#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

---

**Results analysis stage**

---

Analysis stage	Final
Date of interim/final analysis	24 July 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 July 2017
Global end of trial reached?	Yes
Global end of trial date	24 July 2017
Was the trial ended prematurely?	Yes

Notes:

---

**General information about the trial**

---

Main objective of the trial:

To demonstrate that tolvaptan effectively and safely increases and maintains serum sodium concentrations in children and adolescent subjects with euvolemic or hypervolemic hyponatremia.

Protection of trial subjects:

This trial was conducted in compliance with Good Clinical Practice guidelines for conducting, recording, and reporting trials, as well as for archiving essential documents. Consistent with ethical principles for the protection of human research subjects, no trial procedures were performed on trial candidates until written consent had been obtained from them. The informed consent form, protocol, and amendments for this trial were submitted to and approved by the institutional review board or ethics committee at each respective trial center.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 September 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

---

**Subjects enrolled per country**

Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	Italy: 1
Country: Number of subjects enrolled	United States: 7
Worldwide total number of subjects	9
EEA total number of subjects	2

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	8
Adolescents (12-17 years)	1
Adults (18-64 years)	0

From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

A total of 42 sites were activated, 18 in the European Union and 24 in North America. After approximately 32 months of open enrollment, only 14 subjects were screened and 9 subjects were enrolled. The trial was terminated due to low subject enrollment which made the trial highly impracticable to conduct. The trial was not terminated due to safety.

### Pre-assignment

Screening details:

The trial consisted of a screening phase, two treatment phases (Phases A and B), and follow-up Phase C. Overall, in this trial, subjects underwent treatment (2 to 5 days of tolvaptan among 2 treatment phases) and a post-last dose follow-up phase of 14 days.

### Period 1

Period 1 title	Treatment Phase A
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Arm title	Phase A: All participants
-----------	---------------------------

Arm description:

During Treatment Phase A, subjects received tolvaptan once daily on Days 1 and 2. If the serum sodium level did not increase at least 4 mEq/L by Day 2, treatment was extended one additional day (to Day 2a). On Day 2a, subjects achieving an increase in serum sodium of  $\geq 4$  mEq/L were defined as responders, and subjects not achieving a  $\geq 4$  mEq/L increase in serum sodium were defined as nonresponders.

Arm type	Experimental
Investigational medicinal product name	Tolvaptan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Syrup
Routes of administration	Oral use

Dosage and administration details:

Subjects received tolvaptan once daily on Days 1 and 2. If the serum sodium level did not increase at least 4 mEq/L by Day 2, treatment was extended one additional day (to Day 2a).

Number of subjects in period 1	Phase A: All participants
Started	9
Completed	7
Not completed	2
Adverse Events	2

**Period 2**

Period 2 title	Treatment Phase B: Responder
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

**Arms**

Are arms mutually exclusive?	No
<b>Arm title</b>	Late Withdrawal

## Arm description:

Subjects who were responders (serum sodium increased by  $\geq 4$  mEq/L) from Phase A continued to Treatment Phase B (Randomization Phase) on Day 3, and were randomized to the Late Withdrawal group (continuing tolvaptan treatment for Days 3 and 4).

Arm type	Experimental
Investigational medicinal product name	Tolvaptan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Syrup, Tablet
Routes of administration	Oral use

## Dosage and administration details:

Subjects continued tolvaptan treatment on Days 3 and 4.

<b>Arm title</b>	Early Withdrawal
------------------	------------------

## Arm description:

Subjects who were responders (serum sodium increased by  $\geq 4$  mEq/L) from Phase A continued to Treatment Phase B (Randomization Phase) on Day 3, and were randomized to the Early Withdrawal group (not receiving additional tolvaptan on Days 3 or 4). Subjects randomized to Early Withdrawal were monitored for any interventions needed to maintain appropriate serum sodium levels. Where sodium levels declined by  $\geq 4$  mEq/L, or where the overall clinical condition warranted further intervention to increase serum sodium levels, subjects were treated per the investigator's preferred standard of care. Any intervention, including fluid restriction, during the first 48 hours of the Early Withdrawal phase was defined as rescue therapy, and subject data was censored thereafter.

Arm type	Any interventions
No investigational medicinal product assigned in this arm	

<b>Arm title</b>	Treatment Phase B: Responder (Overall)
------------------	--

## Arm description:

Subjects who were responders (serum sodium increased by  $\geq 4$  mEq/L) continued to Treatment Phase B (Randomization Phase) on Day 3, and were randomized to either the Early Withdrawal group (not receiving additional tolvaptan on Days 3 or 4) or the Late Withdrawal group (continuing tolvaptan treatment for Days 3 and 4).

Arm type	Experimental
Investigational medicinal product name	Tolvaptan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Syrup, Tablet
Routes of administration	Oral use

## Dosage and administration details:

Subjects continued tolvaptan treatment on Days 3 and 4.

Number of subjects in period 2	Late Withdrawal	Early Withdrawal	Treatment Phase B: Responder (Overall)
Started	2	3	5
Completed	2	3	5

### Period 3

Period 3 title	Treatment Phase B: Non-responder
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Study Drug

Arm description:

Subjects who were nonresponders during Phase A were not randomized in Phase B but were treated per the investigator's discretion, and continued tolvaptan for Days 3 and 4.

Arm type	Experimental
Investigational medicinal product name	Tolvaptan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Syrup, Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects continued tolvaptan treatment on Days 3 and 4.

<b>Arm title</b>	Standard of Care
------------------	------------------

Arm description:

Subjects who were nonresponders during Phase A were not randomized in Phase B but were treated per the investigator's discretion. The subjects in this arm discontinued tolvaptan and received the investigator's preferred standard of care for Days 3 and 4.

Arm type	Standard care
No investigational medicinal product assigned in this arm	

Number of subjects in period 3	Study Drug	Standard of Care
Started	1	1
Completed	1	1

Reporting group description: Subjects who were nonresponders during Phase A were not randomized in Phase B but were treated per the investigator's discretion, and continued tolvaptan for Days 3 and 4.	
Reporting group title	Standard of Care
Reporting group description: Subjects who were nonresponders during Phase A were not randomized in Phase B but were treated per the investigator's discretion. The subjects in this arm discontinued tolvaptan and received the investigator's preferred standard of care for Days 3 and 4.	

### Primary: Mean Change from Baseline in Serum Sodium Concentration (mEq/L) for Responders

End point title	Mean Change from Baseline in Serum Sodium Concentration (mEq/L) for Responders <sup>[1]</sup>
End point description: To assess the change in serum sodium level for responders from Day 2 (or 2a) at the end of Treatment Phase A (where all subjects received tolvaptan) to the end of Treatment Phase B for the Early compared to Late Withdrawal groups. Once a subject was randomized to Treatment Phase B, any additional therapies for the purpose of raising serum sodium, including fluid restriction, was considered rescue therapy. Upon receipt of rescue therapy, a subject's endpoint data was collected and then censored from the efficacy analysis thereafter unless specified.	
End point type	Primary
End point timeframe: Day 2/2a/3, Day 4/5	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The trial was terminated due to low subject recruitment and enrollment which made the trial highly impracticable or impossible to conduct. No statistical analysis was done for the primary endpoint.

## Secondary: Number of subjects with adverse events (AEs)

End point title	Number of subjects with adverse events (AEs)
End point description:	
An AE was defined as any untoward medical occurrence in a patient or clinical trial subject administered a medicinal product and which did not necessarily have a causal relationship with this treatment. AEs would not include information recorded as medical history at screening for pre planned procedures for which the underlying condition was known and no worsening occurred. An adverse reaction was any untoward and unintended response to an investigational medicinal product (IMP) related to any dose administered.	
End point type	Secondary
End point timeframe:	
Adverse events were recorded from the time of the informed consent was signed until the follow-up visit 14 (+ 2) days post-last dose.

## Secondary: Mean change from baseline in serum sodium concentration (mEq/L) in Treatment Phase A

End point title	Mean change from baseline in serum sodium concentration (mEq/L) in Treatment Phase A
-----------------	--

End point description:

To assess the change from baseline in serum sodium concentration at the end of Day 2 (or 2a) at the end of Treatment Phase A. A hierarchical testing procedure was used to maintain the overall experiment-wise type I error rate at 0.05. Thus, if the primary efficacy analysis yielded a statistically significant result at an alpha level of 0.05 (2-sided), then the paired t-test was performed at an alpha level of 0.05 for the key secondary endpoint.

### Reporting groups

Reporting group title	Treatment Phase A
-----------------------	-------------------

Reporting group description:

During Treatment Phase A, subjects received tolvaptan once daily on Days 1 and 2. If the serum sodium level did not increase at least 4 mEq/L by Day 2, treatment was extended one additional day (to Day 2a). On Day 2a, subjects achieving an increase in serum sodium of  $\geq 4$  mEq/L were defined as responders, and subjects not achieving a  $\geq 4$  mEq/L increase in serum sodium were defined as nonresponders.

Reporting group title	Treatment Phase B: Responder - Late Withdrawal
-----------------------	--

Reporting group description:

Subjects who were responders (serum sodium increased by  $\geq 4$  mEq/L) from Phase A continued to Treatment Phase B (Randomization Phase) on Day 3, and were randomized to the Late Withdrawal group (continuing tolvaptan treatment for Days 3 and 4).

Reporting group title	Treatment Phase B: Responder - Early Withdrawal
-----------------------	---

Reporting group description:

Subjects who were responders (serum sodium increased by  $\geq 4$  mEq/L) from Phase A continued to Treatment Phase B (Randomization Phase) on Day 3, and were randomized to the Early Withdrawal group (not receiving additional tolvaptan on Days 3 or 4). Subjects randomized to Early Withdrawal were monitored for any interventions needed to maintain appropriate serum sodium levels. Where sodium levels declined by  $\geq 4$  mEq/L, or where the overall clinical condition warranted further intervention to increase serum sodium levels, subjects were treated per the investigator's preferred standard of care. Any intervention, including fluid restriction, during the first 48 hours of the Early Withdrawal phase was defined as rescue therapy, and subject data was censored thereafter.

Reporting group title	Treatment Phase B: Non-responder - Study Drug
-----------------------	---

Reporting group description:

Subjects who were nonresponders during Phase A were not randomized in Phase B but were treated per the investigator's discretion, and continued tolvaptan for Days 3 and 4.

Reporting group title	Treatment Phase B: Non-responder - Standard of Care
-----------------------	---

Reporting group description:

Subjects who were nonresponders during Phase A were not randomized in Phase B but were treated per the investigator's discretion. The subjects in this arm discontinued tolvaptan and received the investigator's preferred standard of care for Days 3 and 4.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 November 2013	Amendment 1: To update the clinical management representative for this trial To remove the serum chemistry assessment at 7 (plus/minus 1) days post-randomization To change the sample size from 80 to 70 responders To clarify that subjects who cannot safely swallow the tablet are excluded until a liquid formulation is available To add neurological exam as an exploratory variable To update the dosing rationale based on starting doses (mg/kg) used for hyponatremia trials of tolvaptan in adults To change early termination from the 7-day Follow-up Visit to Day 5/6 To clarify that Phase B (Randomization Phase) applies to all subjects To correct the definition of a rapid correction of serum sodium To update the interim analysis To update the contact list for reporting an IRE
19 May 2014	Amendment 2: To increase the consistency of this protocol with other tolvaptan pediatric hyponatremia protocols To add neurocognitive and quality-of-life assessments as exploratory endpoints To clarify study design, procedures, and assessments To better define study phases and associated visits To provide greater detail about clinical laboratory tests To add Tanner staging to the assessments performed during the physical examination To better define completers and stopping rules To incorporate newly revised definitions of IMP causality
26 February 2015	Amendment 3: Implementation of additional serum sodium testing during drug titration to align with the current EU label (SmPC) for the adult indication of hyponatremia. Safety testing for serum sodium was added at interim time points during titration with the option of using a point of care device to minimize impact on total blood volume required for the trial. Clarification of the "baseline" assessment for trial qualification. Additional background data from non-clinical juvenile toxicity studies. Updates to clarify the titration and rescue therapy schematic. Clarify roll-over into extension study 156-11-294. Implementation of a suspension formulation for short-term use in hospitalized subjects. Implementation of an optional swallow test for the tablet formulation.
07 May 2015	Amendment 4: Correction of typographical errors in the dosing table for the suspension for subjects taking a CYP3A inhibitor. Removed the word "Tablet" from the title of Table 2.1.1-2 as the table includes dosing information for tolvaptan tablets and for the suspension formulation of tolvaptan. Updated the Clinical Management contact information on the title page and in Appendix 1. Correction of typographical error in Section 2.1.1 Dosing Rationale.
17 November 2015	Amendment 5 : The main intent was to clarify administrative sections, align with current protocol templates, and incorporate recent requests from Regulatory Authorities (Food and Drug Administration [FDA]).

## Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
24 July 2017	The trial was terminated 24 Jul 2017 due to low subject recruitment and enrollment which made the trial highly impracticable or impossible to conduct. The trial was not terminated due to safety reasons. The Food and Drug Administration (FDA) granted Otsuka release/Pediatric Research Equity Act (PREA) waiver on 19 Jul 2017 and rescinded the pediatric written request (WR) on 19 Jul 2017.	-
