

Clinical trial results:

An exploratory, 12 week, randomised, partially double-blinded, placebo-controlled parallel group trial to explore the effects of once daily treatments of orally inhaled tiotropium + olodaterol fixed dose combination or tiotropium (both delivered by Respimat® inhaler), supervised exercise training and behavior modification on exercise capacity and physical activity in patients with Chronic Obstructive Pulmonary Disease (COPD).

Summary

EudraCT number	2013-002671-18

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 December 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 August 2015
Global end of trial reached?	Yes
Global end of trial date	31 October 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The overall objective of this trial was to explore the effects of bronchodilator monotherapy (tiotropium) plus behavioural modification, bronchodilator combination therapy (tiotropium + olodaterol fixed dose combination [FDC]) plus behavioural modification, and bronchodilator combination therapy (tiotropium + olodaterol FDC) plus exercise training plus behavioural modification on exercise capacity and physical activity in COPD patients.

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were to be entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all subjects was adhered to throughout the trial conduct. Patients in placebo arm have used their maintenance inhaled corticosteroids through the study, have been, as all patients in the trial, provided with a short acting bronchodilator for rescue use, had to be clinically stable 4 weeks prior to randomization, and were withdrawn from the trial in case of COPD exacerbation requiring extensive treatment and/or hospitalization.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 March 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Subject disposition

Recruitment

Recruitment details:

An exploratory, randomised, partially double-blinded, placebo-controlled, parallel group trial to explore the effects of tiotropium + olodaterol fixed dose combination (FDC) or tiotropium, supervised exercise training and behaviour modification on exercise capacity and physical activity in patients with Chronic Obstructive Pulmonary Disease (COPD)

Pre-assignment

Screening details:

All subjects were screened for eligibility to participate in the trial. Subjects attended a specialist site which ensured that they met all strictly implemented inclusion/exclusion criteria. Subjects were not to be entered to trial treatment if any one of the specific entry criteria were violated.

Period 1

Period 1 title	Treatment Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

Patients in this partially double-blind trial remained blinded with regard to the randomised treatment assignments until after database lock.

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo with behavioural modification (BM)

Arm description:

Placebo matching tiotropium + olodaterol FDC or tiotropium solution was delivered to the patients orally once daily via RESPIMAT inhaler, with BM for 12 weeks. In total 76 subjects were randomised for this arm but one subject was not treated and hence the number of subjects started is 75.

Arm type	Placebo
Investigational medicinal product name	Placebo matching tiotropium + olodaterol_FDC
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

Placebo matching tiotropium + olodaterol FDC solution was delivered to the patients orally once daily via RESPIMAT inhaler, with BM for 12 weeks.

Investigational medicinal product name	Placebo matching tiotropium
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

Placebo matching tiotropium solution was delivered to the patients orally once daily via RESPIMAT inhaler, with BM for 12 weeks.

Arm title	Tiotropium (Tio) 5 micro-grams (µg) with BM
------------------	---

Arm description:

Tiotropium 5 µg solution was delivered to the patients orally once daily via RESPIMAT inhaler, with BM for 12 weeks.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Tiotropium
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

Tiotropium 5 µg solution was delivered to the patients orally once daily via RESPIMAT inhaler, with BM for 12 weeks.

Arm title	Tiotropium + olodaterol (Olo) (5/5 µg) FDC with BM
------------------	--

Arm description:

Tiotropium 5 µg plus olodaterol 5 µg FDC solution was delivered to the patients orally once daily via RESPIMAT inhaler, with BM for 12 weeks.

Adverse event, non-fatal	5
Other Reason	1
Protocol deviation	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Baseline characteristics are based on patients who were randomised after successfully completing the screening period and received at least one dose of the trial medication.

Primary: Endurance time during Endurance Shuttle Walk Test (ESWT) to symptom limitation after 8 weeks

End point title	Endurance time during Endurance Shuttle Walk Test (ESWT) to symptom limitation after 8 weeks
End point description: Endurance time during ESWT to symptom limitation at walking speed corresponding to 85% of predicted maximum oxygen consumption (VO2 peak) after 8 weeks of pharmacological treatment and non-pharmacological intervention. The numerical value of endurance time in seconds was transformed in log10 scale to correct for skewness and then an analysis of covariance (ANCOVA) was fitted to the log10-transformed data and the least square means (LSMean) and standard error (SE) were obtained. To present the results in a way easier for interpretation, the least square mean from the ANCOVA fitted to the log10-transformed data were transformed back taking 10 to the power of the least square estimate to obtain the geometric mean and the corresponding SE was transformed using delta method to get the corresponding SE of the geometric mean. Full analysis set (FAS): This patient set included all patients in the TS who had baseline measurement and at least 1 post-baseline measurement for the primary endpoint

Secondary: Perceived difficulties as evaluated with Functional Performance Inventory (FPI) - Short Form (SF) total score at Week 12

End point title	Perceived difficulties as evaluated with Functional Performance Inventory (FPI) - Short Form (SF) total score at Week 12
-----------------	--

End point description:

Perceived difficulties as evaluated with Functional Performance Inventory (FPI) - Short Form (SF) total score at Week 12. The FPI-SF self-report questionnaire consists of 2 pages of questions relating to 6 dimensions: body care, household maintenance, physical exercise, recreation, spiritual activities, and social activities. Five answer options were possible: "Do with no difficulty, do with some difficulty, do with great difficulty, don't do because of health reasons, and don't do because choose not to". Domain scores and total scores were calculated from the answers. Full analysis set (FAS): This patient set included all patients in the TS who had baseline measurement and at least 1 post-baseline measurement for the primary endpoint. Patients were assigned to the FAS after implementation of any data handling

rules that set measurements to missing. Patients with available data were included.

End point type	Secondary

Secondary: Endurance time during Endurance Shuttle Walk Test (ESWT) to symptom limitation after 12 weeks

End point title	Endurance time during Endurance Shuttle Walk Test (ESWT) to symptom limitation after 12 weeks
-----------------	---

End point description:

Endurance time during ESWT to symptom limitation at walking speed corresponding to 85% of maximum oxygen consumption (VO₂peak) after 12 weeks of pharmacological treatment and non-pharmacological intervention. The numerical value of endurance time in seconds was transformed in log₁₀ scale to correct for skewness and then the ANCOVA was fitted to the log₁₀-transformed data and the least square means and SE were obtained. To present the results in a way easier for interpretation, the least square mean from the ANCOVA fitted to the log₁₀-transformed data were transformed back taking 10 to the power of the least square estimate to obtain the geometric mean and the corresponding SE was transformed using delta method to get the corresponding SE of the geometric mean. Full

analysis set (FAS): This patient set included all patients in the TS who had baseline measurement and at least 1 post-baseline measurement for the primary endpoint. Patients with available data were included.

Statistical analysis description:

MMRM model including fixed effects of treatment, planned test day, treatment by test day interaction, baseline, and baseline by test day interaction; patient as a random effect. Compound symmetry covariance structure for within-patient variation and Kenward-Roger approximation of denominator degrees of freedom. The LSMean Difference is calculated as Tio+Olo (5/5 µg) FDC with exercise training (ET) and BM minus Tiotropium + olodaterol (Olo) (5/5 µg) FDC with BM.

Comparison groups	Tiotropium + olodaterol (Olo) (5/5 µg) FDC with BM v Tio+Olo (5/5 µg) FDC with exercise training (ET) and BM
Number of subjects included in analysis	142
Analysis specification	Pre-specified

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first dose of study medication up to a period of 21 days after the last dose of study medication were assigned to the treatment period, up to 134 days.

Adverse event reporting additional description:

All adverse events, serious and non-serious, occurring during the course of the clinical trial (i.e. from signing the informed consent onwards through the observational phase) were to be collected, documented and reported to the sponsor by the investigator on the appropriate electronic case report form / serious adverse event reporting forms.

Assessment type	Systematic

Musculoskeletal and connective tissue disorders Back pain subjects affected / exposed occurrences (all)	1 / 76 (1.32%) 1	8 / 303 (2.64%) 8	
Infections and infestations Nasopharyngitis subjects affected / exposed occurrences (all)	10 / 76 (13.16%) 11	31 / 303 (10.23%) 36	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 April 2014	This amendment includes the following; Waist circumference was removed from the measurements of moderating variables. Tiotropium was entered as a comparator product. SpO2 was entered under criteria for safety with exercise testing. Medical history was removed from the flowchart and in the main flowchart, timing of the trial follow-up visit was clarified. Medication washout check was entered also under Visit 2 for the washout of ipratropium in the main flowchart. Pedometer use was entered and MBS-S use corrected for the 6MWT. In the behavioural modification flowchart, visit windows were specified and names of questionnaires were corrected. Exercise capacity and physical activity were to be assessed after the end of supervised exercise training in the Tio+Olo 5/5 µg FDC + BM + ET arm. Patients were not to inhale trial medication on the morning of Visits 5 to 8. In safety laboratory urine examination added. Patient treatment preference assessment was added to the individual BM pre-session. Details on bronchodilator therapy required for treatment of GOLD Stage II and III patients were deleted. Intensity of breathing and leg discomfort recording during 6MWT was additionally specified, and timing of 6MWT after the ESWT on Visits 5 and 8 and IC measurement post dose on Visits 3, 5 and 8 was re-specified. Timing of baseline LF and exercise tests specified at Visit 3. Modified Borg Scale use during 6MWT has been clarified. Minor corrections and further clarifications were introduced.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
