

## Clinical trial results:

### A Randomized, Double-Blind, Placebo-Controlled, Parallel-Group Study Evaluating the Efficacy and Safety of Alirocumab in Patients with Primary Hypercholesterolemia Not Treated With a Statin

#### Summary

EudraCT number	2013-002659-14
Trial protocol	BE NL ES DK
Global end of trial date	

#### Results information

Result version number	v1
This version publication date	09 February 2017
First version publication date	09 February 2017

#### Trial information

##### Trial identification

Sponsor protocol code	EFC13786
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02023879
WHO universal trial number (UTN)	U1111-1146-3517
Other trial identifiers	Study Name: ODYSSEY CHOICE II

Notes:

Notes:

##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	27 November 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	27 October 2014
Global end of trial reached?	No

Notes:

## General information about the trial

Main objective of the trial:

To demonstrate the reduction of low-density lipoprotein cholesterol (LDL-C) by a regimen including an alirocumab starting dose of 150 mg every 4 weeks (Q4W) as add-on to non-statin lipid modifying background therapy or as monotherapy in comparison with placebo in subjects with primary hypercholesterolemia not treated with a statin.

Protection of trial subjects:

Subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject is participating, contact details and any information needed in the event of a medical emergency. Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy:

All subjects were to maintain a stable diet throughout the entire study duration, including the screening period. Subjects receiving background non-statin lipid modifying therapy (LMT) (ezetimibe or fenofibrate) had to continue their treatment without change (including dose) from screening through the end of 24-week double-blind treatment period barring exceptional circumstances.

Evidence for comparator: -

Actual start date of recruitment	16 December 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 56
Country: Number of subjects enrolled	Spain: 28
Country: Number of subjects enrolled	Belgium: 12
Country: Number of subjects enrolled	Denmark: 21
Country: Number of subjects enrolled	Australia: 12
Country: Number of subjects enrolled	Canada: 27
Country: Number of subjects enrolled	New Zealand: 6
Country: Number of subjects enrolled	United States: 71
Worldwide total number of subjects	233
EEA total number of subjects	117

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	125
From 65 to 84 years	104
85 years and over	4

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted at 43 centers in 8 countries. A total of 402 subjects screened between December, 2013 and May, 2014, of whom 233 subjects were randomized and 169 were screen failures. Screen failures were mainly due to exclusion criteria met.

### Pre-assignment

Screening details:

Randomization was stratified by statin intolerant status and background therapy (non-statin lipid therapy vs diet). Randomization followed a 1:2:1 ratio for placebo, alirocumab 75 mg and alirocumab 150 mg instead of 1:1:2 as initially planned due to systematic error in treatment allocation algorithm discovered after all subjects were randomized.

### Period 1

Period 1 title	Core Study Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo Q2W

Arm description:

Placebo (for alirocumab) every 2 weeks (Q2W) added to stable non-statin lipid modifying therapy (LMT) or diet alone for 24 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

1 mL subcutaneous injection in the abdomen, thigh or outer area of the upper arm by self-injection or by another designated person using the auto-injector.

<b>Arm title</b>	Alirocumab 75 mg Q2W/Up to 150 mg Q2W (Calibrator)
------------------	--

Arm description:

Alirocumab 75 mg Q2W added to stable non-statin LMT or diet alone for 24 weeks. Alirocumab dose up-titrated to 150 mg Q2W from Week 12 when targeted low-density lipoprotein cholesterol (LDL-C) levels at Week 8 were not achieved i.e. LDL-C  $\geq 70$  mg/dL (1.81 mmol/L) or  $\geq 100$  mg/dL (2.59 mmol/L) depending on cardiovascular risk or  $< 30\%$  LDL-C reduction from baseline.

Arm type	Experimental
Investigational medicinal product name	Alirocumab
Investigational medicinal product code	SAR236553, REGN727
Other name	Praluent®
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

1 mL subcutaneous injection in the abdomen, thigh or outer area of the upper arm by self-injection or by another designated person using the auto-injector.

<b>Arm title</b>	Alirocumab 150 mg Q4W/Up to 150 mg Q2W
------------------	--

Arm description:

Alirocumab 150 mg Q4W alternating with placebo (for alirocumab) Q4W added to stable non-statin LMT or diet alone for 24 weeks. Alirocumab dose up-titrated to 150 mg Q2W from Week 12 when targeted LDL-C levels at Week 8 were not achieved i.e. LDL-C  $\geq 70$  mg/dL (1.81 mmol/L) or  $\geq 100$  mg/dL (2.59 mmol/L) depending on cardiovascular risk or  $<30\%$  LDL-C reduction from baseline.

Arm type	Experimental
Investigational medicinal product name	Alirocumab
Investigational medicinal product code	SAR236553, REGN727
Other name	Praluent®
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

1 ml subcutaneous injection in the abdomen, thigh or outer area of the upper arm by self-injection or by another designated person using the auto-injector.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

1 mL subcutaneous injection in the abdomen, thigh or outer area of the upper arm by self-injection or by another designated person using the auto-injector.

Number of subjects in period 1	Placebo Q2W	Alirocumab 75 mg Q2W/Up to 150 mg Q2W (Calibrator)	Alirocumab 150 mg Q4W/Up to 150 mg Q2W
Started	58	116	59
Treated	58	115	58
Completed	54	107	50
Not completed	4	9	9
Consent withdrawn by subject	1	-	1
Physician decision	-	1	-
Adverse events	2	2	5
Randomized but not treated	-	1	1

End point title	Percent Change From Baseline in Apo A-1 at Week 12 - ITT Analysis
-----------------	---

End point description:

Adjusted LS means and standard errors at Week 12 from MMRM including all available post-baseline data from Week 4 to Week 24 regardless of status on-or off-treatment. ITT population. Number of subjects analyzed = subjects of the ITT population with available data at specified time-points.

End point type	Secondary
End point timeframe:	
From Baseline to Week 24	

End point values	Placebo Q2W	Alirocumab 75 mg Q2W/Up to 150 mg Q2W (Calibrator)	Alirocumab 150 mg Q4W/Up to 150 mg Q2W	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	56	112	58	
Units: percent change				
least squares mean (standard error)	2.6 (± 1.5)	5.9 (± 1.1)	7.6 (± 1.5)	

### Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All Adverse Events (AEs) were collected from signature of the informed consent form up to the primary completion date (32 weeks) regardless of seriousness or relationship to investigational medicinal product (IMP).

Adverse event reporting additional description:

Reported AEs & deaths are treatment-emergent, i.e., AEs developed/worsened & deaths that occurred "on-treatment" (from 1st dose of double-blind injection up to day of last dose [active or placebo depending on Q2W or Q4W regimen] + 70 days or up to the day before the first injection in open-label extension period for subjects entering extension period).

Assessment type	Systematic

### Reporting groups

Reporting group title	Placebo Q2W
-----------------------	-------------

Reporting group description:

Subjects exposed to placebo SC injection Q2W added to stable non-statin LMT or diet alone (mean exposure of 23 weeks).

Reporting group title	Alirocumab 150 mg Q4W/Up to 150 mg Q2W
-----------------------	--

Reporting group description:

Subjects exposed to alirocumab 150 mg Q4W/up to 150 mg Q2W SC injection added to stable non-statin LMT or diet alone (mean exposure of 22 weeks).

Reporting group title	Alirocumab 75 mg Q2W/Up to 150 mg Q2W (Calibrator)
-----------------------	--

Reporting group description:

Subjects exposed to alirocumab 75 mg Q2W/up to 150 mg Q2W SC injection added to stable non-statin LMT or diet alone (mean exposure of 23 weeks).

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 October 2013	-Changes were made to the exclusion criterion for consistency with the 2004 adult treatment panel (ATP) III guidelines. -Timing of the primary endpoint was changed (at Week 24, to be consistent with the rest of the phase 3 program). -Changes were made to the analysis of the primary and secondary endpoints (use of an ITT approach). -Added collection of measured LDL-C at Week 0 and Week 24.
25 August 2014	-Adjusted the list of key and other secondary efficacy endpoints and estimands (ITT estimand and on-treatment estimand). -Added time points (Week 9, Week 10 and Week 11) in the model for the primary efficacy analysis endpoint. -Specified sensitivity analyses to be performed on the primary efficacy endpoint.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The systematic randomization error was not anticipated to have an impact on the power of the study. The sample size to detect a difference in efficacy endpoints was reached (it was increased to obtain additional safety data) and blind was maintained.

Notes:

---
