Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 August 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 August 2014
Global end of trial reached?	Yes
Global end of trial date	26 August 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This is a Phase 3, randomized, double-blind, double-dummy, multicenter, prospective study to assess the efficacy, safety, and pharmacokinetics of eravacycline compared with ertapenem in the treatment of adult complicated intra-abdominal infections (cIAI).

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonisation (ICH) E6 Good Clinical Practice (GCP) (consolidated guidelines pertaining to informed consent). At the first visit, prior to initiation of any study-related procedures, participants gave their written consent to participate in the study after having been informed about the nature and purpose of the study, participation/termination conditions, and risks and benefits; however, microbiologic specimens collected during routine operative care prior to participant consent may have been used for study purposes with the participant's knowledge and consent. Additionally, a Data Safety Monitoring Board was established to periodically review safety data (unblinded) from all participants and advise the Sponsor regarding the continuing safety of current participants and those yet to be recruited.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 August 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Russian Federation: 52
Country: Number of subjects enrolled	Romania: 84
Country: Number of subjects enrolled	United States: 38
Country: Number of subjects enrolled	Ukraine: 76
Country: Number of subjects enrolled	Czech Republic: 31
Country: Number of subjects enrolled	Latvia: 48
Country: Number of subjects enrolled	South Africa: 1
Country: Number of subjects enrolled	Bulgaria: 89
Country: Number of subjects enrolled	Lithuania: 52
Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	Estonia: 66
Worldwide total number of subjects	541
EEA total number of subjects	374

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	377
From 65 to 84 years	158
85 years and over	6

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants enrolled in this study were at least 18 years of age with a cIAI. Participants were eligible to participate in the study if they met all of the inclusion criteria and none of the exclusion criteria at the Screening visit.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Carer, Assessor, Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Eravacycline, 1.0 mg/kg q12h

Arm description:

Eravacycline was administered intravenously (IV) at a dose of 1.0 milligrams per kilogram of body weight (mg/kg) every 12 hours (q12h) for a minimum of 4 days and a maximum of 14 days.

Arm type	Experimental
Investigational medicinal product name	Eravacycline
Investigational medicinal product code	TP-434
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

1.0 mg/kg q12h for 4-14 days

Arm title	Ertapenem, 1.0 g q24h
------------------	-----------------------

Arm description:

Ertapenem was administered IV at a dose of 1.0 gram (g) every 24 hours (q24h) for a minimum of 4 days and a maximum of 14 days.

Arm type	Active comparator
Investigational medicinal product name	Ertapenem
Investigational medicinal product code	
Other name	Invanz
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

1.0 g q24h for 4-14 days

Number of subjects in period 1	Eravacycline, 1.0 mg/kg q12h	Ertapenem, 1.0 g q24h
Started	270	271
Received any amount of study drug	270	268
Completed	246	255
Not completed	24	16
Consent withdrawn by subject	3	2
Enterococcus Resistant	-	1
Adverse event, non-fatal	3	6
Randomized but was a Screen Failure	-	1
Lost to follow-up	15	3
Inadvertently Not Scheduled	1	-
Noncompliance	2	3

All randomized participants who had no major protocol deviations (CE Population).

Primary: Clinical Response Of Eravacycline And Ertapenem Treatment Arms At The Test-Of-Cure (TOC) Visit In The MITT Population

End point title	Clinical Response Of Eravacycline And Ertapenem Treatment Arms At The Test-Of-Cure (TOC) Visit In The MITT Population
-----------------	---

End point description:

This was the co-primary outcome measure for the European Medicines Agency (EMA). Clinical response was classified as cure (complete resolution or significant improvement of signs and symptoms of the index infection), failure (death related to cIAI, unplanned surgical procedures or percutaneous drainage procedures, persisting or recurrent infection within the abdomen, postsurgical wound infection, or administration of effective concomitant antibacterial therapy), or indeterminate (outcome was neither cure nor failure, or assessment was not available). Participants who were failures at the End-of-Treatment (EOT) visit (within 24 hours of last dose) were considered failures at the TOC visit. The number of participants with a clinical response classification of cure, failure, or indeterminate is

presented.

End point type	Primary
End point timeframe:	
TOC visit: 25-31 days after the first dose of study drug	

End point values	Eravacycline, 1.0 mg/kg q12h - MITT Population	Ertapenem, 1.0 g q24h - MITT Population

Units: participants				
number (not applicable)				
Cure	235	238		
Failure	19	15		
Indeterminate	16	15		

Notes:

[1] - All randomized participants who received any amount of study drug.

[2] - All randomized participants who received any amount of study drug.

Statistical analyses

Statistical analysis title	Statistical analysis 1
----------------------------	------------------------

Statistical analysis description:

A 2-sided 99% confidence interval (CI) for the observed difference in primary outcome rates (eravacycline treatment group minus ertapenem treatment group) was calculated. If the lower limit of the 99% CI for the difference in clinical cure rates exceeded -12.5%, then the null hypothesis was rejected, and the non-inferiority of eravacycline to ertapenem was declared.

Comparison groups	Eravacycline, 1.0 mg/kg q12h - MITT Population v Ertapenem, 1.0 g q24h - MITT Population
Number of subjects included in analysis	538
Analysis specification	Pre-specified
Analysis type	non-inferiority
Parameter estimate	Mean difference (net)
Point estimate	-1.8
Confidence interval	
level	Other: 99 %
sides	2-sided

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 June 2013	Amendment number 1 was implemented before any participants were enrolled and documented the following: the increase in the study sample size, inclusion of the micro-ITT population, change in assessment timing, change in microbiological specimen collection, clarification of inclusion and exclusion criteria, refinement of clinical response assessment, and other global administrative changes and clarifications.
31 October 2013	Amendment number 2 was implemented after 197 participants were enrolled and documented the following: the change in primary analysis populations and non-inferiority margin for the EMA, revision of the inclusion and exclusion criteria, change in the dose of eravacycline was limited to 1.0 mg/kg, up to a maximum of 150 mg q12h, changes in the restricted concomitant medications, clarification on study drug and placebo preparation, change in the maximum dosage in 24 hours, and other global administrative changes and clarifications. Changes to the protocol were considered to have no negative impact on the safety of participants already enrolled into the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
