Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 August 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	14 May 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This study will be conducted in approximately 228 subjects with anemia associated with CKD who are not on dialysis. Two groups of subjects will be enrolled into the study: Group 1: recombinant human erythropoietin (rhEPO) naive subjects; Group 2: rhEPO users, who are currently receiving rhEPO. Subjects who are rhEPO naive will be randomized to receive either GSK1278863 once daily (QD) or rhEPO in a 3:1 fashion; subjects who are receiving an rhEPO before enrolling (rhEPO users) will be randomized in a 1:1 fashion to GSK1278863 QD or to the control arm. For those randomized to the control arm, the decision around whether the subject requires rhEPO, the selection of the type of rhEPO (if needed) and the choice of rhEPO dose to achieve and maintain Hgb concentrations within the target range should be based on Investigator clinical judgment, with the historical rhEPO dose and the current Hgb value being considered.

Protection of trial subjects:

NA

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 October 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 8
Country: Number of subjects enrolled	Canada: 14
Country: Number of subjects enrolled	Czech Republic: 20
Country: Number of subjects enrolled	Denmark: 3
Country: Number of subjects enrolled	France: 7
Country: Number of subjects enrolled	Germany: 10
Country: Number of subjects enrolled	Hungary: 6
Country: Number of subjects enrolled	Korea, Republic of: 19
Country: Number of subjects enrolled	Poland: 4
Country: Number of subjects enrolled	Russian Federation: 38
Country: Number of subjects enrolled	Spain: 24
Country: Number of subjects enrolled	Sweden: 5
Country: Number of subjects enrolled	United Kingdom: 7
Country: Number of subjects enrolled	United States: 45
Country: Number of subjects enrolled	Japan: 42

Worldwide total number of subjects	252
EEA total number of subjects	86

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	93
From 65 to 84 years	149
85 years and over	10

Subject disposition

Recruitment

Recruitment details:

Two groups of participants (par.) were enrolled in this study. Group 1 consisted of recombinant human erythropoietin (rhEPO)-naive par. whereas Group 2 consisted of rhEPO users.

Pre-assignment

Screening details:

Post screening, eligible par. were randomized to receive either GSK1278863 once a day (QD) or to the Control arm in a 3:1 fashion in Group 1 and 1:1 fashion in Group 2.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	rhEPO-Naive GSK1278863

Arm description:

RhEPO-naive participants were randomly assigned to receive GSK1278863 QD for 24 weeks. Participants were blinded to the dose-level they received throughout the study. At Week 24, participants stopped taking GSK1278863, and returned for the follow-up visit at Week 28.

Arm type	Experimental
Investigational medicinal product name	GSK1278863 tablet
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received GSK1278863 once daily for 24 weeks and were blinded to the dose-level they received throughout the study. Blinding was maintained by providing the required dose in an appropriate combination of GSK1278863 and/or placebo tablets.

Investigational medicinal product name	Placebo to match GSK1278863 tablet
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received GSK1278863 once daily for 24 weeks and were blinded to the dose-level they received throughout the study. Blinding was maintained by providing the required dose in an appropriate combination of GSK1278863 and/or placebo tablets.

Arm title	rhEPO-Naive Control
------------------	---------------------

Arm description:

RhEPO-naive participants were randomly assigned to receive open-label rhEPO (epoetins or their biosimilars, or darbepoetin) as necessary per standard of care, based on the Investigator's clinical judgment, for 24 weeks. At Week 24, participants stopped taking rhEPO (if applicable) and remained off rhEPO or other Erythropoiesis Stimulating Agents (ESA) until at least the follow-up visit at Week 28.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Standard of care including RhEPO if needed
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Cutaneous use, Intravenous use
Dosage and administration details: Standard of care provided accordingly.	
Arm title	rhEPO-User GSK1278863

Arm description:

RhEPO users were randomly assigned to receive GSK1278863 QD for 24 weeks. Participants were blinded to the dose-level they received throughout the study. At Week 24, participants stopped taking GSK1278863 and did not re-start rhEPO or other ESAs until after the follow-up visit at Week 28 (except in cases where there was a compelling clinical reason [based on Investigator's opinion] to start rhEPO therapy).

Arm type	Experimental
Investigational medicinal product name	GSK1278863 tablet
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received GSK1278863 once daily for 24 weeks and were blinded to the dose-level they received throughout the study. Blinding was maintained by providing the required dose in an appropriate combination of GSK1278863 and/or placebo tablets.

Investigational medicinal product name	Placebo to match GSK1278863 tablet
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received GSK1278863 once daily for 24 weeks and were blinded to the dose-level they received throughout the study. Blinding was maintained by providing the required dose in an appropriate combination of GSK1278863 and/or placebo tablets.

Arm title	rhEPO-User Control
------------------	--------------------

Arm description:

RhEPO users were randomly assigned to receive rhEPO (epoetins or their biosimilars, or darbepoetin) as necessary per standard of care, based on the Investigator clinical judgment, for 24 weeks. Participants were allowed to continue rhEPO therapy between Week 24 and 28.

Arm type	Active comparator
Investigational medicinal product name	Standard of care include RhEPO if needed
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Cutaneous use, Intravascular use

Dosage and administration details:

Standard of care provided accordingly.

Primary: Summary of hemoglobin (Hgb) concentration at Week 24

End point title	Summary of hemoglobin (Hgb) concentration at Week 24 ^[1]
End point description: The original Hgb target range was 9.0 to 10.5 g/dL for Group 1- rhEPO naive participants with a stable baseline Hgb of 8.0-10.0 g/dL and for Group 2- rhEPO users with a stable baseline Hgb of 9.0-10.5. The amended Hgb target range was 10.0 to 11.5 g/dL for Group 1- rhEPO naive participants with a stable baseline Hgb of 8.0-11.0 g/dL and Group 2- rhEPO users with a stable baseline Hgb of 9.0-11.5 g/dL. Data are presented for those participants following the original criteria ("Original") and those following the amended ("Amended") criteria. Intent-to-Treat (ITT): The ITT population consisted of all randomized participants who received at least one dose of study drug, had a Baseline and at least one corresponding on-treatment assessment. Only participants who were available at the indicated time point were analyzed.	
End point type	Primary
End point timeframe: Week 24	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There are no statistical analyses to report for this outcome measure.

Secondary: Percentage of time within, below, and above hemoglobin (Hgb) target range, between Weeks 12 and 24

End point title	Percentage of time within, below, and above hemoglobin (Hgb) target range, between Weeks 12 and 24
-----------------	--

End point description:

The number of days a participant's Hgb was within target range was calculated by estimating (using linear interpolation) the number of days within target range between two scheduled Hgb visits. Percentage of time within range for a participant was calculated by dividing the total number of days that Hgb was within range during Weeks 12 to 24 by the total number of days the participant remained on treatment during Weeks 12 to 24. Similarly, percent of time above and below Hgb target range was calculated. Target range was defined as: Original Hgb Criteria of 9.0 to 10.5 g/dL, and Amended Hgb Criteria of 10.0 to 11.5 g/dL. Sites in the USA used 9.0 to 10.5 g/dL. ITT population. Only participants with data available at specific time points were analyzed.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events (AEs) and serious adverse events (SAEs) were collected from the start of study treatment until the follow-up contact (up to 28 weeks).

Adverse event reporting additional description:

AEs and SAEs were collected from participants of the safety population, comprised of all participants who received at least one dose of study drug.

Assessment type	Systematic

Reporting groups

Reporting group title	rhEPO-Naive GSK1278863
-----------------------	------------------------

Reporting group description:

RhEPO-naive participants were randomly assigned to receive GSK1278863 QD for 24 weeks. Participants were blinded to the dose-level they received throughout the study. At Week 24, participants stopped taking GSK1278863, and returned for the follow-up visit at Week 28.

Reporting group title	rhEPO-Naive Control
-----------------------	---------------------

Reporting group description:

RhEPO-naive participants were randomly assigned to receive open-label rhEPO (epoetins or their biosimilars, or darbepoetin) as necessary per standard of care, based on the Investigator's clinical judgment, for 24 weeks. At Week 24, participants stopped taking rhEPO (if applicable) and remained off rhEPO or other Erythropoiesis Stimulating Agents (ESA) until at least the follow-up visit at Week 28.

Reporting group title	rhEPO-User GSK1278863
-----------------------	-----------------------

Reporting group description:

RhEPO users were randomly assigned to receive GSK1278863 QD for 24 weeks. Participants were blinded to the dose-level they received throughout the study. At Week 24, participants stopped taking GSK1278863 and did not re-start rhEPO or other ESAs until after the follow-up visit at Week 28 (except in cases where there was a compelling clinical reason [based on Investigator's opinion] to start rhEPO therapy).

Reporting group title	rhEPO-User Control
-----------------------	--------------------

Reporting group description:

RhEPO users were randomly assigned to receive rhEPO (epoetins or their biosimilars, or darbepoetin) as necessary per standard of care, based on the Investigator clinical judgment, for 24 weeks. Participants were allowed to continue rhEPO therapy between Week 24 and 28.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 September 2013	To revise the GSK1278863 Dose Adjustment Algorithm as requested by the United States FDA and to clarify and correct language throughout.
03 October 2013	Amendment for Japan only. To revise the Time and Events Table (Table 3) to add a HemoCue and Quest Hgb assessment at Week 2 as requested by PMDA.
23 January 2014	To revise lipid and biomarker assessments, to add reconfirmation of the QTc inclusion criterion at Day 1, to remove requirement for male contraception, to allow an interim cut of data to be taken to facilitate dose modelling, and to make minor clarifications throughout.
04 February 2014	Document version number change only: Change in document number because an error was found after publishing Amendment 03, but before distribution. The error was corrected and the document republished with a new document number.
08 May 2014	To change the Hgb entry criteria and target range for countries outside of the United States, to change the TSAT entry criterion, to clarify that subject who are not able to complete quality of life scales without assistance should not complete the scales, to change to the name of the rhEPO group (now called "the Control arm") as well as to clarify how subjects in the Control arm are to be managed; to make minor clarifications to the analysis section and throughout the document.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
