## General information about the trial

Main objective of the trial:

The purpose of this study is to evaluate the effect of two dosing regimens of benralizumab on asthma exacerbations in patients on high-dose ICS-LABA with uncontrolled asthma

Protection of trial subjects:

Data safety monitoring board (DSMB) evaluates cumulative safety and other clinical trial data at regular intervals and making appropriate recommendations based on the available data. The DSMB functions independently of all other individuals associated with the conduct of the studies, including the study sponsor, AstraZeneca. The committee operates in accordance with a DSMB charter.

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

1205 participants were randomised to receive treatment with benralizumab 30 mg Q4W, Q8W, or placebo. Of the 1205 patients randomised, 1204 (99.9%) patients received treatment with the study drug: 399 patients received benralizumab 30 mg Q4W, 398 patients received benralizumab 30 mg Q8W, and 407 patients received placebo.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind

#### End point description:

Asthma symptoms during night time and day time are recorded by the patient each morning and evening in the asthma daily diary. Baseline is defined as the average of data collected from the evening of study day -10 to the morning of study day 1. Each time point is calculated as bi-weekly means based on daily diary data. If more than 50% of scores are missing in a 14 day period then this is considered as missing. Symptom score lower is better. #### **End point description:**

Asthma symptoms during night time and day time are recorded by the patient each morning and evening in the asthma daily diary. Baseline is defined as the average of data collected from the evening of study day -10 to the morning of study day 1. Each time point is calculated as bi-weekly means based on daily diary data. If more than 50% of scores are missing in a 14 day period then this is considered as missing. Symptom score lower is better.
