

Clinical trial results:

An Open-Label, Phase 2 Basket Study of Neratinib in Patients with Solid Tumors with Somatic Activating HER Mutations

Summary

EudraCT number	2013-002872-42
Trial protocol	ES IT FI GB DK BE FR IE
Global end of trial date	02 January 2023

Results information

Result version number	v2 (current)
This version publication date	27 April 2024
First version publication date	06 January 2024
Version creation reason	<ul style="list-style-type: none">• Correction of full data set The study was terminated to align with the sponsor's current development plans for neratinib. The decision was not based on any new efficacy or safety data for neratinib.

Trial information

Trial identification

Sponsor protocol code	PUMA-NER-5201
-----------------------	---------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01953926
WHO universal trial number (UTN)	-

Scientific contact	Clinical Trials Information Desk, Puma Biotechnology, Inc., 1 4242486500, clinicaltrials@pumabiotechnology.com

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 January 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	02 January 2023
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To determine the objective response rate at 8 weeks (ORR8) following treatment with neratinib in patients with solid tumors that test positive for somatic human epidermal growth factor receptor mutations in the ERBB gene family (EGFR, HER2, and/or HER3) or EGFR gene amplification.

Protection of trial subjects:

Study commencement required prior written approval of a properly constituted Institutional Review Board (IRB) or Independent Ethics Committee (IEC). Clinical trial data were monitored at regular intervals by the Sponsor or their representative throughout the study to verify compliance to study protocol, completeness, accuracy and consistency of the data and adherence to local regulations on the conduct of clinical research. Patients were discontinued from investigational product(s) (IP) prior to study closure in the following circumstances: disease progression, unacceptable toxicity, and withdrawal of consent.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 September 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 10
Country: Number of subjects enrolled	Canada: 5
Country: Number of subjects enrolled	Israel: 24
Country: Number of subjects enrolled	Korea, Republic of: 4
Country: Number of subjects enrolled	Serbia: 3
Country: Number of subjects enrolled	United States: 346
Country: Number of subjects enrolled	Spain: 113
Country: Number of subjects enrolled	United Kingdom: 4
Country: Number of subjects enrolled	Belgium: 14
Country: Number of subjects enrolled	Denmark: 15
Country: Number of subjects enrolled	France: 23
Country: Number of subjects enrolled	Ireland: 8
Country: Number of subjects enrolled	Italy: 13
Worldwide total number of subjects	582
EEA total number of subjects	186

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	359
From 65 to 84 years	216
85 years and over	7

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Patients will be assigned to cohorts based on tumors harboring somatic mutations in EGFR or HER2 identified through previously documented mutation testing performed prior to screening and by the tumor type. If a tumor harbors more than one qualifying aberration/mutation, then the patient will be assigned to the appropriate tumor-specific cohort.

Period 1

Period 1 title	Treatment (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Neratinib
------------------	-----------

Arm description:

Neratinib 240 mg PO QD

Arm type	Experimental
Investigational medicinal product name	Neratinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

240 mg PO QD

Arm title	Neratinib + Fulvestrant
------------------	-------------------------

Arm description:

Neratinib 240 mg PO QD + Fulvestrant 500 mg IM on days 1, 15, 29, then every 28 days

Arm type	Experimental
Investigational medicinal product name	Fulvestrant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

500 mg IM on Days 1, 15, 29, then once every 28 days thereafter.

Investigational medicinal product name	Neratinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

240 mg PO QD

Arm title	Neratinib + Paclitaxel
------------------	------------------------

Arm description:

Neratinib 240 mg PO QD + Paclitaxel 80 mg/m² on Days 1, 8, 15 of every 4-week cycle

Arm type	Experimental
Investigational medicinal product name	Paclitaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravascular use
Dosage and administration details:	
80 mg/m ² on Days 1, 8, 15 of every 4-week cycle	
Investigational medicinal product name	Neratinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
240 mg PO QD	
Arm title	Neratinib + Trastuzumab
Arm description:	
Neratinib 240 mg PO QD + Trastuzumab 8 mg/kg once then 6 mg/kg every 3 weeks.	
Arm type	Experimental
Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
8 mg/kg once then 6 mg/kg every 3 weeks	
Investigational medicinal product name	Neratinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
240 mg PO QD	
Arm title	Neratinib + Fulvestrant + Trastuzumab
Arm description:	
Neratinib 240 mg PO QD + Fulvestrant 500 mg IM on days 1, 15, 29, then every 28 days + Trastuzumab 8 mg/kg once then 6 mg/kg every 3 weeks	
Arm type	Experimental
Investigational medicinal product name	Neratinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
240 mg PO QD	
Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:	
8 mg/kg once then 6 mg/kg every 3 weeks	
Investigational medicinal product name	Fulvestrant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use
Dosage and administration details:	
500 mg IM on Days 1, 15, 29, then once every 28 days thereafter.	
Arm title	Fulvestrant
Arm description:	
Fulvestrant 500 mg IM on days 1, 15, 29, then every 28 days	
Arm type	Experimental
Investigational medicinal product name	Fulvestrant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use
Dosage and administration details:	
500 mg IM on Days 1, 15, 29, then once every 28 days thereafter.	
Arm title	Fulvestrant + Trastuzumab
Arm description:	
Fulvestrant 500 mg IM on days 1, 15, 29, then every 28 days + Trastuzumab 8 mg/kg once then 6 mg/kg every 3 weeks	
Arm type	Experimental
Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
8 mg/kg once then 6 mg/kg every 3 weeks	
Investigational medicinal product name	Fulvestrant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use
Dosage and administration details:	
500 mg IM on Days 1, 15, 29, then once every 28 days thereafter.	
Arm title	Not treated

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 November 2013	Amendment 1 key changes included primary and secondary objectives, including the primary objective was changed from "HER2-mutation positive solid tumors" to "solid tumors that test positive for somatic human epidermal growth factor receptor mutations in the ERBB gene family (EGFR, HER2, and/or HER3) or EGFR gene amplification", secondary objective #1 was revised from "HER2-mutation positive solid tumors" to "tumors that test positive for somatic human epidermal growth factor receptor mutations (EGFR, HER2, HER3) in the ERBB gene family (EGFR, HER2, and/or HER3) or EGFR gene amplification", secondary objective #2 changed the clinical benefit rate starting from "date of enrollment" to "C1D1". Changes were made to the exploratory objectives. In study design, the safety follow up was revised from "28 to 35 days" to "28 days (+14 days)", two new cohorts of patients with solid tumors were added, for a total of 8 cohorts of patients organized in two groups (HER2 mutation positive and HER3 mutation positive). Additional changes included inclusion and exclusion criteria, study assessments, and clarifications to the study analysis plan.
02 April 2014	Amendment 2 key changes included the addition of a HER2-mutant breast cancer cohort, for a total of nine cohorts organized in two groups (HER2 mutation and HER3 mutation). The number of patients and study centers was increased. Modified PERCIST (mPERCIST) was included with clarification of resistance mechanism to drug and exploratory objectives. The Primary Efficacy Endpoint (Objective Response Rate at 8 weeks) was defined as the proportion of patients who achieved confirmed Complete Response or Partial Response per RECIST version 1.1 or other defined response criteria. Additional changes were made to the study analysis section and known HER2 mutations.
17 March 2015	Amendment 3 key changes included increase in number of patients and study duration, and the addition of five new cohorts, for a total of 14 cohorts organized by mutations (ERBB2, EGFR, and ERBB3), clarified that mutation testing will be centrally evaluated retrospectively, clarifications to the primary and secondary endpoints, addition of new inclusion and exclusion criteria, secondary endpoints, exploratory objectives and clarifications to study analysis methods and treatment timelines. Additional changes to study design included the addition of new combination of regimens, concomitant medications and study assessments.
20 May 2016	Amendment 4 key changes included an increase in the number of centers and study duration, clarifications to the primary objective of the study, introduction of a new treatment cohort with combination treatment of neratinib with paclitaxel in bladder/urinary tract cancer. The following cohorts were closed to enrollment: bladder/urinary tract monotherapy, colorectal monotherapy, breast HR positive monotherapy, lung (NSCLC) monotherapy, primary brain monotherapy, and solid tumors (NOS) ERBB3-mutant monotherapy cohorts. Additional changes included inclusion and exclusion criteria, study assessments, study analysis, and instructions on combination treatment dosing administration and concomitant medications.

04 October 2017	Amendment 5 key changes included an increase in the number of centers, number of patients, and study duration. The primary objective of the study was clarified. A new treatment cohort was added: patients with ERBB2-mutant cervical cancer treated with neratinib monotherapy; patients with ERBB4-mutant solid tumors treated with neratinib monotherapy; patients with EGFR exon 18 mutant lung cancer treated with neratinib monotherapy; and patients with ERBB2-mutant breast, lung, or colorectal cancer treated with neratinib + trastuzumab ± fulvestrant combination therapy. The following cohorts were closed to enrollment: ERBB2-mutant bladder/urinary tract monotherapy, ERBB2-mutant HR positive breast monotherapy, ERBB2-mutant HR positive breast combination with fulvestrant, ERBB2-mutant HR negative breast monotherapy, ERBB2-mutant colorectal monotherapy, ERBB2-mutant endometrial monotherapy, ERBB2-mutant lung monotherapy, EGFR-mutant or amplified primary brain monotherapy, and ERBB3-mutant solid tumor (NOS) monotherapy cohorts. Additional changes included inclusion and exclusion criteria, study assessments, study analysis, and instructions on dose adjustment due to toxicity and combination treatment regimens.
21 January 2020	Amendment 6 key changes included an increase in the number of centers, number of patients, and study duration, and updates to primary, secondary and exploratory objectives of the study. The following cohorts were closed to enrollment: colorectal cancer combination therapy with neratinib + trastuzumab, lung cancer HER2-mutant combination therapy with neratinib + trastuzumab, esophageal cancer monotherapy, biliary cancer monotherapy, ovarian cancer monotherapy, solid tumors (not otherwise specified) HER4-mutant, and fibrolamellar carcinoma. The overall design and plan of the study was revised to accommodate changes to procedures and schedule of events specific to hormone receptor positive, HER2 negative metastatic breast cancer and metastatic cervical cancer cohort and by removal of information applicable to discontinued cohorts. Randomization procedures were added for patients in the HER2-negative, HER2-mutant, HR positive breast cancer cohort with RECIST measurable tumors who were previously treated with CDK4/6 inhibitors. Additional changes included inclusion and exclusion criteria, study assessments, study analysis, and instructions on combination treatment regimens and concomitant therapies.
03 February 2021	Amendment 7 key changes included increase in study duration and exploratory objectives. The following cohorts were closed to enrollment: solid tumors (NOS) HER2-mutant monotherapy and bladder/urinary HER2-mutant combination therapy of neratinib + paclitaxel, clarifications related to these closures were included. Additional changes included inclusion and exclusion criteria and study assessments.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
