

## Clinical trial results:

### A Phase IIb, Multi-Center, Long-Term Extension Trial to Evaluate the Safety and Tolerability of Atacicept in Subjects with Systemic Lupus Erythematosus (SLE) who Completed Protocol EMR-700461-023 (ADDRESS II)

#### Summary

EudraCT number	2013-002758-62
Trial protocol	DE IT BG CZ GB ES
Global end of trial date	09 February 2018

#### Results information

Result version number	v1
This version publication date	24 February 2019
First version publication date	24 February 2019

#### Trial information

##### Trial identification

Sponsor protocol code	700461-024
-----------------------	------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02070978
WHO universal trial number (UTN)	-

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 February 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	09 February 2018
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

This is a multicenter, double-blind, Phase 2b, long-term extension (LTE) to the ADDRESS II core trial (EMR 700461-023) (NCT01972568), to evaluate long-term safety and tolerability of atacicept in subjects with systemic lupus erythematosus (SLE).

Protection of trial subjects:

Subject protection was ensured by following high medical and ethical standards in accordance with the principles laid down in the Declaration of Helsinki, and that are consistent with Good Clinical Practice and applicable regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 July 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United States: 45
Country: Number of subjects enrolled	Chile: 18
Country: Number of subjects enrolled	Argentina: 45
Country: Number of subjects enrolled	Mexico: 48
Country: Number of subjects enrolled	Peru: 6
Country: Number of subjects enrolled	Brazil: 2
Country: Number of subjects enrolled	Bulgaria: 26
Country: Number of subjects enrolled	Czech Republic: 5
Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	United Kingdom: 3
Country: Number of subjects enrolled	South Africa: 11
Country: Number of subjects enrolled	Italy: 1
Country: Number of subjects enrolled	Poland: 1
Country: Number of subjects enrolled	Russian Federation: 13
Country: Number of subjects enrolled	Spain: 3
Country: Number of subjects enrolled	Korea, Republic of: 4
Country: Number of subjects enrolled	Philippines: 20
Worldwide total number of subjects	253
EEA total number of subjects	41

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	248
From 65 to 84 years	5
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Subjects who completed 24-week of the ADDRESS II core study (NCT01972568) and didn't meet any discontinuation criteria were enrolled in this long-term extension (LTE) study NCT02070978. The study was conducted at 81 sites in 17 countries in Asia, Europe, North America, Central America, and South America.

### Pre-assignment

Screening details:

Subjects who received placebo in core study ADDRESS II were switched to receive atacicept 150 milligram (mg) as once-weekly subcutaneous injections in LTE study. Subjects who received atacicept 75 mg or 150 mg in core study ADDRESS II continued to receive the respective randomized dosage as once-weekly subcutaneous injections in LTE study.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo/Atacicept 150 mg

Arm description:

Subjects received atacicept 150 mg as once-weekly subcutaneous injection during this LTE study up to a maximum of 97.7 weeks.

Arm type	Experimental
Investigational medicinal product name	Atacicept
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received atacicept 150 mg as once-weekly subcutaneous injection during this LTE study up to a maximum of 97.7 weeks.

<b>Arm title</b>	Atacicept 75 mg
------------------	-----------------

Arm description:

Subjects received atacicept 75 mg as once-weekly subcutaneous injection during this LTE study up to a maximum of 143.7 weeks.

Arm type	Experimental
Investigational medicinal product name	Atacicept
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received atacicept 75 mg as once-weekly subcutaneous injection during this LTE study up to a maximum of 143.7 weeks.

<b>Arm title</b>	Atacicept 150 mg
------------------	------------------

Arm description:

Subjects received atacicept 150 mg as once-weekly subcutaneous injection during this LTE study up to a

maximum of 97.9 weeks.

Arm type	Experimental
Investigational medicinal product name	Atacicept
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received atacicept 150 mg as once-weekly subcutaneous injection during this LTE study up to a maximum of 97.9 weeks.

<b>Number of subjects in period 1</b>	Placebo/Atacicept 150 mg	Atacicept 75 mg	Atacicept 150 mg
Started	83	82	88
Completed	36	29	35
Not completed	47	53	53

## End points

### End points reporting groups

Reporting group title	Placebo/Atacicept 150 mg
Reporting group description: Subjects received atacicept 150 mg as once-weekly subcutaneous injection during this LTE study up to a maximum of 97.7 weeks.	
Reporting group title	Atacicept 75 mg
Reporting group description: Subjects received atacicept 75 mg as once-weekly subcutaneous injection during this LTE study up to a maximum of 143.7 weeks.	
Reporting group title	Atacicept 150 mg
Reporting group description: Subjects received atacicept 150 mg as once-weekly subcutaneous injection during this LTE study up to a maximum of 97.9 weeks.	

### Primary: Number of Subjects With at least one Serious Adverse Event (SAE) During the Treatment Period

End point title	Number of Subjects With at least one Serious Adverse Event (SAE) During the Treatment Period <sup>[1]</sup>
End point description: Adverse event (AE) was defined as any unfavorable & unintended sign, symptom or disease associated use of study drug, whether or not considered related to study drug/worsening of pre-existing medical condition. Serious AE: resulted in any of following outcomes: death; life threatening; persistent/significant disability/incapacity; initial or prolonged inpatient hospitalization; congenital anomaly/birth defect/was otherwise considered medically important. AE was considered as 'treatment emergent' if occurred after first drug of each period/if it was present prior to drug administration but exacerbated after drug administration. Treatment Emergent AEs during treatment period exclude those ongoing at time of study entry into 024 LTE Day 1 & exclude safety follow-up period. The safety analyses set included all participants enrolled into the LTE study and who received at least 1 dose of planned study treatment. Subjects were analyzed according to the actual treatment they received.	
End point type	Primary
End point timeframe: Baseline (LTE Day 1) up to maximum treatment duration of 143.7 weeks	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Only descriptive data was planned to be reported for this endpoint.	

End point values	Placebo/Atacicept 150 mg	Atacicept 75 mg	Atacicept 150 mg	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	83	82	88	
Units: Subjects	13	10	9	

### Statistical analyses

No statistical analyses for this end point

### Primary: Number of Subjects who Prematurely Discontinued the Treatment due to Adverse Events (AEs)

End point title	Number of Subjects who Prematurely Discontinued the Treatment due to Adverse Events (AEs) <sup>[2]</sup>
-----------------	--

End point description:

An Adverse event (AE) was defined as any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease associated with the use of study drug, whether or not considered related to the study drug or worsening of pre-existing medical condition, whether or not related to study drug. TEAEs were defined as events with an onset date on or after the date of first dose of study treatment in the core study and ongoing at the 024 LTE study entry, occurring during the 024 LTE study and the Safety follow-up Period. The safety analyses set included all participants enrolled into the LTE study and who received at least 1 dose of planned study treatment. Subjects were analyzed according to the actual treatment they received.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (Day 1 of Core study) up to maximum duration of 167.7 weeks

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive data was planned to be reported for this endpoint.

## Secondary: Change from Baseline in Systemic Lupus International Collaborating Clinics/American College of Rheumatology (SLICC/ACR) Damage Index Organ Damage Scores

End point title	Change from Baseline in Systemic Lupus International Collaborating Clinics/American College of Rheumatology (SLICC/ACR) Damage Index Organ Damage Scores
-----------------	--

End point description:

SLICC/ACR score or damage index evaluates cumulative damage in Systemic Lupus Erythematosus (SLE). These changes may or may not be related to SLE. Most items are scored only if they have been present for at least 6 months. Scores range from 0 to 47 points, with higher scores indicating greater cumulative damage. Baseline was defined as Day 1 of Core study. Modified intent-to-treat (mITT) analysis set was defined as all enrolled subjects in the LTE study. Efficacy analyses were performed on the mITT analysis set according to randomized treatment. Here "n" signifies those subjects who were evaluable for this endpoint at specified categories.

End point type	Secondary

## Secondary: Change from Baseline in Disease Activity as Measured by British Isles Lupus Assessment Group (BILAG) 2004 Score

End point title	Change from Baseline in Disease Activity as Measured by British Isles Lupus Assessment Group (BILAG) 2004 Score
-----------------	---

End point description:

BILAG Disease Activity Index evaluates systemic lupus erythematosus (SLE) activity in 8 organ system domains: General, mucocutaneous, neurological, musculoskeletal, cardiorespiratory, vasculitis, renal, and hematologic using a separate alphabetic score (A to E) assigned to each organ system defined as follows. BILAG A: Severe disease activity; BILAG B: moderate disease activity; BILAG C: mild disease; BILAG D: system previously affected but now inactive; BILAG E: system never involved. BILAG evaluated by scoring each of a list of signs and symptoms as: improving (1); same (2); worse (3); new (4); not present (0); not done (ND). The total BILAG score is the sum of the scores of the 8 domains where A=9, B=3, C=1, D=0, and E=0. The total score ranges from 0 to 72 with a higher score indicating greater lupus activity. mITT analysis set used. Here "n" signifies those subjects who were evaluable for this outcome measure at specified categories.

## Secondary: Change from Baseline in Disease Activity as Measured by Systemic Lupus Erythematosus Disease Activity Index-2000 (SLEDAI-2K) Score

End point title	Change from Baseline in Disease Activity as Measured by Systemic Lupus Erythematosus Disease Activity Index-2000 (SLEDAI-2K) Score
-----------------	--

End point description:

SLEDAI-2K is an activity index that measures disease activity and records feature of active lupus as present or not present. SLEDAI-2K uses a weighted checklist to assign a numerical score based on the presence or absence of 24 symptoms. Each symptom present is assigned between 1 and 8 points based on its usual clinical importance, yielding a total score that ranges from 0 points (no symptoms) to 105 points (presence of all defined symptoms). Baseline was defined as core study screening visit. mITT analysis set was defined as all enrolled subjects in the LTE study. Efficacy analyses were performed on the mITT analysis set according to randomized treatment. Here, "n" signifies those subjects who were evaluable for this outcome measure at specified categories.

## Responder Index-50 (SRI-50) Score

End point title	Change from Baseline in Disease Activity as Measured by SLEDAI-2K Responder Index-50 (SRI-50) Score
-----------------	---

### End point description:

SRI-50 index was derived from SLEDAI-2K & capture 50% or better improvement in each descriptor between any 2 visits in systemic lupus erythematosus (SLE) participants when there was incomplete resolution. New assigned scores for descriptors of SRI-50 were derived by dividing score of each SLEDAI-2K descriptor by 2. SLEDAI-2K was an activity index that measured disease activity & records feature of active lupus as present/not present. SLEDAI-2K used weighted checklist to assign numerical score based on presence/ absence of 24 symptoms. Each symptom was assigned between 1 & 8 points based on its usual clinical importance, yielding a total score that ranged from 0(no symptoms) to 105 points(presence of all defined symptoms). Data was not collected for this endpoint as results from ADDRESSII core study(NCT01972568) for SRI-50 were not significant. Therefore, data collection for SRI-50 for current study (700461-024; NCT02070978) was halted & no analysis was conducted for endpoint.

## Secondary: Change from Baseline in Disease Activity as Measured by Physician's Global Assessment (PGA) Score

End point title	Change from Baseline in Disease Activity as Measured by Physician's Global Assessment (PGA) Score
-----------------	---

### End point description:

The PGA was used to quantify disease activity and was measured using an anchored visual analog scale (VAS). The subject's current disease activity assessed by investigator in the score range of 0 to 3. Where 0=none; 1=mild; 2=moderate; 3=severe. The assessment made relative not to the subject's most severe state, but the most severe state of systemic lupus erythematosus (SLE) per the investigator's assessment. Baseline was defined as core study screening visit. mITT analysis set was defined as all enrolled subjects in the LTE study. Efficacy analyses were performed on the mITT analysis set according to randomized treatment. Here "n" signifies those subjects who were evaluable for this endpoint at specified categories.

End point type	Secondary

## Secondary: Change From Baseline in the Short-Form (SF-36) Health Survey Physical Component Score and Mental Component Score

End point title	Change From Baseline in the Short-Form (SF-36) Health Survey Physical Component Score and Mental Component Score
-----------------	--

End point description:

The 36-Item Short-Form Health Survey (SF-36) is a standardized survey evaluating 8 aspects of functional health and well being: physical and social functioning, physical and emotional role limitations, bodily pain, general health, vitality (energy and fatigue), mental health (psychological distress and well-being). These 8 aspects summarized as physical component summary (PCS) and mental component summary (MCS) scores. The score was scaled from 0 to 100, where 0 = worse health and 100 = best possible health. mITT analysis set was used. Here "n" signifies those subjects who were evaluable for this outcome measure at specified categories.

## Secondary: Change from Baseline in Lupus Quality of Life (LupusQoL) Questionnaire Score

End point title	Change from Baseline in Lupus Quality of Life (LupusQoL) Questionnaire Score
-----------------	--

End point description:

The LupusQoL was a lupus-specific health related QoL (HRQoL) questionnaire consisting of 34 items grouped in 8 domains: physical health (PH), pain, planning, intimate relationships (IR), burden to others (BtO), emotional health (EH), body image (BI), and fatigue. Subjects indicate their responses on a 5-point Likert response format, where 4 = never, 3 = occasionally, 2 = a good bit of the time, 1 = most of the time, and 0 = all of the time. Summary scores can be calculated for all 8 domains. A LupusQoL score for each domain was reported on a 0 to 100 scale, with greater values indicating better HRQoL. Baseline was defined as Day 1 of core study. mITT analysis set was defined as all enrolled subjects in the LTE study. Efficacy analyses were performed on the mITT analysis set according to randomized treatment. Here "n" signifies those subjects who were evaluable for this endpoint at specified categories.

## Statistical analyses

No statistical analyses for this end point

## Secondary: Number of Subjects With Patient Global Impression of Change (PGIC)

End point title	Number of Subjects With Patient Global Impression of Change (PGIC)
-----------------	--

End point description:

The PGIC is self-rated scale that asks the subject to describe the change in activity limitations, symptoms, emotions, and overall Quality of life (QoL) related to the subject's painful condition on the following scale: 1 (very much improved), 2 (much improved), 3 (minimally improved), 4 (no change), 5 (minimally worse), 6 (much worse) and 7 (very much worse). Number of subjects in the PGIC categories of very much improved (1) and much improved (2) are reported. mITT analysis set was defined as all enrolled subjects in the LTE study. Efficacy analyses were performed on the mITT analysis set according to randomized treatment. Here "n" signifies those subjects who were evaluable for this outcome measure at specified categories.

## Secondary: Change From Baseline in Functional Assessment of Chronic Illness Therapy (FACIT)-Fatigue Score

End point title	Change From Baseline in Functional Assessment of Chronic Illness Therapy (FACIT)-Fatigue Score
-----------------	--

End point description:

The FACIT-Fatigue score was calculated according to a 13-item questionnaire that assesses self-reported fatigue and its impact upon daily activities and function. It uses a 5-point Likert-type scale (0 = not at all; 1 = a little bit; 2 = somewhat; 3 = quite a bit; 4 = very much). The sum of all responses resulted in the FACIT-Fatigue score for a total possible score of 0 (worse possible score) to 52 (best score). A higher score reflected an improvement in the subject's health status. mITT analysis set was defined as all enrolled subjects in the LTE study. Efficacy analyses were performed on the mITT analysis set according to randomized treatment. Here "n" signifies those subjects who were evaluable for this outcome measure at specified categories.

## Statistical analyses

No statistical analyses for this end point

## Secondary: Number of Subjects With at least one Adverse Event

End point title	Number of Subjects With at least one Adverse Event
End point description:	
An Adverse event (AE) was defined as any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease associated with the use of study drug, whether or not considered related to the study drug or worsening of pre-existing medical condition, whether or not related to study drug. Treatment-Emergent adverse events (TEAEs) are defined as events with an onset date on or after the date of first dose of study treatment in the core study and ongoing at LTE study entry, or occurring during LTE study. The safety analyses set included all subjects enrolled into the LTE study and who received at least 1 dose of planned study treatment. Subjects were analyzed according to the actual treatment they received.	
End point type	Secondary
End point timeframe:	
Baseline (Day 1 of Core study) up to maximum duration of 167.7 weeks	

End point values	Placebo/Atacicept 150 mg	Atacicept 75 mg	Atacicept 150 mg	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	83	82	88

## Secondary: Number of Subjects With Columbia-Suicide Severity Rating Scale (C-SSRS) Score

End point title	Number of Subjects With Columbia-Suicide Severity Rating Scale (C-SSRS) Score
End point description:	
The C-SSRS assesses the suicidal behavior (SB) and suicidal ideation (SI) in participants. Occurrence of SB after study entry is defined as having answered "yes" to a least 1 of the 4 SB subcategories (actual attempt, interrupted attempt, aborted attempt, and preparatory acts or behavior). Occurrence of SI is defined as having answered "yes" to at least 1 of the SI sub-categories (1) wish to be dead, (2) nonspecific active suicidal thoughts, (3) active SI with any methods (no plan) without intent to act, (4) active SI with some intent to act (without specific plan), and (5) active SI with specific plan and intent). The safety analyses set included all subjects enrolled into the LTE study and who received at least 1 dose of planned study treatment. Subjects were analyzed according to the actual treatment they received.	
End point type	Secondary
End point timeframe:	
LTE Day 1, Week 24, Week 48, Week 72 and Week 98	

End point values	Placebo/Atacicept 150 mg	Atacicept 75 mg	Atacicept 150 mg	
Subject group type	Reporting group	Reporting group	Reporting group

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Baseline up to maximum duration of 167.7 weeks

Adverse event reporting additional description:

The safety analyses set included all subjects enrolled into the LTE study and who received at least 1 dose of planned study treatment. Subjects were analyzed according to the actual treatment they received.

Assessment type	Systematic

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	21.0
--------------------	------

### Reporting groups

Reporting group title	Placebo/Atacicept 150 mg
-----------------------	--------------------------

Reporting group description:

Subjects received atacicept 150 mg as once-weekly subcutaneous injection during this LTE study up to a maximum of 97.7 weeks.

Reporting group title	Atacicept 75 mg
-----------------------	-----------------

Reporting group description:

Subjects received atacicept 75 mg as once-weekly subcutaneous injection during this LTE study up to a maximum of 143.7 weeks.

Reporting group title	Atacicept 150 mg
-----------------------	------------------

Reporting group description:

Subjects received atacicept 150 mg as once-weekly subcutaneous injection during this LTE study up to a maximum of 97.9 weeks.

Nasopharyngitis subjects affected / exposed occurrences (all)	8 / 83 (9.64%) 11	8 / 82 (9.76%) 10	5 / 88 (5.68%) 9
Pharyngitis subjects affected / exposed occurrences (all)	3 / 83 (3.61%) 3	6 / 82 (7.32%) 6	6 / 88 (6.82%) 6
Upper respiratory tract infection subjects affected / exposed occurrences (all)	7 / 83 (8.43%) 13	11 / 82 (13.41%) 19	15 / 88 (17.05%) 26
Urinary tract infection subjects affected / exposed occurrences (all)	18 / 83 (21.69%) 31	14 / 82 (17.07%) 18	17 / 88 (19.32%) 24
Sinusitis subjects affected / exposed occurrences (all)	3 / 83 (3.61%) 5	7 / 82 (8.54%) 9	5 / 88 (5.68%) 5

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 September 2014	Updated the coordinating investigator, medical responsible and contact information. total duration of treatment, updated EMR700461-023 to ADDRESS II, Updated dosage information to include the 150 mg dose given as 1 or 2 injections.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study was terminated early due to shortage of drug supply and there were many fewer number of participants remaining in each dosage group after Week 72 precluding meaningful inferences.
