

## Clinical trial results:

### **A Phase II, Randomized, Multi-center, Parallel-group, Rater-blinded Study to Evaluate the Efficacy, Safety and Tolerability of 0.5 mg, 3 mg, 10 mg and 20 mg Plovamer Acetate Doses Compared to Copaxone in Patients with Relapsing Remitting Multiple Sclerosis**

Due to the EudraCT – Results system being out of service between 31 July 2015 and 12 January 2016, these results have been published in compliance with revised timelines.

#### Summary

EudraCT number	2013-002283-25
Trial protocol	CZ HU IT GB FI GR ES BG PL HR
Global end of trial date	03 March 2015

#### Results information

Result version number	v1 (current)
This version publication date	10 July 2016
First version publication date	10 July 2016

#### Trial information

##### Trial identification

Sponsor protocol code	EMR200575-001

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 March 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	03 March 2015
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

This was a Phase 2, randomized, rater-blinded, 5-arm, parallel-group trial that had 4 doses of plovamer acetate against the active comparator Copaxone in subjects with Relapsing Remitting Multiple Sclerosis (RRMS). The trial was conducted on an outpatient basis for minimum treatment duration of 40 weeks.

Protection of trial subjects:

Subject protection was ensured by following high medical and ethical standards in accordance with the principles laid down in the Declaration of Helsinki, and that are consistent with Good Clinical Practice and applicable regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 February 2014
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	4 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Bulgaria: 47
Country: Number of subjects enrolled	Czech Republic: 63
Country: Number of subjects enrolled	Spain: 3
Country: Number of subjects enrolled	Croatia: 27
Country: Number of subjects enrolled	Hungary: 6
Country: Number of subjects enrolled	Italy: 8
Country: Number of subjects enrolled	Mexico: 1
Country: Number of subjects enrolled	Poland: 32
Country: Number of subjects enrolled	Serbia: 17
Country: Number of subjects enrolled	Turkey: 1
Country: Number of subjects enrolled	Ukraine: 19
Country: Number of subjects enrolled	United States: 25
Country: Number of subjects enrolled	South Africa: 6
Worldwide total number of subjects	255
EEA total number of subjects	186

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	255
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Of the 550 patients planned for enrollment, a total of 255 subjects were randomized and 254 were included in safety analysis set.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Subject

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Plovamer acetate 0.5 milligram (mg)

Arm description:

Plovamer acetate was administered at a dose of 0.5 mg as weekly subcutaneous injection for 40 weeks up to a maximum of 14 months.

Arm type	Experimental
Investigational medicinal product name	Plovamer acetate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Plovamer acetate was administered at a dose of 0.5 mg as subcutaneous injection.

<b>Arm title</b>	Plovamer acetate 3 mg
------------------	-----------------------

Arm description:

Plovamer acetate was administered at a dose of 3 mg as weekly subcutaneous injection for 40 weeks up to a maximum of 14 months.

Arm type	Experimental
Investigational medicinal product name	Plovamer acetate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Plovamer acetate was administered at a dose of 3 mg as subcutaneous injection.

<b>Arm title</b>	Plovamer acetate 10 mg
------------------	------------------------

Arm description:

Plovamer acetate was administered at a dose of 10 mg as weekly subcutaneous injection for 40 weeks up to a maximum of 14 months.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Plovamer acetate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use
Dosage and administration details:	
Plovamer acetate was administered at a dose of 10 mg as subcutaneous injection.	
<b>Arm title</b>	Plovamer acetate 20 mg

Arm description:

Plovamer acetate was administered as two subcutaneous injection of 10 mg weekly for 40 weeks up to a maximum of 14 months.

Arm type	Experimental
Investigational medicinal product name	Plovamer acetate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use
Dosage and administration details:	
Plovamer acetate was administered as two subcutaneous injection of 10 mg.	
<b>Arm title</b>	Copaxone 20 mg

Arm description:

Copaxone was administered at a dose of 20 mg as subcutaneous injection once daily for 40 weeks up to a maximum of 14 months.

Arm type	Active comparator
Investigational medicinal product name	Copaxone 20 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use
Dosage and administration details:	
Copaxone was administered at a dose of 20 mg as subcutaneous injection.	

<b>Number of subjects in period 1<sup>[1]</sup></b>	Plovamer acetate 0.5 milligram (mg)	Plovamer acetate 3 mg	Plovamer acetate 10 mg
Started	51	49	52
Safety Analysis Set	51	49	52
Completed	0	0	0
Not completed	51	49	52
Consent withdrawn by subject	3	2	1
Adverse event, non-fatal	1	1	3
Unspecified	47	46	48
Lack of efficacy	-	-	-
Protocol deviation	-	-	-

<b>Number of subjects in period 1<sup>[1]</sup></b>	Plovamer acetate 20 mg	Copaxone 20 mg
---	------------------------	----------------

Started	52	50
Safety Analysis Set	52	50
Completed	0	0
Not completed	52	50
Consent withdrawn by subject	1	2
Adverse event, non-fatal	4	3
Unspecified	45	45
Lack of efficacy	1	-
Protocol deviation	1	-

---

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: One subject in the Copaxone 20 mg arm was randomized but not treated due to withdrawal of consent.

## Baseline characteristics

### Reporting groups

Reporting group title	Plovamer acetate 0.5 milligram (mg)
Reporting group description: Plovamer acetate was administered at a dose of 0.5 mg as weekly subcutaneous injection for 40 weeks up to a maximum of 14 months.	
Reporting group title	Plovamer acetate 3 mg
Reporting group description: Plovamer acetate was administered at a dose of 3 mg as weekly subcutaneous injection for 40 weeks up to a maximum of 14 months.	
Reporting group title	Plovamer acetate 10 mg
Reporting group description: Plovamer acetate was administered at a dose of 10 mg as weekly subcutaneous injection for 40 weeks up to a maximum of 14 months.	
Reporting group title	Plovamer acetate 20 mg
Reporting group description: Plovamer acetate was administered as two subcutaneous injection of 10 mg weekly for 40 weeks up to a maximum of 14 months.	
Reporting group title	Copaxone 20 mg
Reporting group description: Copaxone was administered at a dose of 20 mg as subcutaneous injection once daily for 40 weeks up to a maximum of 14 months.	

Reporting group values	Plovamer acetate 0.5 milligram (mg)	Plovamer acetate 3 mg	Plovamer acetate 10 mg
Number of subjects	51	49	52
Age categorical Units: Subjects			

Age Continuous Units: years arithmetic mean standard deviation	39.2 ± 10.73	40.7 ± 9.54	41.1 ± 10.83

## End points

### End points reporting groups

Reporting group title	Plovamer acetate 0.5 milligram (mg)
Reporting group description: Plovamer acetate was administered at a dose of 0.5 mg as weekly subcutaneous injection for 40 weeks up to a maximum of 14 months.	
Reporting group title	Plovamer acetate 3 mg
Reporting group description: Plovamer acetate was administered at a dose of 3 mg as weekly subcutaneous injection for 40 weeks up to a maximum of 14 months.	
Reporting group title	Plovamer acetate 10 mg
Reporting group description: Plovamer acetate was administered at a dose of 10 mg as weekly subcutaneous injection for 40 weeks up to a maximum of 14 months.	
Reporting group title	Plovamer acetate 20 mg
Reporting group description: Plovamer acetate was administered as two subcutaneous injection of 10 mg weekly for 40 weeks up to a maximum of 14 months.	
Reporting group title	Copaxone 20 mg
Reporting group description: Copaxone was administered at a dose of 20 mg as subcutaneous injection once daily for 40 weeks up to a maximum of 14 months.	

### Primary: Mean Number of Time Constant 1 (T1) Gadolinium (Gd)-Enhancing Lesions per Subject and Scan

End point title	Mean Number of Time Constant 1 (T1) Gadolinium (Gd)-Enhancing Lesions per Subject and Scan <sup>[1]</sup>
End point description: Time Constant 1 (T1) Gadolinium (Gd)-Enhancing Lesions per Subject and Scan was calculated using 5 serial magnetic resonance imaging (MRI) scans. Intent to Treat (ITT) analysis set included all randomised subjects with at least 1 post-baseline efficacy (MRI) assessment. Here 'n' signifies those subjects who were evaluated for this measure at the specified time point for each arm group respectively and "99999" for standard deviation signifies data not reported as number of subject was 1 while for both arithmetic mean and standard deviation '99999' signifies data not applicable as there was no evaluable subject.	
End point type	Primary
End point timeframe: Baseline , Week 12, 24, 28, 32, 36, 40	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only the descriptive data was planned to be presented for the outcome measure.

## Statistical analyses

No statistical analyses for this end point

## Secondary: Mean Change From Baseline in Volume of T1 Gadolinium (Gd)-Enhancing Lesions per Subject and Scan

End point title	Mean Change From Baseline in Volume of T1 Gadolinium (Gd)-Enhancing Lesions per Subject and Scan
-----------------	--

End point description:

Change from baseline in volume of T1 Gd-enhancing lesions per subject was calculated using 5 Serial MRI Scans. ITT analysis set included all randomized subjects with at least 1 post-baseline efficacy (MRI) assessment. Here 'n' signifies those subjects who were evaluated for this measure at the specified time point for each arm group respectively and "99999" for standard deviation signifies data not reported as number of subject was 1 while for both arithmetic mean and standard deviation '99999' signifies data not applicable as there was no evaluable subject.

## Secondary: Time to First Relapse

End point title	Time to First Relapse
End point description:	Relapse was defined as new, worsening or recurrent neurological symptoms attributed to multiple sclerosis that last for at least 24 hours without fever or infection, or adverse reaction to prescribed medication, preceded by a stable or improving neurological status of at least 30 days. These new or worsening symptoms should be noted by the patient and must be accompanied by at least one of the following: An increase of greater than or equal to (>=) 1 grade in >=2 functional scales of the Expanded Disability Status Scale (EDSS) or an increase of >=2 grades in 1 functional scale of the EDSS or an increase of >= 0.5 or an increase of >=1.0 in EDSS if the previous EDSS was 0.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Baseline up to end of treatment (week 40)

Assessment type	Non-systematic
-----------------	----------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	18.0
--------------------	------

### Reporting groups

Reporting group title	Plovamer acetate 0.5 milligram (mg)
-----------------------	-------------------------------------

Reporting group description:

Plovamer acetate was administered at a dose of 0.5 mg as weekly subcutaneous injection for 40 weeks up to a maximum of 14 months.

Reporting group title	Plovamer acetate 3 mg
-----------------------	-----------------------

Reporting group description:

Plovamer acetate was administered at a dose of 3 mg as weekly subcutaneous injection for 40 weeks up to a maximum of 14 months.

Reporting group title	Plovamer acetate 10 mg
-----------------------	------------------------

Reporting group description:

Plovamer acetate was administered at a dose of 10 mg as weekly subcutaneous injection for 40 weeks up to a maximum of 14 months.

Reporting group title	Plovamer acetate 20 mg
-----------------------	------------------------

Reporting group description:

Plovamer acetate was administered as two subcutaneous injection of 10 mg weekly for 40 weeks up to a maximum of 14 months.

Reporting group title	Copaxone 20 mg
-----------------------	----------------

Reporting group description:

Copaxone was administered at a dose of 20 mg as subcutaneous injection once daily for 40 weeks up to a maximum of 14 months.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

---

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
29 October 2014	In late 2014, Merck KGaA made the business decision to discontinue the clinical development program of its investigational plovamer acetate therapy for multiple sclerosis. This decision was not related to any new safety or efficacy findings. The study was discontinued before all patients could be enrolled; of the 550 patients planned for enrollment, a total of 255 patients were randomized and 254 were included in the safety analysis set.	-

Notes:

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Based on Sponsor decision to discontinue the clinical development program of plovamer acetate therapy for multiple sclerosis the trial was prematurely terminated.

Notes:
