

## Clinical trial results:

### A Randomised Multicentre Open Label Blinded End Point Trial to Compare the Effects of Spironolactone to Chlortalidone on Left Ventricular Mass and Arterial Stiffness in Stage 3 Chronic Kidney Disease

#### Summary

EudraCT number	2013-002636-25
Trial protocol	GB
Global end of trial date	09 April 2019

#### Results information

Result version number	v1 (current)
This version publication date	25 June 2020
First version publication date	25 June 2020

#### Trial information

##### Trial identification

Sponsor protocol code	RG_13-013NS
-----------------------	-------------

##### Additional study identifiers

ISRCTN number	ISRCTN94696478
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	University of Birmingham
Sponsor organisation address	Aston Webb Building, Birmingham, United Kingdom, B15 2TT
Public contact	Dr Rebekah Wale, Birmingham Clinical Trials Unit , +44 01214158445, r.wale@bham.ac.uk

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 April 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 December 2017
Global end of trial reached?	Yes
Global end of trial date	09 April 2019
Was the trial ended prematurely?	No

Notes:

---

## General information about the trial

Main objective of the trial:

Does giving Spironolactone to patients with early stage chronic kidney disease reduce arterial stiffness and left ventricular mass to a greater degree than the standard blood pressure lowering drug treatment, Chlortalidone?

Updated April 2016

Does giving Spironolactone to patients with early stage chronic kidney disease reduce left ventricular mass to a greater degree than the standard blood pressure lowering drug treatment, Chlortalidone?

---

Protection of trial subjects:

All sites were provided with the SPIRO-CKD protocol that provided specific instruction relating to inclusion/exclusion criteria and trial patient safety.

There was clear instruction relating to trial intervention safety and considerations detailed within the protocol.

SPIRO-CKD had two Data Monitoring Committees to monitor patient safety throughout the trial.

---

Background therapy:

Chronic Kidney Disease (CKD) is a major but poorly recognised and under-treated risk factor for cardiovascular disease. Stages 2 and 3 CKD are defined by a GFR of 30-89 ml/min/1.73m<sup>2</sup> were investigated in this study. There is a graded inverse relationship between cardiovascular risk and GFR which is independent of age, sex and other risk factors such as hypertension and diabetes. While the cardiovascular risk of end-stage CKD is extreme, in public health terms the burden resides in early stage disease (CKD stages 1-3), which is more prevalent, affecting almost 1 in 7 of the entire population, including approximately 4% of those aged 40-59, and more than 40% of those aged over 70 years. Thus, CKD is a potentially important risk factor for cardiovascular disease in the general population. The main pathological features of cardiovascular disease in CKD are:

- Myocardial disease characterised by LVH and fibrosis accompanied by systolic and diastolic dysfunction.
- Arterial wall thickening, stiffening and calcification (arteriosclerosis).
- Coronary and peripheral artery atherosclerosis.

Previous research suggested that compared with placebo, the use of spironolactone resulted in large reductions in left ventricular mass and arterial stiffness (pulse wave velocity, augmentation index and aortic distensibility). This trial has given rise to considerable optimism that MRB therapy might help to prevent cardiovascular disease in patients with CKD.

Chlortalidone (until recently known by its US adopted name, chlorthalidone) is a thiazide-like diuretic and an effective anti-hypertensive drug proven to reduce blood pressure, adverse cardiovascular events and adverse renal outcomes as effectively as calcium channel blockers or ACE inhibitors.

Therefore SPIRO-CKD compared the effects of spironolactone versus chlortalidone on LV mass in patients with stage 2 and stage 3.

---

Evidence for comparator:

A prospective, randomised, open-label, blinded-endpoint (PROBE) study design.

All recruited patients will receive either spironolactone (25mg) or Chlortalidone (½ of a 50mg tablet) daily for 40 weeks.

Patients were followed-up for the duration of treatment and for 6 weeks after discontinuation of trial medication (wash-out period).

Actual start date of recruitment	02 September 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

---

## Population of trial subjects

---

### Subjects enrolled per country

---

Country: Number of subjects enrolled	United Kingdom: 154
Worldwide total number of subjects	154
EEA total number of subjects	154

Notes:

---

### Subjects enrolled per age group

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	96
From 65 to 84 years	56
85 years and over	2

## Subject disposition

### Recruitment

Recruitment details:

The trial opened for recruitment on the 3rd June 2014 and the first patient was randomised on the 26th June 2014 and the last patient was randomised on the 21st December 2016. A total of 154 patients were randomised into the SPIRO-CKD Trial with 4 centres recruiting patients into the trial with equal numbers in both arms.

### Pre-assignment

Screening details:

A total of 9325 were screened for the trial, of these screened 154 were randomised.

### Period 1

Period 1 title	Baseline
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Assessor <sup>[1]</sup>

Blinding implementation details:

A Randomised Multicentre Open Label Blinded End Point Trial to Compare the Effects of Spironolactone to Chlortalidone on Left Ventricular Mass in Stage 2 and Stage 3 Chronic Kidney Disease.  
A prospective, randomised, open-label, blinded-endpoint (PROBE) study design.

### Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	Spironolactone
------------------	----------------

Arm description:

Baseline

Arm type	Experimental
Investigational medicinal product name	Spironolactone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Coated tablet
Routes of administration	Oral use

Dosage and administration details:

One 25mg tablet OD for 40 weeks orally

<b>Arm title</b>	Chlortalidone
------------------	---------------

Arm description:

Baseline

Arm type	Active comparator
Investigational medicinal product name	Chlortalidone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Chlortalidone at a dose of ½ a 50 mg tablet od. The duration of treatment will be 40 weeks in total.

Notes:

[1] - The roles blinded appear inconsistent with a simple blinded trial.

Justification: SPIRO-CKD was an assessor blind trial.

Number of subjects in period 1	Spironolactone	Chlortalidone
Started	77	77
Completed	77	77

## Period 2

Period 2 title	Week 40
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Investigator <sup>[2]</sup>

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Spironolactone

Arm description: -

Number of subjects analysed	68	68	60	59
Units: mL/m <sup>2</sup>				
arithmetic mean (standard deviation)	58.4 (± 12.3)	59.3 (± 12.7)	57.4 (± 13.4)	56.3 (± 12.3)

### Statistical analyses

Statistical analysis title	Linear Regression Model
Comparison groups	Spironolactone v Chlortalidone
Number of subjects included in analysis	119
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.205
Method	Regression, Linear
Parameter estimate	Mean difference (final values)
Point estimate	1.813
Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.006
upper limit	4.632
Variability estimate	Standard error of the mean

### Secondary: Incidence of Hyperkalaemia

End point title	Incidence of Hyperkalaemia
End point description:	
15 patients were excluded from this analysis (7 in Spironolactone group and 8 in Chlortalidone group) because these patients withdrew, were lost to follow up or died prior to incidence of hyperkalaemia and did not complete the 40 weeks of trial follow up.	
End point type	Secondary
End point timeframe:	
Baseline to week 40	

End point values	Spironolactone	Chlortalidone		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	70	69		
Units: Total Hyperkalaemia Events				
0 incidences	58	67		
1 incidence	7	2		
2 incidences	2	0		
3 incidences	2	0		
4 incidences	1	0		

## Statistical analyses

Statistical analysis title	Poisson Regression Model
Comparison groups	Spironolactone v Chlortalidone
Number of subjects included in analysis	139
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.002
Method	Poisson Regression Model
Parameter estimate	Incidence Rate Ratio
Point estimate	10.2
Confidence interval	
level	95 %
sides	2-sided
lower limit	2.38
upper limit	43.66
Variability estimate	Standard error of the mean

## Secondary: Changes in UACR ratio

End point title	Changes in UACR ratio
End point description:

Method	Log Binomial
Parameter estimate	Risk ratio (RR)
Point estimate	0.556
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.292
upper limit	1.058
Variability estimate	Standard error of the mean

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All adverse events were reportable to the SPIRO-CKD Trial Office up to 6 weeks post last IMP administration.

Any SUSAR related to the IMP was expected to be reported irrespective of how long after IMP administration the reaction has occurred.

Adverse event reporting additional description:

Adverse events were recorded in the medical records and case report forms. Most adverse events/reactions that occurred in this trial, whether they were serious or not, were 'expected' treatment-related toxicities due to the drugs used in this trial.

Assessment type	Non-systematic

### Reporting groups

Reporting group title	Spironolactone
-----------------------	----------------

Reporting group description: -

Reporting group title	Chlortalidone
-----------------------	---------------

Reporting group description: -

Serious adverse events	Spironolactone	Chlortalidone	
Total subjects affected by serious adverse events			
subjects affected / exposed	5 / 77 (6.49%)	6 / 77 (7.79%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events	0	0	
Injury, poisoning and procedural complications			
Fall	Additional description: Subject tripped and fell onto left side and was admitted into AE and thoracic surgery with a rib fracture and small pneumothorax on left side		
subjects affected / exposed	1 / 77 (1.30%)	0 / 77 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Surgical and medical procedures			
Elective surgery, right ankle reconstruction			
subjects affected / exposed	1 / 77 (1.30%)	0 / 77 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Elective surgery	Additional description: Elective knee replacement		

subjects affected / exposed	0 / 77 (0.00%)	1 / 77 (1.30%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Cardiac disorders			
Chest pain	Additional description: Chest pain		
subjects affected / exposed	1 / 77 (1.30%)	1 / 77 (1.30%)	
occurrences causally related to treatment / all	0 / 1	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Nervous system disorders			
Loss of consciousness	Additional description: Collapsed with loss of consciousness which has resulted in a fractured left ankle. In the emergency room was found to have a prolonged QTC on ECG, possibly due to hypotension.		
subjects affected / exposed	1 / 77 (1.30%)	0 / 77 (0.00%)	
occurrences causally related to treatment / all	1 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Pregnancy, puerperium and perinatal conditions			
Pregnancy			
subjects affected / exposed	0 / 77 (0.00%)	1 / 77 (1.30%)	
occurrences causally related to treatment / all	0 / 0	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
General disorders and administration site conditions			
Shortness of breath, muscle cramps, Anaemia, tiredness			
subjects affected / exposed	1 / 77 (1.30%)	0 / 77 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Gastrointestinal disorders			
Perforated diverticulum			
subjects affected / exposed	1 / 77 (1.30%)	0 / 77 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Abdominal pain	Additional description: Admitted to hospital with a four day history of upper and lower abdominal pain, diarrhoea, nausea and vomiting, Imaging revealed duodenitis.		
subjects affected / exposed	1 / 77 (1.30%)	0 / 77 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	

Respiratory, thoracic and mediastinal disorders			
Shortness of breath			
subjects affected / exposed	1 / 77 (1.30%)	0 / 77 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Hepatobiliary disorders			
Cholecystitis			
subjects affected / exposed	0 / 77 (0.00%)	1 / 77 (1.30%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Renal and urinary disorders			
Kidney Pain			
subjects affected / exposed	1 / 77 (1.30%)	0 / 77 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Rash	Additional description: Developed a rash on chest.		
subjects affected / exposed	0 / 77 (0.00%)	1 / 77 (1.30%)	
occurrences causally related to treatment / all	0 / 0	1 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Infections and infestations			
Gastroenteritis			
subjects affected / exposed	0 / 77 (0.00%)	1 / 77 (1.30%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	Spironolactone	Chlortalidone	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	60 / 77 (77.92%)	65 / 77 (84.42%)	
Nervous system disorders			
Dizziness			
subjects affected / exposed	13 / 77 (16.88%)	22 / 77 (28.57%)	
occurrences (all)	21	32	
Headache			

subjects affected / exposed occurrences (all)	11 / 77 (14.29%) 14	9 / 77 (11.69%) 13	
General disorders and administration site conditions Drowsiness subjects affected / exposed occurrences (all)	4 / 77 (5.19%) 7	5 / 77 (6.49%) 5	
Symptomatic hypotension subjects affected / exposed occurrences (all)	7 / 77 (9.09%) 12	9 / 77 (11.69%) 12	
Immune system disorders Hypersensitivity reactions subjects affected / exposed occurrences (all)	2 / 77 (2.60%) 3	0 / 77 (0.00%) 0	
Ear and labyrinth disorders Vertigo subjects affected / exposed occurrences (all)	1 / 77 (1.30%) 1	1 / 77 (1.30%) 1	
Reproductive system and breast disorders Breast tenderness/enlargement subjects affected / exposed occurrences (all)	4 / 77 (5.19%) 4	0 / 77 (0.00%) 0	
Gynecomastia subjects affected / exposed occurrences (all)	3 / 77 (3.90%) 6	0 / 77 (0.00%) 0	
Sexual dysfunction subjects affected / exposed occurrences (all)	1 / 77 (1.30%) 2	1 / 77 (1.30%) 1	
Gastrointestinal disorders Constipation subjects affected / exposed occurrences (all)	1 / 77 (1.30%) 1	4 / 77 (5.19%) 4	
Diarrhoea subjects affected / exposed occurrences (all)	8 / 77 (10.39%) 10	5 / 77 (6.49%) 5	
GI cramping			

subjects affected / exposed occurrences (all)	1 / 77 (1.30%) 1	4 / 77 (5.19%) 4	
Gastric irritation subjects affected / exposed occurrences (all)	6 / 77 (7.79%) 6	5 / 77 (6.49%) 5	
Nausea subjects affected / exposed occurrences (all)	7 / 77 (9.09%) 7	5 / 77 (6.49%) 5	
Vomiting subjects affected / exposed occurrences (all)	3 / 77 (3.90%) 3	1 / 77 (1.30%) 1	
Skin and subcutaneous tissue disorders Rash subjects affected / exposed occurrences (all)	10 / 77 (12.99%) 13	3 / 77 (3.90%) 5	
Psychiatric disorders Anorexia subjects affected / exposed occurrences (all)	2 / 77 (2.60%) 2	0 / 77 (0.00%) 0	
Renal and urinary disorders Hyperkalaemia subjects affected / exposed occurrences (all)	3 / 77 (3.90%) 5	0 / 77 (0.00%) 0	
Hypokalaemia subjects affected / exposed occurrences (all)	0 / 77 (0.00%) 0	1 / 77 (1.30%) 1
