

Clinical trial results:

A Phase 2, Randomized, Active-Controlled, Observer-Blinded Trial to Assess the Safety, Tolerability and Immunogenicity of MCV4, Tdap Vaccine and Bivalent rLP2086 Vaccine When Administered Concomitantly in Healthy Subjects Aged \geq to 10 Years to Less Than 13 Years

Due to a system error, the data reported in v1 is not correct and has been removed from public view.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001037-PIP02-11
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes
----------------------------------------------------------------------	-----

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 March 2015
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	08 May 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

- Demonstrate that the immune response (based on geometric mean titer [GMT]) induced by Quadrivalent meningococcal polysaccharide conjugate (MCV4) and Tetanus, diphtheria, and acellular pertussis (Tdap) vaccines given with bivalent recombinant lipoprotein 2086 (rLP2086) vaccine (Group 1) was non-inferior to the immune response induced by MCV4 and Tdap vaccines alone (Group 2) measured 1 month after the Vaccination 1 in both groups. The immune response to all components of MCV4 and Tdap vaccines were assessed.
- Demonstrate that the immune response (based on GMT) induced by bivalent rLP2086 vaccine measured by serum bactericidal assay using human complement (hSBA) performed with 2 *Neisseria meningitidis* serogroup B (MnB) strains (subfamily A and B proteins) given with MCV4 and Tdap vaccines (Group1) was non-inferior to the immune response induced by bivalent rLP2086 vaccine alone (Group3), measured 1 month after Vaccination 3 with bivalent rLP2086 vaccine in both groups.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -	
Actual start date of recruitment	28 September 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 2648
Worldwide total number of subjects	2648
EEA total number of subjects	0

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	2340
Adolescents (12-17 years)	308
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 2648 subjects were enrolled in this study. Of these, 19 subjects were randomized but did not receive study vaccination.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	MCV4+Tdap+rLP2086

Arm description:

Randomized to receive MCV4 and Tdap vaccine on 0-- month, MnB rLP2086 vaccine on a 0--, 2--, 6-- month schedule.

Arm type	Active comparator
Investigational medicinal product name	MCV4 vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Randomized to receive MCV4 vaccine intramuscularly into the upper deltoid muscle of the right arm on 0-- month.

Investigational medicinal product name	Tdap vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Randomized to receive Tdap vaccine intramuscularly into the upper deltoid muscle of the right arm on 0-- month.

Investigational medicinal product name	rLP2086 vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Randomized to receive MnB rLP2086 vaccine intramuscularly into the upper deltoid muscle of the left arm on a 0--, 2--, 6-- month schedule.

Arm title	MCV4 + Tdap + Saline
------------------	----------------------

Arm description:

Randomized to receive MCV4 and Tdap vaccine on 0- month, Saline on a 0--, 2--, 6-- month schedule.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	MCV4 vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Randomized to receive MCV4 vaccine intramuscularly into the upper deltoid muscle of the right arm on 0-- month.

Investigational medicinal product name	Tdap vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Randomized to receive Tdap vaccine intramuscularly into the upper deltoid muscle of the right arm on 0-- month.

Investigational medicinal product name	Saline
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Randomized to receive saline intramuscularly into the upper deltoid muscle of the left arm on a 0--, 2--, 6-- month schedule.

Arm title	Saline+Saline+rLP2086
------------------	-----------------------

Arm description:

Randomized to receive Saline on 0-- month, rLP2086 vaccine on a 0--, 2--, 6-- month schedule, MCV4 and Tdap vaccine on 7-- month.

Arm type	Placebo
Investigational medicinal product name	Saline
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Randomized to receive saline intramuscularly into the upper deltoid muscle of the left arm on 0- month.

Investigational medicinal product name	rLP2086 vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Randomized to receive MnB rLP2086 vaccine intramuscularly into the upper deltoid muscle of the left arm on a 0--, 2--, 6-- month schedule.

Investigational medicinal product name	MCV4 vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Randomized to receive MCV4 vaccine intramuscularly into the upper deltoid muscle of the right arm on 7-- month.

Investigational medicinal product name	Tdap vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Randomized to receive Tdap vaccine intramuscularly into the upper deltoid muscle of the right arm on 7-month.

Primary: Geometric Mean Concentrations (GMC) for Diphtheria and Tetanus Antigens

End point title	Geometric Mean Concentrations (GMC) for Diphtheria and Tetanus Antigens ^[1]
End point description: Antibody GMCs of 2 antigens of diphtheria and tetanus toxoid were computed in International Units per milliliter (IU/mL) along with corresponding 2-sided 95 percent (%) confidence intervals (CIs). Post vaccination 1 evaluable immunogenicity population: eligible subjects randomized to Group 1 or 2, received scheduled investigational product, had pre and post vaccination blood drawn at pre-specified time points, had valid, determinate assay results for proposed analysis, received no prohibited vaccines, no other major protocol violations.	
End point type	Primary
End point timeframe: 1 Month after Vaccination 1	

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification:

GMC for Diphtheria and Tetanus antigens was analyzed for subjects in reporting arms MCV4+Tdap+rLP2086 and MCV4+Tdap+Saline only.

End point values	MCV4+Tdap+rLP2086	MCV4 + Tdap + Saline		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	778 ^[2]	780 ^[3]		
Units: IU/mL				
geometric mean (confidence interval 95%)				
Diphtheria	9.3 (8.67 to 9.92)	9.8 (9.23 to 10.51)		
Tetanus	9.4 (8.95 to 9.98)	10.3 (9.75 to 10.85)		

Notes:

[2] - Subjects with valid and determinate assay results for given antigen.

[3] - Subjects with valid and determinate assay results for given antigen.

Statistical analyses

Statistical analysis title	Diphtheria
Statistical analysis description:	
CIs for GMC ratio were back transformations of a confidence interval based on the Student t distribution for the mean difference of the logarithms of the measures (Group 1 - Group 2 for Diphtheria antigens).	
Comparison groups	MCV4+Tdap+rLP2086 v MCV4 + Tdap + Saline
Number of subjects included in analysis	1558
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[4]
Parameter estimate	GMC ratio
Point estimate	0.94
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.86
upper limit	1.03
Notes:	
[4] - The non--inferiority criteria margin was 1.5--fold and statistical inference was based on the CIs of the GMC ratios. Non-inferiority was achieved when the lower limit of the 2--sided 95% CI for the GMC ratios after vaccination 1 was greater than 0.67.	

Statistical analysis title	Tetanus
Statistical analysis description:	
CIs for GMC ratio were back transformations of a confidence interval based on the Student t distribution for the mean difference of the logarithms of the measures (Group 1 - Group 2 for Tetanus antigens).	
Comparison groups	MCV4+Tdap+rLP2086 v MCV4 + Tdap + Saline
Number of subjects included in analysis	1558
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[5]
Parameter estimate	GMC ratio
Point estimate	0.92
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.85
upper limit	0.99
Notes:	
[5] - The non--inferiority criteria margin was 1.5--fold and statistical inference was based on the CIs of the GMC ratios. Non-inferiority was achieved when the lower limit of the 2--sided 95% CI for the GMC ratios after vaccination 1 was greater than 0.67.	

Primary: Geometric Mean Concentrations (GMC) for Acellular Pertussis Antigens

End point title	Geometric Mean Concentrations (GMC) for Acellular Pertussis Antigens ^[6]
End point description:	
Antibody GMCs of 4 acellular pertussis antigens (pertussis toxoid, pertussis filamentous hemagglutinin, pertussis pertactin and pertussis fimbrial agglutinogens types 2+3) were computed in Enzyme--linked immunosorbent assay (ELISA) units per milliliter (EU/mL) along with corresponding 2 sided 95% CIs. Post vaccination 1 evaluable immunogenicity population.	
End point type	Primary
End point timeframe:	
1 Month after Vaccination 1	

Notes:

[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification:

GMC for Acellular Pertussis antigens was analyzed for subjects in reporting arms MCV4+Tdap+rLP2086 and MCV4+Tdap+Saline only.

End point values	MCV4+Tdap+rLP2086	MCV4 + Tdap + Saline		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	778 ^[7]	780 ^[8]		
Units: EU/mL				
geometric mean (confidence interval 95%)				
Pertussis toxoid	13.2 (12.35 to 14.14)	14.2 (13.28 to 15.2)		
Pertussis filamentous hemagglutinin	112 (106.15 to 118.14)	122.9 (116.42 to 129.84)		
Pertussis pertactin	202 (187.77 to 217.25)	228.9 (212.72 to 246.35)		
Pertussis fimbrial agglutinogens types 2 +3	138.1 (121.2 to 157.33)	154.2 (135.3 to 175.79)		

Notes:

[7] - Subjects with valid and determinate assay results for given antigen.

[8] - Subjects with valid and determinate assay results for given antigen.

Statistical analyses

Statistical analyses

Statistical analysis title	PMB80 [A22]
-----------------------------------	-------------

Statistical analysis description:

CIs for GMT ratio were back transformations of a confidence interval based on the Student t distribution for the mean difference of the logarithms of the measures (Group 1 -- Group 2 for hSBA strain titers).

Comparison groups	MCV4+Tdap+rLP2086 v Saline+Saline+rLP2086
Number of subjects included in analysis	1362
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[21]
Parameter estimate	GMT ratio
Point estimate	0.92
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.84
upper limit	1.02

Notes:

[21] - The non--inferiority criteria margin was 1.5--fold and statistical inference was based on the CIs of the GMT ratios. Non-inferiority was achieved when the lower limit of the 2--sided 95%CI for the GMT ratios after vaccination 1 was greater than 0.67.

Statistical analysis title	PMB2948 [B24]
-----------------------------------	---------------

Statistical analysis description:

CIs for GMT ratio were back transformations of a confidence interval based on the Student t distribution for the mean difference of the logarithms of the measures (Group 1 -- Group 2 for hSBA strain titers).

Comparison groups	MCV4+Tdap+rLP2086 v Saline+Saline+rLP2086
Number of subjects included in analysis	1362
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[22]
Parameter estimate	GMT ratio
Point estimate	0.9
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.82
upper limit	1

Notes:

[22] - The non--inferiority criteria margin was 1.5--fold and statistical inference was based on the CIs of the GMT ratios. Non-inferiority was achieved when the lower limit of the 2--sided 95%CI for the GMT ratios after vaccination 1 was greater than 0.67.

Secondary: Percentage of Subjects With Seroresponse for Tetanus, Diphtheria and Acellular Pertussis (Tdap) and Meningococcal Conjugate Vaccine (MCV4) Antigens

End point title	Percentage of Subjects With Seroresponse for Tetanus, Diphtheria and Acellular Pertussis (Tdap) and Meningococcal
-----------------	-------------------------------------------------------------------------------------------------------------------

End point description:

Seroconversion rate for Tdap antigens was greater than or equal to (\geq) 4-, 2-fold rise in antibody concentration, if prevaccination antibody concentration was less than or equal to (\leq), greater than ($>$) cutoff value, respectively. For MCV4 antigens \geq 4- fold rise on serum bactericidal assay using rabbit complement (rSBA) titers, postdose rSBA titers $\geq 2 \times$ LLOQ if baseline value \geq , less than ($<$) lower limit of quantitation (LLOQ), respectively. Cutoff value=0.1 IU/mL for diphtheria and tetanus, 0.9, 2.9, 3.0, 10.6 EU/mL for pertussis toxoid, filamentous hemagglutinin, pertactin, fimbriae agglutinogens types 2 + 3, respectively. Post vaccination 1 evaluable immunogenicity population. Here, 'N' signifies subjects with seroresponse.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs: recorded from signing of informed consent form (ICF) to completion of study. SAEs: recorded from signing of ICF to 196 days of follow up period. Subject recorded pre-specified AEs in electronic diary (up to 7 days after vaccination)

Adverse event reporting additional description:

SAEs and AEs were grouped by system organ class and preferred term. AEs included AEs collected in the electronic diary (local and systemic reactions; systematic assessment) and AEs collected on the case report form at each visit (nonsystematic assessment).

Assessment type	Non-systematic

Reporting groups

Reporting group title	MCV4+Tdap+rLP2086
-----------------------	-------------------

Reporting group description:

Randomized to receive MCV4 and Tdap vaccine on 0-- month, MnB rLP2086 vaccine on a 0--, 2--, 6-- month schedule.

Reporting group title	Saline+Saline+rLP2086
-----------------------	-----------------------

Reporting group description:

Randomized to receive Saline on 0-- month, rLP2086 vaccine on a 0--, 2--, 6-- month schedule, MCV4 and Tdap vaccine on 7-- month.

Reporting group title	MCV4 + Tdap + Saline
-----------------------	----------------------

Reporting group description:

Randomized to receive MCV4 and Tdap vaccine on 0-- month, Saline on a 0--, 2--, 6-- month schedule.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 September 2012	Age range was changed from 10 to 25 years. An exclusion criterion related to allergen immunotherapy, instruction to record concomitant allergen immunotherapy in addition to non-study vaccination, reminder that the time of onset will be recorded for any AEs occurring on the same day of investigational product administration were added. Updated inclusion criteria and Lifestyle Guidelines to reflect new template text regarding contraception and classification of women of childbearing potential. Clarified exclusion criterion related to use of chronic systemic steroids. Additional safety reporting requirements were included.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
