Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 March 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	14 December 2015
Global end of trial reached?	Yes
Global end of trial date	14 December 2015
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

This is a safety and efficacy study of onabotulinumtoxinA in poststroke patients with upper limb spasticity.

Protection of trial subjects:

All study participants were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 May 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	United States: 52
Worldwide total number of subjects	53
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	41
From 65 to 84 years	12
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Each patient was screened for a period of up to 4 weeks prior to randomization.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	onabotulinumtoxinA 500U

Arm description:

OnabotulinumtoxinA 500U injected into predefined muscles of the study limb on Day 1.

Arm type	Experimental
Investigational medicinal product name	onabotulinumtoxinA
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

OnabotulinumtoxinA 500U injected into predefined muscles of the study limb on Day 1.

Arm title	onabotulinumtoxinA 300U
------------------	-------------------------

Arm description:

OnabotulinumtoxinA 300U injected into predefined muscles of the study limb on Day 1.

Arm type	Experimental
Investigational medicinal product name	onabotulinumtoxinA
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

OnabotulinumtoxinA 300U injected into predefined muscles of the study limb on Day 1.

Arm title	placebo (normal saline)
------------------	-------------------------

Arm description:

Placebo (normal saline) injected into predefined muscles of the study limb on Day 1.

Arm type	Placebo
Investigational medicinal product name	placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Placebo (normal saline) injected into predefined muscles of the study limb on Day 1.

Number of subjects in period 1	onabotulinumtoxinA 500U	onabotulinumtoxinA 300U	placebo (normal saline)
Started	17	18	18
Completed	17	18	18

Primary: Change from Baseline in the Modified Ashworth Scale-Bohannon (MAS-B) Score of Elbow Flexors Using a 6-Point Scale

End point title	Change from Baseline in the Modified Ashworth Scale-Bohannon (MAS-B) Score of Elbow Flexors Using a 6-Point Scale ^[1]
End point description: The MAS-B is a 6-point scale used to evaluate spasticity based on grading the resistance encountered in the elbow flexors by passively moving the elbow flexor muscles through their range of motion. The score ranges from 0 (no increase in muscle tone) to 4 (affected part(s) rigid in flexion or extension). Scores are converted to a 0 to 5 grade. A negative number change from baseline indicates an improvement and a positive number change from baseline indicates a worsening.	
End point type	Primary
End point timeframe: Baseline, Week 6	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: No statistical analysis is reported for this outcome measure.

No statistical analyses for this end point

Secondary: Change from Baseline in Pain on an 11-Point Scale

End point title

Change from Baseline in Pain on an 11-Point Scale

End point description:

The patient is asked to select a number that best describes his/her pain in the treated areas of the study limb on an 11-point scale from 0 = "no pain" to 10 = "pain as bad as can be imagined". Patients are instructed to recall their average pain in the study limb during the 48-hour period prior to the visit. Patients with a baseline pain score >0 are included in the analyses. A negative number change from baseline indicates an improvement and a positive number change from baseline indicates a worsening.

Secondary: Change from Baseline in the Dressing Domain Score on the Spasticity Impact Assessment-Upper Limb (SIA-UL)

End point title	Change from Baseline in the Dressing Domain Score on the Spasticity Impact Assessment-Upper Limb (SIA-UL)
-----------------	---

End point description:

The SIA-UL asks the patient to assess the impact of upper limb spasticity in his/her daily life on a 19-item scale. The scale covers impacts on activities of dressing, showering/bathing, and self-care. The SIA score ranged from 0 (not at all difficult) to 4 (extremely difficult) for each question. The dressing domain was calculated based on the average of 2 questions.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were recorded from signing the informed consent to the end of study (Week 16).

Adverse event reporting additional description:

The Safety Population included all enrolled patients who received a treatment injection. The Safety Population was used to assess adverse events and serious adverse events.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 April 2014	The pectoralis minor muscle was removed from the injection paradigm, and its associated dose and volume were reallocated to the pectoralis major muscle.
01 July 2014	Retreatment was removed as an option and the planned EU study sites were eliminated from the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
