Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	15 March 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	15 September 2017
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

To compare the progression free survival (PFS) of subjects treated with talazoparib as a monotherapy relative to those treated with protocol-specified physician's choice treatment (PCT).

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trials subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 October 2013
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	28 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 27
Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Brazil: 25
Country: Number of subjects enrolled	France: 50
Country: Number of subjects enrolled	Germany: 31
Country: Number of subjects enrolled	Ireland: 6

Country: Number of subjects enrolled	Russian Federation: 9
Country: Number of subjects enrolled	Spain: 35
Country: Number of subjects enrolled	Taiwan: 1
Country: Number of subjects enrolled	Ukraine: 1
Country: Number of subjects enrolled	United Kingdom: 15
Country: Number of subjects enrolled	United States: 156
Worldwide total number of subjects	431
EEA total number of subjects	161

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	394
From 65 to 84 years	35
85 years and over	2

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Data reported is based on the primary analysis date of 15-Sep-2017.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Talazoparib

Arm description:

Subjects received talazoparib 1 milligram (mg), orally, once daily, until radiographic disease progression as determined by the central independent radiology facility (IRF), unacceptable toxicity, consent withdrawal, physician's decision to terminate treatment, or Sponsor's decision to terminate the trial (up to a maximum of 53 cycles, each cycle was of 21 days).

Arm type	Experimental
Investigational medicinal product name	Talazoparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received talazoparib 1 mg, orally, once daily, until radiographic disease progression as determined by the central independent radiology facility (IRF), unacceptable toxicity, consent withdrawal, physician's decision to terminate treatment, or Sponsor's decision to terminate the trial (up to a maximum of 53 cycles, each cycle was of 21 days).

Arm title	Physician's Choice Treatment
------------------	------------------------------

Arm description:

Subjects received 1 of the following drugs in specified regimens, as per the physician's choice: 1) capecitabine 1250 milligram per meter square (mg/m^2) orally twice daily on Day 1 to 14 in each cycle; 2) eribulin mesylate $1.4 \text{ mg}/\text{m}^2$ (equivalent to eribulin $1.23 \text{ mg}/\text{m}^2$), as 2 to 5 minute intravenous (IV) infusion on Day 1 and 8 in each cycle; 3) gemcitabine $1250 \text{ mg}/\text{m}^2$ as 30-minute IV infusion on Day 1 and 8 in each cycle; 4) vinorelbine $30 \text{ mg}/\text{m}^2$ as 6 to 10 minute IV infusion on Day 1, 8, and 15 in each cycle; until radiographic disease progression as determined by the central IRF, unacceptable toxicity, consent withdrawal, physician's decision to terminate treatment, or Sponsor's decision to terminate the trial (up to a maximum of 53 cycles, each cycle was of 21 days).

Arm type	Active comparator
Investigational medicinal product name	Capecitabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received Capecitabine 1250 milligram per meter square (mg/m^2) orally twice daily on Day 1 to 14 for 21 day cycle, as per the physician's choice, until radiographic disease progression as determined by the central independent radiology facility (IRF), unacceptable toxicity, consent withdrawal, physician's decision to terminate treatment, or Sponsor's decision to terminate the trial (up to a maximum of 53 cycles, each cycle was of 21 days).

Investigational medicinal product name	Eribulin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received Eribulin mesylate 1.4 mg/m² (equivalent to eribulin 1.23 mg/ m²), as 2 to 5 minute intravenous (IV) infusion on Day 1 and 8 for 21 day cycle, as per the physician's choice, until radiographic disease progression as determined by the central independent radiology facility (IRF), unacceptable toxicity, consent withdrawal, physician's decision to terminate treatment, or Sponsor's decision to terminate the trial (up to a maximum of 53 cycles, each cycle was of 21 days).

Investigational medicinal product name	Gemcitabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received Gemcitabine 1250 mg/m² as 30-minute IV infusion on Day 1 and 8 for 21 day cycle, as per the physician's choice, until radiographic disease progression as determined by the central independent radiology facility (IRF), unacceptable toxicity, consent withdrawal, physician's decision to terminate treatment, or Sponsor's decision to terminate the trial (up to a maximum of 53 cycles, each cycle was of 21 days).

Investigational medicinal product name	Vinorelbine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received Vinorelbine 30 mg/m² as 6 to 10 minute IV infusion on Day 1, 8, and 15 for 21 day cycle, as per the physician's choice, until radiographic disease progression as determined by the central independent radiology facility (IRF), unacceptable toxicity, consent withdrawal, physician's decision to terminate treatment, or Sponsor's decision to terminate the trial (up to a maximum of 53 cycles, each cycle was of 21 days).

Primary: Progression-Free Survival (PFS): Independent Radiological Facility (IRF) Assessment

End point title	Progression-Free Survival (PFS): Independent Radiological Facility (IRF) Assessment
End point description:	
IRF assessed PFS was defined as time (in months) from randomization until the date of first documented radiologic progressive disease per response evaluation criteria in solid tumors (RECIST) version 1.1 or death from any cause, whichever occurs first. As per RECIST v1.1, progression defined as 1) for target lesions: at least a 20% increase in the sum of target lesion measurements, compared to the smallest sum on study (including baseline), the absolute increase in the sum has to be at least 5 millimetre (mm); 2) for non-target lesions: unequivocal progression of non-target lesions, evaluated as a whole, such that it is clear that treatment has failed and disease is progressing, regardless of the status of the target lesions; 3) and/or appearance of one or more new lesions. The analysis was performed by Kaplan-Meier method. Intent-to-treat (ITT) analysis population included all randomized subjects.	
End point type	Primary
End point timeframe:	
Baseline until radiologic progressive disease or death due to any cause (up to maximum duration of 36.9 months)	

End point values	Talazoparib	Physician's Choice Treatment		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	287	144		
Units: months				
median (confidence interval 95%)	8.6 (7.2 to 9.3)	5.6 (4.2 to 6.7)		

Statistical analyses

Statistical analysis title	Talazoparib versus Physician's Choice Treatment
Statistical analysis description:	
Hazard ratio was based on stratified Cox regression model with treatment as the only covariate (stratification factors: number of prior cytotoxic chemotherapy regimens, triple negative status, history of central nervous system metastasis status).	
Comparison groups	Talazoparib v Physician\'s Choice Treatment
Number of subjects included in analysis	431
Analysis specification	Pre-specified
Analysis type	other
P-value	< 0.0001
Method	Logrank

level	95 %
sides	2-sided
lower limit	0.413
upper limit	0.711

Secondary: Percentage of Subjects With Objective Response: Investigator Assessment

End point title	Percentage of Subjects With Objective Response: Investigator Assessment
End point description:	
Investigator assessed overall response was defined as the percentage of subjects with a partial response (PR) or complete response (CR) as defined by RECIST v1.1. For target lesions: 1) CR: disappearance of all non-nodal target lesions. Target lymph nodes must reduce to less than 10 mm in short axis. 2) PR: At least a 30% decrease in the sum of diameters of target lesions, compared to the sum at baseline. For non-target lesions, CR: disappearance of all non-target lesions. ITT analysis population included all randomized subjects. Percentage of subjects with objective response reported are based upon unconfirmed CR/PR. ITT with measurable disease analysis population included all subjects in the ITT population who had at least 1 target lesion identified at baseline.	
End point type	Secondary
End point timeframe:	
Baseline until radiologic progressive disease or death due to any cause (up to a maximum duration of 36.9 months)

Secondary: Trough Plasma Talazoparib Concentrations

End point title	Trough Plasma Talazoparib Concentrations ^[1]
-----------------	---

End point description:

A predose PK sample was considered dose-compliant based on the following criteria: A subject must have received 21 consecutive days of 1 mg talazoparib without dosing interruption prior to sample collection; and the predose PK sample must have been collected 24 hours +/- 10% (2 hours and 24 minutes) after the previous day's dose and no more than 5 minutes (0.083 hours) after the administration of the dose on the day of PK sample collection. Analysis population included subjects who received at least 1 dose of talazoparib and had dose compliant pharmacokinetic (PK) predose sample. Here, "n" signifies number of subjects who were evaluable for the specified categories. This endpoint was not planned to be analyzed for the reporting arm "Physician's Choice Treatment".

End point type	Secondary
----------------	-----------

End point timeframe:

Predose on Day 1 of Cycle 2, 3 and 4

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint was planned to be analyzed only for reporting arm "Talazoparib"

Secondary: Number of Subjects With Treatment-emergent Adverse Events (TEAEs) and Serious Adverse Events (SAEs)

End point title	Number of Subjects With Treatment-emergent Adverse Events (TEAEs) and Serious Adverse Events (SAEs)
End point description:	
An AE was any untoward medical occurrence (eg, sign, symptom, illness, disease or injury) in a subject administered study drug or other protocol-imposed intervention, regardless of attribution. SAE was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. Treatment-emergent are events between first dose of study drug and up to primary analysis data cut-off date or the day before initiation of a new antineoplastic therapy or 30 days after the date of the last dose date of study drug, whichever occurred first, that were absent before treatment or that worsened relative to pretreatment (up to 36.9 months) state. AEs included both SAEs and non-SAEs. Safety analysis population.

Secondary: Number of Subjects With Grade 3 or 4 Postbaseline Toxicities in Laboratory Parameters: Hematology

End point title	Number of Subjects With Grade 3 or 4 Postbaseline Toxicities in Laboratory Parameters: Hematology
End point description:	
Toxicity grades were evaluated based on as National Cancer Institute Common Toxicity Criteria for Adverse Events Version 4.03 (NCI CTCAE v4.03). NCI CTCAE v4.03 defined the severity grade as: grade 1 (mild), grade 2 (moderate), grade 3 (severe) and grade 4 (potentially life threatening) and grade 5 (death related to AE) for each parameter. Key hematology parameters included hemoglobin (gram per liter [g/L]), leukocytes (10^6 cells per liter), lymphocytes (10^6 cells per liter), neutrophils (10^6 cells per liter), and platelets (10^9 cells per liter). Low value indicated lower values than the baseline values and high value indicated higher values than the baseline values. Only those categories in which at least 1 subject had data were reported. Safety analysis population included all subjects who received at least 1 dose of any study drug (talazoparib or protocol-specified PCT).	
End point type	Secondary

Statistical analyses

No statistical analyses for this end point

Other pre-specified: Change From Baseline in Global Health Status/Quality of Life (QoL) Measured by European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Core 30 (EORTC QLQ-C30) for Overall Duration

(Averaged of Week 4 to 160)

End point title	Change From Baseline in Global Health Status/Quality of Life (QoL) Measured by European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Core 30 (EORTC QLQ-C30) for Overall Duration (Averaged of Week 4 to 160)
-----------------	--

End point description:

EORTC QLQ-C30: 30 questions to assess subject QoL. First 28 questions: 5 functional scales (physical, role, cognitive, emotional, social), 3 symptom scales (fatigue, nausea and vomiting, pain) and other single items (dyspnea, appetite loss, insomnia, constipation, diarrhea and financial difficulties). Each question assessed on 4-point scale (1=not at all, 2=a little, 3=quite a bit, 4=very much); functional scale: higher score=better level of functioning; symptom scale: higher score=more severe symptoms. Last 2 questions: GHS/QoL. Each question assessed on 7-point scale 1 (very poor)-7 (excellent). Score averaged, transformed to 0-100 scale; higher score=better QoL. Patient-reported outcomes (PRO) evaluable population: all subjects who completed PRO questionnaire at baseline and at least 1 visit postbaseline.

End point type	Other pre-specified
----------------	---------------------

End point timeframe:

Baseline, Week 4 up to Week 160 (Overall Duration)

End point values	Talazoparib	Physician's Choice Treatment		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	262	114		
Units: units on scale				
arithmetic mean (confidence interval 95%)	3.0 (1.2 to 4.8)	-5.4 (-8.8 to -2.0)		

Statistical analyses

Statistical analysis title	Talazoparib versus Physician's Choice Treatment
-----------------------------------	---

Statistical analysis description:

Analysis was based on repeated measures mixed-effect model with an intercept term, treatment, time, treatment-by-time, and baseline as covariate. Analysis was based on restricted maximum likelihood using unstructured covariance matrix.

Comparison groups	Talazoparib v Physician's Choice Treatment
Number of subjects included in analysis	376
Analysis specification	Pre-specified
Analysis type	other
P-value	< 0.0001
Method	Mixed models analysis
Parameter estimate	Mean difference (final values)
Point estimate	8.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	4.6
upper limit	12.3

Other pre-specified: Time to Deterioration (TTD) in Global Health Status (GHS)/Quality of Life (QOL)

End point title	Time to Deterioration (TTD) in Global Health Status (GHS)/Quality of Life (QOL)
-----------------	---

End point description:

TTD in global health status (GHS)/QoL=time (in months) from randomization to the first observation with ≥ 10 point decrease and no subsequent observations with < 10 point decrease from baseline in GHS/QoL score based on EORTC-QLQ-C30. EORTC QLQ-C30 is a cancer-specific instrument with 30 questions to assess participant quality of life. Question 29 and 30 were used to evaluate GHS/QoL. Each question was assessed on a 7-point scale (1=very poor to 7=excellent). Scores averaged, transformed to 0-100 scale; higher score=better quality of life/better level of functioning. Here, 99999 = upper 95% CI was not estimable, since only few subjects had event. PRO-evaluable population included all participants who completed the PRO questionnaire at baseline and at least 1 visit postbaseline.

End point type	Other pre-specified
----------------	---------------------

End point timeframe:

Baseline up to a maximum duration of 36.9 months

End point values	Talazoparib	Physician's Choice Treatment

Other pre-specified: Time to Deterioration (TTD) in Breast Symptoms Scale as Assessed by the European Organization for the Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module (EORTC-QLQ-BR23)

End point title	Time to Deterioration (TTD) in Breast Symptoms Scale as Assessed by the European Organization for the Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module (EORTC-QLQ-BR23)
-----------------	--

End point description:

TTD was defined as the time from randomization to the first observation with a ≥ 10 point increase and no subsequent observations with a < 10 point increase from baseline in breast symptom score based on the EORTC-QLQ-BR23. EORTC-QLQ-BR23 is a disease-specific module for breast cancer developed as a supplement for the EORTC-QLQ-C30 to assess the quality of life of subjects with breast cancer. EORTC-QLQ-BR23 symptoms subscale includes 4 items: systemic therapy side effects, breast symptoms, arm symptoms, upset by hair loss. Each item is rated by choosing 1 of 4 possible responses that record the level of intensity (1= not at all, 2= a little, 3= quite a bit, and 4= very much) within each scale. PRO-evaluable population included all subjects who completed the PRO questionnaire at baseline and at least 1 visit postbaseline. Here, 99999 = median and 95% CI was not estimable due to the low number of subjects with event.

End point type	Other pre-specified

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline up to a maximum duration of 36.9 months

Adverse event reporting additional description:

Same event may appear as both an AE and a SAE. However, what is presented are distinct events. An event may be categorized as serious in one subject and as non-serious in another subject, or one subject may have experienced both a serious and non-serious event during the study. AEs and SAEs were collected for safety population.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Physician's Choice Treatment
-----------------------	------------------------------

Reporting group description:

Subjects received 1 of the following drugs in specified regimens, as per the physician's choice: 1) capecitabine 1250 milligram per meter square (mg/m²) orally twice daily on Day 1 to 14 in each cycle; 2) eribulin mesylate 1.4 mg/m² (equivalent to eribulin 1.23 mg/ m²), as 2 to 5 minute intravenous (IV) infusion on Day 1 and 8 in each cycle; 3) gemcitabine 1250 mg/m² as 30-minute IV infusion on Day 1 and 8 in each cycle; 4) vinorelbine 30 mg/m² as 6 to 10 minute IV infusion on Day 1, 8, and 15 in each cycle; until radiographic disease progression as determined by the central IRF, unacceptable toxicity, consent withdrawal, physician's decision to terminate treatment, or Sponsor's decision to terminate the trial (up to a maximum of 53 cycles, each cycle was of 21 days).

Reporting group title	Talazoparib
-----------------------	-------------

Reporting group description:

Subjects received talazoparib 1 mg, orally, once daily in each 21-day cycle until radiographic disease progression as determined by the central independent radiology facility (IRF), unacceptable toxicity, consent withdrawal, physician's decision to terminate treatment, or Sponsor's decision to terminate the trial.
