

## Clinical trial results:

### SarCaBon: A randomised phase II trial of Saracatinib versus placebo for cancer-induced bone pain

#### Summary

EudraCT number	2013-002505-62
Trial protocol	GB
Global end of trial date	24 January 2018

#### Results information

Result version number	v1 (current)
This version publication date	02 December 2019
First version publication date	02 December 2019
Summary attachment (see zip file)	Published study (Published manuscript.pdf)

#### Trial information

##### Trial identification

Sponsor protocol code	STH16404
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02085603
WHO universal trial number (UTN)	-

Notes:

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

---

Analysis stage	Final
Date of interim/final analysis	24 January 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 January 2018
Global end of trial reached?	Yes
Global end of trial date	24 January 2018
Was the trial ended prematurely?	No

Notes:

---

**General information about the trial**

---

Main objective of the trial:

Is Saracatinib effective at reducing bone pain in cancer patients that have painful bone metastases by comparing patient's self-reported pain ratings (0 – 10 point scale) after 4 weeks on treatment with pain scores from patients who receive placebo.

Protection of trial subjects:

Patients were verbally re-consented at every clinic visit to make sure they still wanted to remain within the trial.

Experimental tests that were research-specific were chosen so that any discomfort produced was minimal.

If pain control during the study deteriorated radiotherapy was offered.

Background therapy:

Usual care

Evidence for comparator:

None were used

Actual start date of recruitment	11 March 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

Country: Number of subjects enrolled	United Kingdom: 13
Worldwide total number of subjects	13
EEA total number of subjects	13

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	6

From 65 to 84 years	7
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Trial opened to recruitment: 11/3/14

Trial closed to recruitment: 31/7/17

Territories: United Kingdom (Sheffield and Leeds)

### Pre-assignment

Screening details:

Cytologically or histologically confirmed solid tumours or multiple myeloma with painful bone metastases and poor control of bone pain in spite of pain medication.

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Blinding implementation details:

Pharmacokinetic measurement of study drug concentrations were not performed until the study had closed.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Active drug

Arm description:

Patients in the active drug arm received the study medication

Arm type	Experimental
Investigational medicinal product name	Saracatinib
Investigational medicinal product code	AZD0530
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

125mg tablet

Once per day for 4 weeks

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

Placebo arm

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Matched placebo tablet

Once per day for 4 weeks

<b>Number of subjects in period 1</b>	Active drug	Placebo
Started	7	6
Completed	6	6
Not completed	1	0
participant had SAE prior to commencing any treatm	1	-

## Baseline characteristics

### Reporting groups

Reporting group title	Active drug
Reporting group description:	
Patients in the active drug arm received the study medication	
Reporting group title	Placebo
Reporting group description:	
Placebo arm	

Reporting group values	Active drug	Placebo	Total
Number of subjects	7	6	13
Age categorical			
Patients aged 16yrs or older Baseline average pain $\geq 2$ and $\leq 9$ on a 0-10 numerical scale recorded on at least two separate days using the Brief Pain Inventory-Short Form WHO performance status $\leq 2$ Ability to take and absorb oral medications Able to give written informed consent and willing to follow the study protocol Adequate baseline haematological, hepatic and renal function			
Units: Subjects			
In utero	0	0	0
Preterm newborn infants (gestational age < 37 wks)	0	0	0
Newborns (0-27 days)	0	0	0
Infants and toddlers (28 days-23 months)	0	0	0
Children (2-11 years)	0	0	0
Adolescents (12-17 years)	0	0	0
Adults (18-64 years)	4	2	6
From 65-84 years	3	4	7
85 years and over	0	0	0
Age continuous			
Units: years			
arithmetic mean	61	65	
full range (min-max)	50 to 74	62 to 71	-
Gender categorical			
Patients were recruited at random			
Units: Subjects			
Female	3	2	5
Male	4	4	8
Tumour type			
Histology of the primary cancer			
Units: Subjects			
Adenocarcinoma of prostate	3	3	6
Chordoma	1	0	1
Lung cancer	0	2	2
Adenocarcinoma of breast	3	1	4

## End points

### End points reporting groups

Reporting group title	Active drug
Reporting group description:	
Patients in the active drug arm received the study medication	
Reporting group title	Placebo
Reporting group description:	
Placebo arm	

### Primary: Worst pain in last 24h after 4 weeks on treatment

End point title	Worst pain in last 24h after 4 weeks on treatment <sup>[1]</sup>
End point description:	
Worst pain in last 24h, Brief Pain Inventory-Short form Q3	
End point type	Primary
End point timeframe:	
After 4 weeks on treatment	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There is no statistical analysis provided for this endpoint as the trial did not reach the recruitment target and therefore performing formal statistics is not justified; the calculations lack sufficient power.

End point values	Active drug	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	6	6		
Units: 0-10				
arithmetic mean (standard deviation)	6.0 (± 2.4)	6.6 (± 2.3)		

### Statistical analyses

No statistical analyses for this end point

### Primary: Least pain in last 24h after 4 weeks on treatment

End point title	Least pain in last 24h after 4 weeks on treatment <sup>[2]</sup>
End point description:	
Least pain in last 24h Brief Pain Inventory-Short form Q4	
End point type	Primary
End point timeframe:	
After 4 weeks on treatment	

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There is no statistical analysis provided for this endpoint as the trial did not reach the recruitment target and therefore performing formal statistics is not justified; the calculations lack sufficient power.

End point values	Active drug	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	6	6		
Units: 0-10

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse events will be collected for all participants from the time of written informed consent until 30 days post cessation of trial therapy (including any IMP received during extended use).

Adverse event reporting additional description:

All AEs were monitored until resolution, or if the AE was determined to be chronic, until a cause is identified. If an AE remained unresolved at the conclusion of the study, the investigator made a clinical assessment about whether continued follow-up of the AE was warranted.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 December 2013	Substantial Amendment 01: Submission of Manufacturer's Authorisation.
12 May 2015	Substantial Amendment 07: Update to Reference Safety Information.
06 August 2015	Substantial Amendment 08: Addition of extended use of the IMP to the protocol, this allowed participants to take the IMP for an additional 6 months if there was significant improvement in their pain scores. Participants signed an additional consent form if they entered the 'extended use' phase and AEs continued to be collected.
22 February 2016	Substantial Amendment 10: Update to Reference Safety Information and Marketing Authorisation updated to include manufacturers from Sweden.
21 October 2016	Substantial Amendment 11: Reduction in sample size and update to trial stopping rules. Addition of new site/PI.
30 March 2017	Substantial Amendment 13: SAE clarification for inpatient hospitalisation due to progression of disease. Clarification of definition of End of Trial.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Sample size of 12 participants.

Notes:

---
