Notes:

**Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 October 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	25 June 2021
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

Demonstrate superior analgesic efficacy of tanezumab 20 mg SC versus matching placebo SC at Week 8 in subjects, with cancer pain predominantly due to bone metastasis, receiving background opioid therapy.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trials subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 October 2015
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 1
Country: Number of subjects enrolled	Poland: 50
Country: Number of subjects enrolled	Argentina: 1
Country: Number of subjects enrolled	Australia: 1
Country: Number of subjects enrolled	Brazil: 7
Country: Number of subjects enrolled	Chile: 6
Country: Number of subjects enrolled	China: 17
Country: Number of subjects enrolled	Japan: 11
Country: Number of subjects enrolled	Korea, Republic of: 7
Country: Number of subjects enrolled	Czechia: 1
Country: Number of subjects enrolled	Romania: 22
Country: Number of subjects enrolled	Spain: 5
Country: Number of subjects enrolled	Hungary: 4
Country: Number of subjects enrolled	Slovakia: 17
Country: Number of subjects enrolled	United Kingdom: 5
Worldwide total number of subjects	155
EEA total number of subjects	100

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	96
From 65 to 84 years	59
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Subjects with cancer pain mainly due to bone metastasis, receiving background opioid therapy, randomised to 3 treatment arms: tanezumab 20 milligrams (mg), 10 mg, placebo. After study start, 10 mg arm discontinued (protocol amendment 3) no new subjects enrolled in this arm. Existing subjects in arm received 20 mg for remaining doses and included in 10/20 mg arm.

### Pre-assignment

Screening details:

Total 325 subjects signed the informed consent form (ICF). Out of which 158 subjects were screen failures, and 11 subjects were screened but not enrolled and randomised into the study. Total of 156 subjects were enrolled and randomised into the study and assigned to study treatments.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Assessor, Subject

### Arms

Are arms mutually exclusive? Yes

**Arm title** Placebo

Arm description:

Subjects received placebo matched to tanezumab subcutaneous (SC) once every 8 weeks for 24 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo (Tanezumab)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo matched to Tanezumab was administered via SC injection once every 8 weeks for 24 weeks. All subjects received 1 mL of study medication administered as a SC injection. Administered in the abdomen or anterior aspect of the thigh.

**Arm title** Tanezumab 10 mg

Arm description:

Subjects in this discontinued treatment arm, received tanezumab 10 mg SC once every 8 weeks before protocol amendment 3 and completed their treatment before the amendment.

Arm type	Experimental
Investigational medicinal product name	Tanezumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received Tanezumab 10 mg/mL, SC once every 8 weeks before protocol amendment 3 and completed their treatment before the amendment. Administered in the abdomen or anterior aspect of the thigh.

**Arm title** Tanezumab 10/20 mg

Arm description:

Subjects in this treatment group had received tanezumab 10 mg SC once every 8 weeks before protocol

amendment 3 and after the amendment they continued remaining treatment with tanezumab 20 mg SC once every 8 weeks.

Arm type	Experimental
Investigational medicinal product name	Tanezumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received tanezumab 10 mg/ml SC, once every 8 weeks before protocol amendment 3 and after the amendment they continued remaining treatment with tanezumab 20 mg SC once every 8 weeks. Administered in the abdomen or anterior aspect of the thigh.

<b>Arm title</b>	Tanezumab 20 mg

**Secondary: Change From Baseline in the Daily Average Pain Intensity NRS score in the Non-Index Visceral Cancer Pain Sites at Weeks 1, 2, 4, 6, 8, 12, 16 and 24**

End point title	Change From Baseline in the Daily Average Pain Intensity NRS score in the Non-Index Visceral Cancer Pain Sites at Weeks 1, 2, 4, 6, 8, 12, 16 and 24
-----------------	--

End point description:

Daily avg pain intensity in the non-index visceral cancer pain site was assessed by participants on an 11 point pain intensity NRS ranging from 0 (no pain) to 10 (worst possible pain), where higher scores signified more severity of pain. The subjects described their pain at the painful site during the past 24 hours by choosing the appropriate number from 0 to 10 on IRT diaries. Baseline is defined as the mean average daily pain intensity NRS score during the baseline assessment period prior to randomisation. The Weeks 1, 2, 4, 6, 8, 12, 16 and 24 pain intensity value is the mean of the daily avg pain intensity scores for the 7 days prior to each specified week. Subject with non-index visceral cancer pain sites were less than 10, hence data was not collected and analysis was not performed for this end point.

End point type	Secondary

**Secondary: Number of Subjects With Reduction of  $\geq 30, 50, 70$  and  $90\%$  From Baseline in Daily Worst Pain Intensity NRS Score in the Index Bone Metastasis Cancer Pain Site at Weeks 1, 2, 4, 6, 8, 12, 16 and 24**

End point title	Number of Subjects With Reduction of $\geq 30, 50, 70$ and $90\%$ From Baseline in Daily Worst Pain Intensity NRS Score in the Index Bone Metastasis Cancer Pain Site at Weeks 1, 2, 4, 6, 8, 12, 16 and 24
-----------------	---

End point description:

Daily worst pain intensity in index bone metastasis cancer pain site assessed by subjects: 11 point pain intensity NRS. Range: 0 (no pain) to 10 (worst possible pain), higher scores = more severe pain. Subjects recorded daily worst pain at painful site during past 24 hours by choosing appropriate number from 0 to 10 on IRT diaries. Wk 1, 2, 4, 6, 8, 12, 16 and 24 pain intensity value = mean of the daily worst pain intensity NRS scores for the 7 days prior to each wk. Number of subjects with cumulative reduction of

>= 30,50,70,90 % in daily worst pain intensity NRS score in the index bone metastasis cancer pain site from Baseline to Wk 1, 2, 4, 6, 8, 12, 16 and 24 were reported. Subjects might be reported more than once in the specified rows for a time point. Rows with only non-zero data for cumulative reduction at specified time points, for at least 1 reporting arm, are reported below. Here, 'N': subjects evaluable for this end point and 'n': subjects evaluable at specific time points.

### Secondary: Change From Baseline in Subjects Global Assessment of Cancer Pain (PGA-CP) at Weeks 2, 4, 8, 16 and 24

End point title	Change From Baseline in Subjects Global Assessment of Cancer Pain (PGA-CP) at Weeks 2, 4, 8, 16 and 24
-----------------	--

End point description:

Subjects at specified time points were asked: "Considering all ways your cancer pain affects you, how are you doing today?" on a Likert scale range: 1 to 5, on IRT diaries. Scores: 1=very good (asymptomatic and no limitation of normal activities); 2=good (mild symptoms and no limitation of normal activities); 3= fair (moderate symptoms and limitation of some normal activities); 4= poor (severe symptoms, inability to carry out most normal activities); 5=very poor (very severe symptoms which are intolerable and inability to carry out all normal activities). Higher scores: worsening of condition. mITT set analysed. Multiple imputation applied. 99999= summarised data not available. Individual values at wk 2,4,8,16,24 for 10mg: 0, 0, -3, 0, -2, 1, 0, -1, -1, 0, 1, 0, 0, -3, 1, 0, 0, -1, -1, 0, -1, 0, -3, 1, 0, -1, -1, -2, 0, -3, 1, 0, -1, -1, 0, -3, 1, 2, -1; for 10/20 mg: 1, 0, 1 respectively. 99999=no subjects analysed. N: subjects evaluable for endpoint. n: subjects evaluable at specified time points.

**Secondary: Change From Baseline in BPI-sf Pain Interference With Enjoyment of Life at Weeks 2, 4, 8, 16 and 24**

End point title	Change From Baseline in BPI-sf Pain Interference With Enjoyment of Life at Weeks 2, 4, 8, 16 and 24
-----------------	---

End point description:

BPI-sf was a self-administered questionnaire used to assess the severity of pain and the impact of pain on daily functions during a 24 hour period prior to evaluation at specified/scheduled time points. Subjects recorded a score from range 0 (dose not interfere) to 10 (completely interfere) on IRT diaries, which best described their pain interference with enjoyment of life in the last 24 hours at specified time points. Higher scores signified more interference. mITT set analyzed. Multiple imputation applied. 99999: summarised data not available. Individual values at wk 2,4,8,16,24 for 10 mg: 0, -3, -5, -5, -2, -6, -2, -2 -2, -1, -2, 0, -8, -3, -5, -2, 0,-2, -1, -5, -2, -8, -3, -5, -3, -1,-3, -5, -2, -3, -5, -3,-4, -6, -3, -3, -6, 4,-4; for 10/20mg: 5,5,6 respectively. 99999=no subjects were analysed. N:subjects evaluable for endpoint. n:subjects evaluable at specified time points.

### **Secondary: Change From Baseline in BPI-sf Pain Interference With Normal Work at Weeks 2, 4, 8, 16 and 24**

End point title	Change From Baseline in BPI-sf Pain Interference With Normal Work at Weeks 2, 4, 8, 16 and 24
-----------------	---

End point description:

BPI-sf was a self-administered questionnaire used to assess the severity of pain and the impact of pain on daily functions during a 24 hour period prior to evaluation at specified/scheduled time points. Subjects recorded a score from range 0 (dose not interfere) to 10 (completely interfere) on IRT diaries, which best described their pain interference with normal work in the last 24 hours at specified time

points. Higher scores signified more interference. mITT set analysed. Multiple imputation applied. 99999: summarised data not available. Individual values at wk 2,4,8,16,24 for 10 mg: 1, 1, -8, 0, -5, -4, -2, -2,-5, 0, 0, -2, -1, -5, -4, -2, -3, -2, 0, -1, 2, -4, -7, -4, -2, -1,-3, -4, 0, -3, -4, -3, -4, -3, 0, -7, -5, 4,-4; for 10/20mg: 1,1,2 respectively. 99999=no subjects were analysed. N:subjects evaluable for endpoint. n:subjects evaluable at specified time points.

### Secondary: Number of Subjects With Responses to Mobility Dimension of EuroQol 5 Dimension 5 Level (EQ-5D-5L) Scale at Baseline, Weeks 8, 16 and 24

End point title	Number of Subjects With Responses to Mobility Dimension of EuroQol 5 Dimension 5 Level (EQ-5D-5L) Scale at Baseline, Weeks 8, 16 and 24
-----------------	---

End point description:

EQ-5D-5L is a standardised subject completed questionnaire that measures health-related quality of life and translates that score into an index value or utility score. EQ-5D-5L consists of two components: a health state profile and an optional visual analogue scale (VAS). EQ-5D health state profile is comprised of 5 dimensions: mobility, self-care, usual activities, pain/discomfort and anxiety/depression. Each dimension has 5 levels: 1= no problems, 2= slight problems, 3= moderate problems, 4= severe problems, and 5= extreme problems. Higher scores indicated greater levels of problems across each of the five dimensions. mITT analysis set was analysed. Multiple imputation method was applied. Here, 'N': subjects evaluable for this end point, 'n': subjects evaluable at specified time points.

### Secondary: Number of Subjects With Treatment-Emergent Adverse Events (TEAEs)

End point title	Number of Subjects With Treatment-Emergent Adverse Events (TEAEs)
-----------------	---

End point description:

An adverse event (AE) was any untoward medical occurrence in a subject who received study drug without regard to possibility of causal relationship. Serious adverse event (SAE) was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalisation; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. Treatment-emergent were events between first dose of study drug and up to 24 weeks post last dose that were absent before treatment or that worsened relative to pretreatment state. AEs included both serious and all non-serious AEs. Subjects were followed up to 24 weeks after study drug last dose. The safety analysis set was defined as all subjects treated with tanezumab or placebo SC, including subjects who received tanezumab 10 mg prior to protocol amendment 3.

End point type	Secondary
----------------	-----------

End point timeframe:

Day 1 of dosing up to 24 weeks post last dose (maximum up to Week 48)

## Secondary: Number of Subjects with Confirmed Orthostatic Hypotension

End point title	Number of Subjects with Confirmed Orthostatic Hypotension
-----------------	---

End point description:

Orthostatic hypotension was defined as postural change (supine to standing) that met the following criteria: for systolic blood pressure (BP) less than or equal to ( $\leq$ ) 150 millimeter of mercury (mmHg) (mean supine): reduction in systolic BP  $\geq 20$  mmHg or reduction in diastolic BP  $\geq 10$  mmHg at the 1 and/or 3 minute standing BP measurements. For systolic BP greater than ( $>$ ) 150 mmHg (mean supine): reduction in systolic BP  $\geq 30$  mmHg or reduction in diastolic BP  $\geq 15$  mmHg at the 1 and/or 3 minute standing BP measurements. If the 1 minute or 3 minute standing BP in a sequence met the orthostatic hypotension criteria, then that sequence was considered positive. If 2 of 2 or 2 of 3 sequences were positive, then orthostatic hypotension was considered confirmed. Safety analysis set: all

subjects treated with tanezumab or placebo SC, including subjects received tanezumab 10 mg prior to protocol amendment 3. N:subjects evaluable for endpoint.

**Secondary: Number of Subjects According to Type of Change From Baseline in Neuropathy Impairment Score (NIS) at Weeks 2, 4, 8, 12, 16, 24 and 40**

End point title	Number of Subjects According to Type of Change From Baseline in Neuropathy Impairment Score (NIS) at Weeks 2, 4, 8, 12, 16, 24 and 40
-----------------	---

## End point description:

NIS is a standardised instrument used to evaluate subjects for signs of peripheral neuropathy. NIS is the sum of scores of 37 items, from both the left and right side, where 24 items scored from 0 (normal) to 4 (paralysis), higher score indicated higher abnormality/impairment and 13 items scored from 0 (normal), 1 (decreased) and 2 (absent), higher score indicated higher impairment. NIS possible overall score ranged from 0 (no impairment) to 244 (maximum impairment), higher scores indicated increased impairment. In this outcome measure number of subjects were reported in 3 categories at each specified time points. Categories were: 1) worsened = when change from baseline in NIS score was less than zero; 2) no change; 3) improved = when change from baseline in NIS score was greater than zero. Change from baseline in NIS was analyzed using Cochran-Mantel-Haenszel test. mITT analysis set analysed. LOCF data applied. N:subjects evaluable for endpoint.

### Secondary: Change From Screening in Mean Total Symptom Impact Score as Per Survey of Autonomic Symptoms (SAS) at Week 24, 48, Early Termination Visit 1 and 3

End point title	Change From Screening in Mean Total Symptom Impact Score as Per Survey of Autonomic Symptoms (SAS) at Week 24, 48, Early Termination Visit 1 and 3
-----------------	--

#### End point description:

The SAS is a 12 item (11 for females) questionnaire, from which the total number of symptoms (0-12 for males and 0-11 for females) is calculated. Each positive symptom is rated on 5 point scale (1 [least sever impact] to 5 [most severe impact]); higher scores = more severe impact of symptoms. The total impact score was the sum of all symptom rating scores, with 0 assigned where the subject did not have the particular symptom. The range for males =12 (no impact) to 60 (extreme impact); females =11 (no impact) to 55 (extreme impact); higher scores = more severe impact of symptoms on subjects well-being. Subjects discontinuing from study treatment before Week 24 had early termination visits. mITT analysis set analysed. 99999= no subjects were analysed. N:subjects evaluable for endpoint. n:subjects evaluable at specified time points.

End point type	Secondary

### Statistical analyses

No statistical analyses for this end point

### Secondary: Number of Subjects With Anti-Drug Antibodies (ADA) and Neutralising Anti-Drug Antibodies (NAb)

End point title	Number of Subjects With Anti-Drug Antibodies (ADA) and Neutralising Anti-Drug Antibodies (NAb)
End point description:	Human serum ADA samples were analysed for the presence or absence of anti-tanezumab antibodies by using a semi quantitative enzyme linked immunosorbent assay (ELISA). Number of subjects with presence of anti-tanezumab antibodies and neutralising anti-drug antibodies are reported. The safety analysis set included all subjects treated with tanezumab or placebo SC, including subjects who received tanezumab 10 mg prior to protocol amendment 3.
End point type	Secondary
End point timeframe:	Baseline (Day 1, before dosing) up to Week 48

<b>End point values</b>	Placebo	Tanezumab 10 mg	Tanezumab 10/20 mg	Tanezumab 20 mg

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Day 1 of dosing up to 24 weeks post last dose (maximum up to Week 48)

Adverse event reporting additional description:

Same event may appear as AE and SAE, what is presented are distinct events. Event may be categorised as serious in 1 subject and as non-serious in another subject or 1 subject may have experienced both serious and non-serious event during study. Safety analysis set was evaluated.

Assessment type	Non-systematic

### Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Subjects received placebo matched to tanezumab SC once every 8 weeks for 24 weeks.

Reporting group title	Tanezumab 20 mg
-----------------------	-----------------

Reporting group description:

Subjects received tanezumab 20 mg SC once every 8 weeks for 24 weeks.

Reporting group title	Tanezumab 10/20 mg
-----------------------	--------------------

Reporting group description:

Subjects in this treatment group had received tanezumab 10 mg SC once every 8 weeks before protocol amendment 3 and after the amendment they continued remaining treatment with tanezumab 20 mg SC once every 8 weeks.

Reporting group title	Tanezumab 10 mg
-----------------------	-----------------

Reporting group description:

Subjects in this discontinued treatment arm, received tanezumab 10 mg SC once every 8 weeks before protocol amendment 3 and completed their treatment before the amendment.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 February 2017	To provide background and rationale for key changes

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
