Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 January 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	29 January 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of the study was to evaluate the accuracy of the length-109 (subsequently defined as the length-13) probe set panel in predicting mucosal healing (ie, improvement in the endoscopic appearance of the mucosa) at Week 6 as measured by the area under a Receiver Operating Characteristic (ROC) curve (AUCROC).

Protection of trial subjects:

The safety assessments included adverse events (AEs), clinical laboratory data (hematology, serum chemistry, antinuclear antibody [ANA] and anti-double-stranded deoxyribonucleic acid [dsDNA] antibodies, Immunogenicity and Injection-site Reactions).

Background therapy:

Subjects could have been receiving concomitant treatment with 5-aminosalicylates (5-ASAs), corticosteroids, and /or immunomodulators {(ie. 6-mercaptopurine (6-MP), azathioprine (AZA), or methotrexate (MTX))}.

Evidence for comparator: -

Actual start date of recruitment	10 February 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Bulgaria: 3
Country: Number of subjects enrolled	Canada: 15
Country: Number of subjects enrolled	Czech Republic: 6
Country: Number of subjects enrolled	Germany: 3
Country: Number of subjects enrolled	France: 2
Country: Number of subjects enrolled	Hungary: 1
Country: Number of subjects enrolled	Poland: 21
Country: Number of subjects enrolled	Russian Federation: 2
Country: Number of subjects enrolled	Ukraine: 7
Country: Number of subjects enrolled	United States: 41
Worldwide total number of subjects	103
EEA total number of subjects	38

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	98
From 65 to 84 years	5
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted from 10 February 2014 to 29 January 2016.

Pre-assignment

Screening details:

A total of 103 subjects were enrolled in study among these subjects 3 subjects received no maintenance treatment and 100 subjects received maintenance treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Golimumab Induction Only

Arm description:

All subjects only received golimumab induction subcutaneous (SC) dose of 200 milligram (mg) at week 0 followed by 100 mg at week 2. No maintenance dose given to subjects in this reporting group.

Arm type	Experimental
Investigational medicinal product name	Golimumab 200 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received golimumab SC dose of 200 mg as 2 pre-filled syringes of 100 mg each at week 0.

Investigational medicinal product name	Golimumab 100 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received golimumab SC dose of 100 mg at week 2.

Arm title	Golimumab Induction + 50 mg maintenance
------------------	-----------------------------------------

Arm description:

Subjects received golimumab induction SC dose of 200 mg at week 0 and 100 mg at week 2 followed by SC maintenance dose of golimumab 50 mg at week 6 and every 4 weeks (q4w) thereafter through week 50.

Arm type	Experimental
Investigational medicinal product name	Golimumab 200 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received golimumab SC dose of 200 mg as 2 pre-filled syringes of 100 mg each at week 0.

Investigational medicinal product name	Golimumab 100 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Subcutaneous use
Dosage and administration details:	
Subjects received golimumab SC dose of 100 mg at week 2.	
Investigational medicinal product name	Golimumab 50 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use
Dosage and administration details:	
Subjects received golimumab SC dose of 50 mg at week 6 and q4w thereafter through week 50.	
Arm title	Golimumab induction + 100 mg maintenance

Arm description:

Subjects received golimumab induction SC dose of 200 mg at week 0 and 100 mg at week 2 followed by SC maintenance dose of golimumab 100 mg at week 6 and every 4 weeks (q4w) thereafter through week 50.

Arm type	Experimental
Investigational medicinal product name	Golimumab 200 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received golimumab SC dose of 200 mg as 2 pre-filled syringes of 100 mg each at week 0.

Investigational medicinal product name	Golimumab 100 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received golimumab SC dose of 100 mg at week 2 as induction dose followed by 100 mg dose at week 6 and q4w thereafter through week 50 as maintenance dose.

Number of subjects in period 1	Golimumab Induction Only	Golimumab Induction + 50 mg maintenance	Golimumab induction + 100 mg maintenance

End points

End points reporting groups

Reporting group title	Golimumab Induction Only
Reporting group description: All subjects only received golimumab induction subcutaneous (SC) dose of 200 milligram (mg) at week 0 followed by 100 mg at week 2. No maintenance dose given to subjects in this reporting group.	
Reporting group title	Golimumab Induction + 50 mg maintenance
Reporting group description: Subjects received golimumab induction SC dose of 200 mg at week 0 and 100 mg at week 2 followed by SC maintenance dose of golimumab 50 mg at week 6 and every 4 weeks (q4w) thereafter through week 50.	
Reporting group title	Golimumab induction + 100 mg maintenance
Reporting group description: Subjects received golimumab induction SC dose of 200 mg at week 0 and 100 mg at week 2 followed by SC maintenance dose of golimumab 100 mg at week 6 and every 4 weeks (q4w) thereafter through week 50.	
Subject analysis set title	Biomarker analysis set
Subject analysis set type	Modified intention-to-treat
Subject analysis set description: The biomarker analysis set consisted of all treated subjects (subjects who received at least 1 [partial or complete] administration of golimumab) who had their biomarker measurement at baseline.	

Primary: The Area Under the Receiver Operating Characteristic Curve (AUCROC) of a Subset of the Length-109 Probe set Panel as a Predictor of Mucosal Healing at Week 6

End point title	The Area Under the Receiver Operating Characteristic Curve (AUCROC) of a Subset of the Length-109 Probe set Panel as a Predictor of Mucosal Healing at Week 6 ^[1]
End point description: The area under the Receiver Operating Characteristic curve is a mathematical model used to measure the accuracy of a test. The accuracy of a subset of the length-109 probe set panel (a genetic test administered at screening) is being evaluated in terms of its ability to predict mucosal healing at Week 6. An area of 1.0 represents a perfect test; an area of 0.5 represents a test that is no better at predicting mucosal healing than "flipping a coin". Areas above 0.5 represent increasing accuracy. The accuracy of the length-13 probe set panel in predicting mucosal healing at Week 6 is significantly greater than 0.5 (AUCROC: 0.688; lower bound of 95% CI: 0.589; p-value=0.002).	
End point type	Primary
End point timeframe: Week 6	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analysis involving treatment comparisons is not reported for this endpoint as the analysis is based on biomarker analysis set without treatment comparisons.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The 2 maintenance doses (50 mg q4w and 100 mg q4w) were not randomly assigned but followed regional posology guidelines in each country. Therefore, the interpretation of results was based on the total number of subjects treated.

Notes:
