridopidine given as hard capsules, twice daily	
Patients received a starting dose of pridopidine 22.5 mg and were during the first 4 weeks of treatment titrated to their randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.	
Reporting group title	Pridopidine 112.5 mg bid
Reporting group description:	
Pridopidine given as hard capsules, twice daily	
Patients received a starting dose of pridopidine 22.5 mg and were during the first 4 weeks of treatment titrated to their randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.

Number of Cytosine-Adenosine-Guanine (CAG) Repeats			
The normal huntington protein contains multiple repeats of a sequence of three DNA bases, cytosine-adenine-guanine (CAG), which encodes the amino acid glutamine. When more than 36 repeats are present in the protein, stemming from a mutation in the huntingtin gene, an abnormal protein is produced. This mutant form of the protein is more prone to aggregation than versions of the protein with a normal number of repeats. Individuals with 36–40 CAG repeats may or may not develop symptoms of HD, while people with more than 40 repeats will develop the disorder during a normal lifetime.

**Primary: Change From Baseline in Unified Huntington's Disease Rating Scale-Total Motor Score (UHDRS-TMS) at Week 26**

End point title	Change From Baseline in Unified Huntington's Disease Rating Scale-Total Motor Score (UHDRS-TMS) at Week 26
-----------------	--

End point description:

TMS was defined as the sum of all UHDRS motor domains ratings. The motor section of the UHDRS assesses Motor features of Huntington's Disease (HD) with standardized ratings of oculo-motor function, dysarthria, chorea, dystonia, gait, and postural stability. Each of 15 assessments is rated on a scale of 0

(normal) to 4 (marked impairment) for a TMS range of 0-124. Negative change from baseline values indicate improvement.

## Statistical analyses

Statistical analysis title	TMS: Pridopidine 45 mg - Placebo
----------------------------	----------------------------------

Statistical analysis description:

The change from baseline in TMS was analyzed using a Repeated Measures model (SAS® MIXED procedure with REPEATED sub-command). The model included the following fixed effects: categorical week in study by treatment interaction, country, neuroleptic use or no use, baseline TMS score, and categorical week in study by baseline TMS interaction.

Comparison groups	Placebo v Pridopidine 45 mg bid
Number of subjects included in analysis	156
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.3202
Method	Mixed models analysis
Parameter estimate	LSM difference
Point estimate	1.42
Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.39
upper limit	4.23

<b>Statistical analysis title</b>	TMS: Pridopidine 67.5 mg - Placebo
Statistical analysis description:

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

52 weeks

Assessment type	Non-systematic
-----------------	----------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	17.0
--------------------	------

### Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Pridopidine matching placebo (hard capsules)

Patients received a starting dose of placebo matching pridopidine 22.5 mg and were during the first 4 weeks of treatment titrated to the randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.

Reporting group title	Pridopidine 45 mg bid
-----------------------	-----------------------

Reporting group description:

Pridopidine given as hard capsules, twice daily

Patients received a starting dose of pridopidine 22.5 mg and were during the first 4 weeks of Treatment titrated to their randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.

Reporting group title	Pridopidine 67.5 mg bid
-----------------------	-------------------------

Reporting group description:

Pridopidine given as hard capsules, twice daily

Patients received a starting dose of pridopidine 22.5 mg and were during the first 4 weeks of Treatment titrated to their randomized dose level. The randomized dose level was then to be maintained for the remainder of the treatment period through Week 52.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
24 September 2013	<p>Amendment 1 to the protocol (dated 24 September 2013) was issued before any patients were enrolled in the study.</p> <p>The following major procedural changes (not all-inclusive) were made to the protocol:</p> <ul style="list-style-type: none"><li>- The duration of treatment with study drug was increased from 12 weeks to 26 weeks</li><li>- The 45 mg dose was removed from the efficacy analyses</li><li>- The timing of the DSMB meetings was changed</li><li>- The opportunity to enter the open-label extension study was introduced</li><li>- Rules for discontinuation of treatment groups were modified</li></ul>
03 February 2014	<p>Amendment 2 to the protocol (dated 03 February 2014) was issued before any patients were enrolled in the study.</p> <p>Clarification that the mPPT will be used as the secondary efficacy endpoint</p> <ul style="list-style-type: none"><li>- Increased frequency of DSMB meetings until 100 patients (20 from each treatment group) have completed two weeks of treatment on full dose</li><li>- Clarification that Patients with a legal guardian should be consented according to local requirements</li><li>- The EQ-5D-5L scale was added as an assessment</li><li>- The possibility for patients to continue in the study after study drug discontinuation, due to safety or tolerability reasons, was introduced</li><li>- Clarification regarding the number of capsules in the dispensed bottles</li><li>- Change to time points at which exploratory efficacy endpoints (PBA-s, CIBIC-Plus, PDS, CGI-C, Walk-12, and TUG test) are assessed to reduce patient burden</li></ul>
16 September 2014	<p>Amendment 3 to the protocol (dated 16 September 2014) was issued after 24 patients were enrolled into the study. Changes to the protocol were considered to have no negative impact on the safety of patients already enrolled into the study.</p> <p>The following major procedural changes (not all-inclusive) were made to the protocol:</p> <ul style="list-style-type: none"><li>- Extension of the period between screening and baseline visit to 12 weeks, to allow a switch in concomitant drugs if deemed medically justified and for the benefit of the patient by the investigator</li><li>- Revised text to reflect that the investigator can unblind the treatment code in an emergency situation without prior approval of the sponsor</li><li>- The ECG on Day 56 would be optional, unless required by local regulations</li><li>- Clarification regarding the ECG at Week 2 (ie, that it will be performed in triplicate before the afternoon dose of that visit)</li><li>- Prolonged QTcF deleted from baseline visit as an eligibility criterion. Prolonged QT at baseline will be handled according to the discontinuation rules specified in the protocol</li><li>- Inclusion criterion was revised to read "IS equal to or less than 90% at the screening visit", to include also patients with a IS of 90%</li><li>- The protocol was updated to require that all serious adverse events be reported within 24 hours of when the investigator learns of the event, regardless of whether it's a non-working day</li><li>- Instructions on how to resume study drug after temporary interruption</li><li>- Prohibited medications timing also changed from 6 weeks prior to screening to 6 weeks prior to baseline (eg, QT-interval prolonging meds, CYP2D6 metabolized meds, and tetrabenazine)</li><li>- Rescreening of selected patients now permitted if not originally eligible for enrollment</li><li>- Clarification regarding the time frame for suicide attempts prior to screening (ie, if the attempt or acts were performed within 1 year of screening)</li><li>- New text regarding required reporting of suicidality as an adverse event</li></ul>

12 January 2015	<p>Amendment 4 to the protocol (dated 12 January 2015) was issued after 133 patients were enrolled into the study. Changes to the protocol were considered to have no negative impact on the safety of patients already enrolled into the study. The study was extended from 26 to 52 weeks, to allow the assessment of pridopidine on TFC. A minimum of 52 weeks are needed for placebo to decline in TFC to allow a window to detect a potential therapeutic effect of a drug on this endpoint.</p> <p>In addition, the following major procedural changes (not all-inclusive) were made to the protocol:</p> <ul style="list-style-type: none"> <li>- endpoints modified and/or added to reflect the study extension</li> <li>- days of assessments and procedures modified to reflect changes in time points</li> <li>- clarification to allow only 1 titration during the entire study period</li> <li>- new text added to define the population sets that will be used to analyze the data from the second study period</li> </ul>
31 March 2016	<p>Amendment 5 to the protocol (dated 31 March 2016) was issued after 408 patients were enrolled into the study. Changes to the protocol were considered to have no negative impact on the safety of patients already enrolled into the study.</p> <ul style="list-style-type: none"> <li>- Addition of 2 telephone calls for safety evaluation (at Weeks 40 to 44 and Weeks 46 to 51) including C-SSRS and an abbreviated PBA-s assessment</li> <li>- Addition of suicidal ideations and suicide attempts as protocol-defined adverse events for expedited reporting</li> <li>- Addition of discontinuation criteria for individual patients and stopping rules for treatment groups</li> <li>- Clarification of study conduct</li> <li>- Revision of the Study Procedures and Assessments and Overall Study Schema to reflect the amended study design</li> </ul>

Notes:

---

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

None reported
