

Clinical trial results:

A randomized, double-blind, placebo-controlled, parallel group study to determine the efficacy, the duration of action, and safety of latanoprost in patients with Menière's disease

Summary

EudraCT number	2013-002261-18
Trial protocol	SE
Global end of trial date	28 April 2016

Results information

Result version number	v1 (current)
This version publication date	19 May 2017
First version publication date	19 May 2017

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 June 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	28 April 2016
Global end of trial reached?	Yes
Global end of trial date	28 April 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective is to determine the efficacy and duration of action of latanoprost as treatment of Menière's disease

Protection of trial subjects:

Patients were observed in the clinics during the study visits. Physical examination was performed at screening. Vital signs were taken at screening, baseline and end of study. Adverse events were registered from baseline until the last visit. Concomitant medications were collected and reviewed throughout the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 August 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Sweden: 100
Worldwide total number of subjects	100
EEA total number of subjects	100

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	73
From 65 to 84 years	27
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Patients were recruited at 12 centers across Sweden. Patients with definite unilateral Menière's disease with an active vertigo component were included in the study. First patient in was 16 October 2013 and last patient last visit was 28 April 2016.

Pre-assignment

Screening details:

The study population was adults aged 18 or above with definite unilateral Menière's disease. Patients had to have a reduction in hearing. Furthermore patients had to have experience of vertigo attacks and tinnitus during the last three months.

A 4-6 weeks run-in period was used in order to obtain accurate baseline values.

Pre-assignment period milestones

Number of subjects started	249 ^[1]
Number of subjects completed	100

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Protocol deviation: 9
Reason: Number of subjects	Patient's non-compliance/ protocol violation: 3
Reason: Number of subjects	Lost to follow-up: 1
Reason: Number of subjects	Inclusion criteria not met: 136

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Denotes the number of patients (249) entering the screening/run-in period.

Of these 249 patients 100 were enrolled/randomized to receive treatment.

Period 1

Period 1 title	Outcome of randomization
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Latanoprost 1 injection

Arm description:

In this arm patients were randomized to one injection of latanoprost.

Arm type	Experimental
Investigational medicinal product name	Latanoprost
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intratympanic use

Dosage and administration details:

The study drug contained 0.005% latanoprost (13,14-dihydro-17-phenyl-18,19,20-trinor-PGF2 α -isopropyl ester) dissolved in phosphate buffered saline. The dose was 0.4-1.0 ml.

Arm title	Placebo 1 injection
-----------	---------------------

Arm description:

In this arm patients were randomized to one injection of placebo.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intratympanic use

Dosage and administration details:

The placebo consisted of phosphate buffered saline.

The dose was 0.4-1.0 ml.

Arm title	Latanoprost 3 injections
------------------	--------------------------

Arm description:

In this arm patients were randomized to three injections of latanoprost.

Arm type	Experimental
Investigational medicinal product name	Latanoprost
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intratympanic use

Dosage and administration details:

The study drug contained 0.005% latanoprost (13,14-dihydro-17-phenyl-18,19,20-trinor-PGF2 α -isopropyl ester) dissolved in phosphate buffered saline. The daily dose was 0.4-1.0 ml.

Arm title	Placebo 3 injections
------------------	----------------------

Arm description:

In this arm patients were randomized to three injections of placebo.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intratympanic use

Dosage and administration details:

The placebo consisted of phosphate buffered saline.

The daily dose was 0.4-1.0 ml.

Primary: Speech discrimination in noise Visit 3

End point title	Speech discrimination in noise Visit 3
-----------------	--

End point description:

Change in speech discrimination in noise (ISO 8253-3) from Baseline (Day 1) to Day 14.

At Baseline (Visit 2a/Day 1) speech discrimination in noise was measured (50 Swedish PB words) using a speech weighted noise, S/N = 4, where the signal is adjusted to each patient's most comfortable level. This signal level is to be applied at all subsequent measurements.

The endpoint is measured in percentage (%). A positive score in change from baseline means an improvement in hearing.

End point type	Primary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were recorded from baseline (Day 1) until last the last visit for each subject.

Adverse event reporting additional description:

All adverse events, whether volunteered by the subject, discovered by Investigator questioning, or detected through physical examination, laboratory test or other means was documented.

Assessment type	Systematic

Reporting groups

Reporting group title	Latanoprost 1 injection
-----------------------	-------------------------

Reporting group description:

In this arm patients were randomized to one injection of latanoprost.

Reporting group title	Placebo 1 injection
-----------------------	---------------------

Reporting group description:

In this arm patients were randomized to one injection of placebo.

The placebo consisted of phosphate buffered saline.

Reporting group title	Latanoprost 3 injections
-----------------------	--------------------------

Reporting group description:

In this arm patients were randomized to three injections of latanoprost.

Reporting group title	Placebo 3 injections
-----------------------	----------------------

Reporting group description:

In this arm patients were randomized to three injections of placebo.

The placebo consisted of phosphate buffered saline.
