Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 July 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	28 July 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective was to evaluate the effect of steady-state Simeprevir (SMV) and Daclatasvir (DCV) on the steady-state pharmacokinetics of cyclosporine and tacrolimus when administered as a regimen containing SMV [150 milligram once a day (mg qd)] , DCV (60 mg qd) and Ribavirin (RBV) (1,000 to 1,200 mg per day) in post-orthotopic liver transplantation (OLT) subjects with recurrent hepatitis C virus (HCV) genotype 1b infection and to evaluate the efficacy of a 24-week treatment regimen containing SMV, DCV, and RBV with respect to the proportion of HCV genotype 1b infected post- OLT subjects achieving sustained virologic response 12 weeks after end of treatment (EOT) (SVR12).

Protection of trial subjects:

The trial was performed in accordance with the principles of good clinical practices [GCP] as outlined in 21 code of federal regulations [CFR] Parts 50, 56, and 312 and the Declaration of Helsinki and its subsequent revisions, and the European Union Clinical Trials Directive that are consistent with Good Clinical Practices and applicable regulatory requirements. During the study, various safety evaluations were performed at different timepoints like clinical laboratory assessments (hematology, serum chemistry and urinalysis), vital signs, 12-lead electrocardiograms (ECGs) and physical examination, all adverse events were reported from signing the informed consent until the follow-up visit.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 December 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 7
Country: Number of subjects enrolled	Spain: 12
Country: Number of subjects enrolled	Italy: 9
Country: Number of subjects enrolled	Poland: 7
Worldwide total number of subjects	35
EEA total number of subjects	35

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	26
From 65 to 84 years	9
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The study was conducted in 2 parts (Part 1 and Part 2). Total 21 subjects were included in Part 1 and 14 subjects were included in Part 2 of the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cyclosporine

Arm description:

Subjects received Cyclosporine as stable immunosuppressant therapy. The subjects also received Simeprevir (SMV) 150 milligram (mg) capsule administered once daily with food, Daclatasvir (DCV) 60 mg tablet once daily and Ribavirin (RBV) 1,000 or 1,200 mg/day (bid regimen) tablet (5/6 x 200 mg) with food for 24 weeks.

Arm type	Immunosuppressant therapy
Investigational medicinal product name	Cyclosporine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received Cyclosporine as stable immunosuppressant therapy.

Investigational medicinal product name	Simeprevir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received Simeprevir (SMV) 150 milligram (mg) capsule administered once daily with food for 24 weeks.

Investigational medicinal product name	Daclatasvir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received Daclatasvir (DCV) 60 mg tablet once daily for 24 weeks.

Investigational medicinal product name	Ribavirin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received Ribavirin (RBV) 1,000 or 1,200 mg/day (bid regimen) tablet (5/6 x 200 mg) with food for 24 weeks.

Arm title	Tacrolimus
------------------	------------

Arm description:

Subjects received Tacrolimus as stable immunosuppressant therapy. The subjects also received Simeprevir (SMV) 150 milligram (mg) once daily capsule administered with food, Daclatasvir (DCV) 60 mg once daily tablet and Ribavirin (RBV) 1,000 or 1,200 mg/day (bid regimen) tablet (5/6 x 200 mg) with food for 24 weeks.

Arm type	Immunosuppressant therapy.
Investigational medicinal product name	Tacrolimus
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received Tacrolimus as stable immunosuppressant therapy.

Investigational medicinal product name	Simeprevir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received Simeprevir (SMV) 150 milligram (mg) capsule administered once daily with food for 24 weeks.

Investigational medicinal product name	Daclatasvir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received Daclatasvir (DCV) 60 mg tablet once daily for 24 weeks.

Investigational medicinal product name	Ribavirin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received Ribavirin (RBV) 1,000 or 1,200 mg/day (bid regimen) tablet (5/6 x 200 mg) with food for 24 weeks.

Number of subjects in period 1	Cyclosporine	Tacrolimus
Started	10	25
Completed	10	23
Not completed	0	2
Adverse event, serious fatal	-	1

Consent withdrawn by subject	-	1

End points

End points reporting groups

Reporting group title	Cyclosporine
Reporting group description: Subjects received Cyclosporine as stable immunosuppressant therapy. The subjects also received Simeprevir (SMV) 150 milligram (mg) capsule administered once daily with food, Daclatasvir (DCV) 60 mg tablet once daily and Ribavirin (RBV) 1,000 or 1,200 mg/day (bid regimen) tablet (5/6 x 200 mg) with food for 24 weeks.	
Reporting group title	Tacrolimus
Reporting group description: Subjects received Tacrolimus as stable immunosuppressant therapy. The subjects also received Simeprevir (SMV) 150 milligram (mg) once daily capsule administered with food, Daclatasvir (DCV) 60 mg once daily tablet and Ribavirin (RBV) 1,000 or 1,200 mg/day (bid regimen) tablet (5/6 x 200 mg) with food for 24 weeks.	
Subject analysis set title	Simeprevir
Subject analysis set type	Sub-group analysis
Subject analysis set description: The Pharmacokinetic (PK) population included all randomized subjects who received at least 1 dose of Simeprevir (Part 1 and Part 2) and with serial PK Blood samples.	
Subject analysis set title	Daclatasvir
Subject analysis set type	Sub-group analysis
Subject analysis set description: The Pharmacokinetic (PK) population included all randomized subjects who received at least 1 dose of Daclatasvir (Part 1 and Part 2) and with serial PK Blood samples.	

Primary: Percentage of Subjects With A Sustained Virologic Response (SVR)12 Weeks After The End of Treatment

End point title	Percentage of Subjects With A Sustained Virologic Response (SVR)12 Weeks After The End of Treatment ^[1]
End point description: Sustained Virologic Response (SVR) 12 is defined as the proportion of subjects (ITT analysis set) hepatitis C virus HCV RNA < 25 IU/mL detectable or undetectable at 12 weeks after the end of treatment. Intend to treat (ITT) population includes subjects who received at least 1 dose of investigational medication (SMV, DCV and/or RBV).	
End point type	Primary
End point timeframe: Week 36	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Descriptive statistical analysis has been performed for this endpoint.

Secondary: Percentage of Subjects With A Sustained Virologic Response (SVR) 4 And 24 Weeks After The End of Treatment

End point title	Percentage of Subjects With A Sustained Virologic Response (SVR) 4 And 24 Weeks After The End of Treatment
-----------------	--

End point description:

SVR 4 and SVR 24 are defined as the proportion of subjects with HCV RNA <25 IU/mL detectable or undetectable at the hepatitis C virus (HCV) ribonucleic acid (RNA) <25 IU/mL detectable or undetectable at week 4 or week 24 after the end of treatment, respectively. Intent to treat (ITT) population includes subjects who received at least 1 dose of investigational medication (SMV, DCV and/or RBV).

End point type	Secondary
End point timeframe:	
Week 28 and 48	

End point values	Cyclosporine	Tacrolimus		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	10	25		
Units: Percentage of subjects				
number (confidence interval 95%)				
SVR 4	100 (69.2 to 100)	88 (68.8 to 97.5)		
SVR 24	100 (69.2 to 100)	88 (68.8 to 97.5)		

Statistical analyses

No statistical analyses for this end point

Secondary: On-Treatment Virologic Response With Undetectable HCV RNA (less than 25 IU/mL undetectable) and HCV RNA Detectable Less Than 25 IU/mL Detectable

End point title	On-Treatment Virologic Response With Undetectable HCV RNA (less than 25 IU/mL undetectable) and HCV RNA Detectable Less Than 25 IU/mL Detectable
-----------------	--

End point description:

Rapid virologic response (RVR), defined as undetectable HCV RNA at Week 4 of treatment; extended rapid virologic response (eRVR), defined as undetectable HCV RNA at Week 4 and Week 12 of treatment and complete early virologic response (cEVR), defined as undetectable HCV RNA at Week 12. RVR signifies Rapid virologic response: undetectable HCV RNA at Week 4 while on treatment. cEVR signifies Complete early rapid virologic response: undetectable HCV RNA at Week 12 while on treatment. eRVR signifies extended Rapid Virologic Response: undetectable HCV RNA at Week 4 and Week 12 while on treatment. Intent to treat (ITT) population includes subjects who received at least 1 dose of investigational medication (SMV, DCV and/or RBV).

End point type	Secondary
End point timeframe:	
Up to end of treatment (Weeks 2, 4, 12, and 24)	

End point values	Cyclosporine	Tacrolimus		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	10	25		
Units: International Unit per milliliter(IU/mL)				
number (not applicable)				
Week 2 (<25 IU/mL detectable)	3	9		
Week 2 (<25 IU/mL undetectable)	1	3		
Week 4 (<25 IU/mL detectable)	3	6		
Week 4 (<25 IU/mL undetectable)(RVR)	7	17		

Week 12 (<25 IU/mL undetectable) (cEVR)	10	24		
Week 24 (<25 IU/mL undetectable)	10	21		
Week 4 and Week 12 (<25 IU/mL undetectable) (eRVR)	7	16		
EOT (<25 IU/mL undetectable)	10	22		

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Subjects With On-Treatment Failure After Treatment With Regimen Simeprevir, Daclatasvir and RBV

End point title	Number of Subjects With On-Treatment Failure After Treatment With Regimen Simeprevir, Daclatasvir and RBV
-----------------	---

End point description:

On-treatment failure is defined as HCV RNA level is greater than or equal to 25 IU/mL at end of treatment. Intent to treat (ITT) population includes subjects who received at least 1 dose of investigational medication (SMV, DCV and/or RBV).

End point type	Secondary
----------------	-----------

End point timeframe:

Screening, Baseline and Week 1 to 24

End point values	Cyclosporine	Tacrolimus		
Subject group type	Reporting group	Reporting group

Units: Number of subjects	0	3		

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Subjects With Adverse Events

End point title	Number of Subjects With Adverse Events
-----------------	--

End point description:

An AE is any untoward medical occurrence in a subject who received study drug without regard to possibility of causal relationship. An SAE is an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. Safety population included all randomized subjects who received at least 1 dose of the study drug.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to 48 Weeks

Reporting groups

Reporting group title	Cyclosporine
-----------------------	--------------

Reporting group description:

Subjects received Cyclosporine as stable immunosuppressant therapy. The subjects also received Simeprevir (SMV) 150 milligram (mg) capsule administered once daily with food, Daclatasvir (DCV) 60 mg tablet once daily and Ribavirin (RBV) 1,000 or 1,200 mg/day (bid regimen) tablet (5/6 x 200 mg) with food for 24 weeks.

Reporting group title	Tacrolimus
-----------------------	------------

Reporting group description:

Subjects received Tacrolimus as stable immunosuppressant therapy. The subjects also received Simeprevir (SMV) 150 milligram (mg) capsule administered once daily with food, Daclatasvir (DCV) 60 mg tablet once daily and Ribavirin (RBV) 1,000 or 1,200 mg/day (bid regimen) tablet (5/6 x 200 mg) with food for 24 weeks.

Reporting group title	Overall
-----------------------	---------

Reporting group description:

All the subjects received Simeprevir (SMV) 150 milligram (mg) capsule administered once daily with food, Daclatasvir (DCV) 60 mg tablet once daily and Ribavirin (RBV) 1,000 or 1,200 mg/day (bid regimen) tablet (5/6 x 200 mg) with food for 24 weeks.

Reporting group title	Cyclosporine Follow-Up
-----------------------	------------------------

Reporting group description:

Subjects received Cyclosporine as stable immunosuppressant therapy. Follow-up Period after treatment with Simeprevir (SMV) 150 milligram (mg) capsule administered once daily with food, Daclatasvir (DCV) 60 mg tablet once daily and Ribavirin (RBV) 1,000 or 1,200 mg/day (bid regimen) tablet (5/6 x 200 mg)with food for 24 weeks after the treatment has been stopped.

Reporting group title	Tacrolimus Follow-Up
-----------------------	----------------------

Reporting group description:

Subjects received tacrolimus as stable immunosuppressant therapy. Follow-up Period after treatment with Simeprevir (SMV) 150 milligram (mg) capsule administered once daily with food, Daclatasvir (DCV) 60 mg tablet once daily and Ribavirin (RBV) 1,000 or 1,200 mg/day (bid regimen) tablet (5/6 x 200 mg)with food for 24 weeks after the treatment has been stopped.

Reporting group title	Overall Follow-Up
-----------------------	-------------------

Reporting group description:

Follow-up Period after treatment with Simeprevir (SMV) 150 milligram (mg) capsule administered once daily with food, Daclatasvir (DCV) 60 mg tablet once daily and Ribavirin (RBV) 1,000 or 1,200 mg/day (bid regimen) tablet (5/6 x 200 mg) with food for 24 weeks after the treatment has been stopped.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 September 2013	The amendment included the addition of precautionary language on photosensitivity to the Prohibitions and Restrictions section of the protocol. As a follow-up to a recommendation by the US Food and Drug Administration (FDA), it was decided to reintroduce the recommendations with regard to photosensitivity, in all Simeprevir (SMV) studies in which subjects were still being dosed with SMV and in future SMV studies.
30 June 2014	The amendment included changes based on Day 14 pharmacokinetic results from subjects enrolled in Part 1 of the study, subjects who received cyclosporine as immunosuppressant therapy were excluded from Part 2 of the study. Repeat intensive pharmacokinetic sampling to be performed in those Part 1 subjects receiving cyclosporine and whose Simeprevir (SMV) doses were adjusted was added. Repeat intensive pharmacokinetic sampling for SMV and Daclatasvir (DCV) in Part 2 subjects was added in case revision to the dose and/or dosing regimen of SMV and/or DCV were made based on the Week 4 interim analyses. Given the fact that, after review of the Phase 3 data, elevations in direct and indirect bilirubin observed in Phase 3 clinical studies were not considered clinically relevant, specific management of grade 4 isolated bilirubin elevations was updated. Subjects with isolated grade 4 bilirubin elevation in absence of evidence of hepatic decompensation could continue intake of study medication with close monitoring of further increases in bilirubin, or discontinue, at the discretion of the investigator. In addition, rash management guidelines were clarified for photosensitivity conditions. Background information on the study drug was updated (replacement HPC2002 data with data from Phase 2 study AI-444-062) and marketing status of SMV was added (approval US and other regions and ongoing procedures worldwide). Definitions of SVR and treatment failure were revised as per Health Authority recommendations. Clarification that the screening period of 4 weeks started from the time of signing the Informed Consent Form (ICF) was added. The possibility to have additional interim analyses for Health Authority submission and publication purpose was added. It was clarified that one hepatitis C virus (HCV RNA) retest had to be performed as soon as possible if Week 4 HCV RNA is >100 IU/mL and that subjects could continue study drug if HCV RNA is ≤100 International Unit per at the retest.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
