Clinical trial results:
A Randomized, Double-Blind, Placebo-Controlled Phase 3 Study of IPI-145 in Combination with Rituximab vs Rituximab in Subjects with Previously-Treated Follicular Lymphoma

Summary

EudraCT number	2013-002406-31
Trial protocol	IT GB HU ES BE AT PL DE DK
Global end of trial date	05 October 2016

Results information

Result version number	v2 (current)
This version publication date	25 November 2023
First version publication date	19 October 2017
Version creation reason	• Correction of full data set Results contact info has changed.

Trial information

Trial identification

Sponsor protocol code	IPI-145-08

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	U1111-1158-1596
Other trial identifiers	IND Number: 112,486

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 December 2016
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	05 October 2016
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

to evaluate the efficacy of duvelisib (IPI-145) administered in combination with rituximab (D+R) vs placebo in combination with rituximab (PBO+R) in subjects with previously-treated CD20-positive follicular lymphoma (FL)

Protection of trial subjects:

Prior to screening for enrollment into the clinical trial, all patients were provided detailed information about the investigational product and the trial. During the informed consent process, patients were allowed to ask questions and have a conversation with the study staff providing consent. The informed consent form (ICF) included all elements required by ICH, GCP, and adhered to the IRB/IEC requirements and the ethical principles that have their origin in the Declaration of Helsinki. It was explained to patients during this conversation that they have the right to withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. The ICF was updated when important new information became available, and all patients still receiving treatment in the trial were re-consented on the new information.

During the trial, protection of trial subjects took the form of adverse event and concomitant medication monitoring, and disease response monitoring. Adverse events (AEs) were monitored from the time of signing the ICF. The Protocol provided information on what concomitant medication and therapies were either not allowed or should be used with caution. An assessment of these medications and therapies was performed at every clinic visit. Lastly, disease response assessments were performed according to the scheduled stipulated in the Protocol. If a study subject progressed, appropriate conversations were had with their study investigator to determine the best course of action for further treatment or management of their disease, outside of the clinical trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 March 2015
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	7 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 2
Country: Number of subjects enrolled	United States: 2
Country: Number of subjects enrolled	Australia: 1
Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Italy: 3
Country: Number of subjects enrolled	Poland: 3

Worldwide total number of subjects	13
EEA total number of subjects	9

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	6
From 65 to 84 years	7
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Screening will be performed ≤30 days from randomization.

Period 1

Period 1 title	Treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Duvelisib 25 mg BID and Rituximab

Arm description:

IPI-145 (25 mg BID) administered orally in 28-day continuous treatment cycles + IV infusion of rituximab (375 mg/m2) once weekly for 4 weeks during Cycle 1, then once on Day 1 of Cycles 4, 6, 8, and 10.

Arm type	Experimental
Investigational medicinal product name	Duvelisib
Investigational medicinal product code	IPI-145
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

The blinded study drug should be swallowed whole with a glass of water (approximately 8 ounces or 240 mL) at approximately the same time(s) each day.

Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Rituximab will be administered via infusion. Premedication consisting of an anti-pyretic and an antihistaminic should always be administered before each infusion of rituximab. Premedication with glucocorticoids should also be considered.

Arm title	Placebo and Rituximab

Arm description:

Matching Placebo administered orally in 28-day continuous treatment cycles + IV infusion of rituximab (375 mg/m2) once weekly for 4 weeks during Cycle 1, then once on Day 1 of Cycles 4, 6, 8, and 10.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

The blinded study drug should be swallowed whole with a glass of water (approximately 8 ounces or 240 mL) at approximately the same time(s) each day.

Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Rituximab will be administered via infusion. Premedication consisting of an anti-pyretic and an antihistaminic should always be administered before each infusion of rituximab. Premedication with glucocorticoids should also be considered.

Number of subjects in period 1	Duvelisib 25 mg BID and Rituximab	Placebo and Rituximab
Started	6	7
Completed	2	0
Not completed	4	7
IP discontinuation due to SAE	1	-
Patient progression disease	-	1
Termination of Study by Sponsor	2	6
Patient deemed ineligible	1	-

Adverse events

Adverse events information

Timeframe for reporting adverse events:

For randomized subjects, AEs will be collected on the eCRF from signing of the ICF through 30 days after the final dose of either the blinded study drug or rituximab (whichever is later).

Adverse event reporting additional description:

The SAEs and AEs have been recorded until the data base lock. At this time, there were 2 subjects remaining on study. The SAEs covering the time from the data cut to the date of the last subject last visit in this study are included here as well.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
05 October 2016	This study was terminated early due to enrolment challenges. Two patients in Italy remained on study at the time of the data cut (05 October 2016) and were rolled over into the extension study IPI-145-23. The Last Subject Last Visit (LSLV) date for this trial was 03 March 2017. Due to the small number of evaluable subjects, many of the endpoints were not amenable to analyses. Only ORR and the safety analyses are available for this report.	-

Notes:

Limitations and caveats

None reported
