

Clinical trial results:

Long-term follow-up at 10-years of patients enrolled in the fingolimod Phase 2 program in relapsing multiple sclerosis

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use <https://www.novctrd.com/CtrdWeb/home.novfor> complete trial results

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 December 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	02 December 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to investigate whether continuous use of fingolimod over 10 years reduced the progression of disability, as measured by the mean Expanded Disability Status Scale (EDSS) score, compared to shorter treatment duration.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 June 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 47
Country: Number of subjects enrolled	Denmark: 7
Country: Number of subjects enrolled	France: 16
Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	United Kingdom: 3
Country: Number of subjects enrolled	Italy: 17
Country: Number of subjects enrolled	Poland: 16
Country: Number of subjects enrolled	Portugal: 20
Country: Number of subjects enrolled	Spain: 34
Country: Number of subjects enrolled	Switzerland: 13
Worldwide total number of subjects	175
EEA total number of subjects	115

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	175
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This extension study was a multicenter follow-up study of participants who enrolled in FTY720D2201 (NCT02307838). Although participants in this study did not receive study treatment, the participant flow is based on the treatments received in FTY720D2201.

Pre-assignment

Screening details:

A total of 177 participants were enrolled into the study. However, 2 participants were erroneously enrolled into the study because they did not meet the inclusion criteria. Therefore, they were not included in any analyses, and as such, the participant flow is based on 175 participants.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	FTY720 5.0 mg

Arm description:

In FTY720D2201, participants received FTY720 5.0 mg every day (q.d.) oral dose for 6 months.

Arm type	Experimental
Investigational medicinal product name	Fingolimod
Investigational medicinal product code	FTY720
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

In FTY720D2201, participants received FTY720 5.0 mg every day (q.d.) oral dose for 6 months.

Arm title	FTY720 1.25 mg
------------------	----------------

Arm description:

In FTY720D2201, participants received FTY720 1.25 mg q.d. oral dose for 6 months.

Arm type	Experimental
Investigational medicinal product name	Fingolimod
Investigational medicinal product code	FTY720
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

In FTY720D2201, participants received FTY720 1.25 mg q.d. oral dose for 6 months

Arm title	Placebo
------------------	---------

Arm description:

In FTY720D2201, participants received matching placebo to FTY720 q.d. for 6 months.

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

In FTY720D2201, participants received matching placebo to FTY720 q.d. for 6 months.

Number of subjects in period 1	FTY720 5.0 mg	FTY720 1.25 mg	Placebo
Started	56	64	55
Completed	56	64	55

Primary: Change from baseline (BL) in Expanded Disability Status Scale (EDSS)

End point title	Change from baseline (BL) in Expanded Disability Status Scale (EDSS)
-----------------	--

End point description:

EDSS is a scale for assessing neurologic impairment in MS. It consists of eight functional systems (FS) which are used to derive the EDSS steps (score) ranging from 0 (normal) to 10 (death due to MS). The functional systems are Visual, Brain Stem, Pyramidal, Cerebellar, Sensory, Bowel and Bladder, Cerebral and Other functions. Based on the assessment of each FS, the participant's score is determined between 0 to 10. A negative change from baseline indicates improvement.

End point title	Change from baseline in Multiple Sclerosis Fuctional Composite (MSFC) component: nine hole peg test (9-HPT)
End point description:	

The 9-HPT is a quantitative measure of upper extremity (arm and hand) function. Both the dominant and non-dominant hands are tested twice (two consecutive trials of the dominant hand, followed immediately by two consecutive trials of the non-dominant hand). The time limit per trial is 300 seconds. The right and left hand scores were the time in seconds it took to insert and remove 9 pegs ((the average scores from the four trials on the 9-HPT (the two trials for each hand are averaged, converted to the reciprocals of the mean times for each hand and then the two reciprocals are averaged)). A negative change from baseline indicates improvement.

Secondary: Change from baseline in MSFC component: timed 25-foot walk test score

End point title	Change from baseline in MSFC component: timed 25-foot walk test score
-----------------	---

End point description:

The Timed 25-Foot Walk is a quantitative measure of lower extremity function. The patient is directed to one end of a clearly marked 25-foot (7.62 m) course and is instructed to walk 25 feet (7.62 meter) as quickly as possible, but safely. The task is immediately administered again by having the patient walk back the same distance. Patients may use assistive devices when doing this task. The test scores were the time in seconds it took to walk the 25 feet. A negative change from baseline indicates improvement.

Secondary: Change from baseline in Multiple Sclerosis Functional Composite (MSFC) Z score

End point title	Change from baseline in Multiple Sclerosis Functional Composite (MSFC) Z score
-----------------	--

End point description:

MSFC is a composite measure encompassing information from the nine-hole peg test (arm dimension), timed 25 foot walk (leg dimension) and PASAT. The MSFC composite score was calculated as follows: (1) the average scores from the four trials on the 9-HPT (the two trials for each hand were averaged, converted to the reciprocals of the mean times for each hand and then the two reciprocals were averaged); (2) the average scores of two 25-Foot Timed Walk trials; (3) the number correct from the PASAT-3. The MSFC is based on the concept that scores for these three dimensions—arm, leg, and cognitive function are combined to create a single score (the MSFC) that can be used to detect change over time in a group of multiple sclerosis patients. This was done by creating Z-scores for each component of the MSFC, and averaging them to create an overall composite score. A negative change from baseline indicates improvement.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events are collected from First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All adverse events reported in this record are from date of First Patient First Treatment until Last Patient Last Visit.

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA
Dictionary version	18.0

Reporting groups

Reporting group title	Non-Continuous other DMTs
-----------------------	---------------------------

Reporting group description:

Non-Continuous other DMTs

Serious adverse events	Non-Continuous other DMTs		
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 55 (0.00%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events	0		

Frequency threshold for reporting non-serious adverse events: 0 %

Non-serious adverse events	Non-Continuous other DMTs		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	1 / 55 (1.82%)		
Nervous system disorders			
Multiple sclerosis relapse			
subjects affected / exposed	1 / 55 (1.82%)		
occurrences (all)	1		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use https://www.novctrd.com/CtrdWeb/home.nov for complete trial results
