

Clinical trial results:

A multicentre, multinational, randomised, parallel-group, placebo-controlled (double blind) and active-controlled (open) trial to compare the efficacy and safety of once-weekly dosing of NNC0195-0092 with once-weekly dosing of placebo and daily Norditropin® FlexPro® in adults with growth hormone deficiency for 35 weeks, followed by a 53-week open-label extension period

Summary

EudraCT number	2013-002892-16

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 December 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	01 May 2017
Global end of trial reached?	Yes
Global end of trial date	07 May 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the efficacy of once-weekly dosing of somapacitan (NNC0195-0092) compared to placebo after 34 weeks of treatment in AGHD patients

Protection of trial subjects:

The trial was conducted in accordance with the Declaration of Helsinki (Oct 2013) and ICH Good Clinical Practice, including archiving of essential documents (May 1996) and EN ISO 14155 Part 1 and 2 and FDA 21 CFR 312.120.

Background therapy:

Not applicable

Evidence for comparator:

Not applicable

Actual start date of recruitment	31 October 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 8
Country: Number of subjects enrolled	United Kingdom: 7
Country: Number of subjects enrolled	India: 28

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	259
From 65 to 84 years	41
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The trial was conducted at 92 sites in 16 countries namely Australia, Germany, India, Japan, Latvia, Lithuania, Malaysia, Poland, Romania, Russian federation, South Africa, Sweden, Turkey, Ukraine, United Kingdom and United States.

Pre-assignment

Screening details:

In the main phase of the study, 8 weeks of titration was followed by 26 weeks of fixed dose administration followed by a 1 week washout period. In the open-label extension phase, 8 weeks of titration was followed by 44 weeks of fixed dose administration followed by a 1-week washout period.

Period 1

Period 1 title	Main phase (Double-blind phase)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

For the main part of the trial, somapacitan PDS290 10 mg/1.5 ml and somapacitan PDS290 placebo pens were visually identical and labelled blinded, whereas Norditropin® FlexPro® was open-labelled.

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Subjects received placebo (somapacitan) for 34 weeks (8 weeks dose titration followed by 26 weeks fixed dose treatment) in the main phase of the trial.

Arm type	Placebo
Investigational medicinal product name	Somapacitan PDS290 Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects injected themselves once-weekly subcutaneously (s.c.; under the skin) in the morning (before 10 AM). On site visit days this was extended until 12:00 PM (noon). Injections were taken in the thigh and/or abdomen alternating within these body areas for every injection. Subjects were trained to use the pen injector under the supervision of site staff. Dose adjustments were allowed during the first 8 weeks titration period (at week 2, 4, 6 and 8). Dose adjustments were based on insulin like growth factor - I (IGF-I) standard deviation score (SDS). The minimum and maximum weekly dose was set to 0.1 mg and 8 mg, respectively.

Arm title	Norditropin
------------------	-------------

Arm description:

Subjects received Norditropin® FlexPro® 10 mg/1.5 mL for 34 weeks (8 weeks dose titration followed by 26 weeks fixed dose treatment) in the main phase of the trial.

Arm type	Active comparator
Investigational medicinal product name	Somatropin
Investigational medicinal product code	
Other name	Norditropin® FlexPro® 10 mg/1.5 mL
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects injected themselves daily subcutaneously (s.c.; under the skin) in the evening, which was usual practice except when administered under observation. On site visit days the product was administered in the morning (up to 12 PM) and at least 12 hours after injection, the evening before. Injections were taken in the thigh and/or abdomen alternating within these body areas for every injection. Subjects were trained to use the pen injector under the supervision of site staff. Dose adjustments were allowed during the first 8 weeks titration period (at week 2, 4, 6 and 8). Dose adjustments were based on insulin like growth factor - I (IGF-I) standard deviation score (SDS). The minimum and maximum weekly dose was set to 0.05 mg and 1.1 mg, respectively. In Japanese subjects, the maximum daily dose was set to 1.0 mg.

Arm title	Somapacitan
------------------	-------------

Arm description:

Subjects received Somapacitan PDS290 10mg/1.5mL for 34 weeks (8 weeks dose titration followed by 26 weeks fixed dose treatment) in the main phase of the trial.

Arm type	Experimental
Investigational medicinal product name	Somapacitan PDS290 10mg/1.5mL
Investigational medicinal product code	
Other name	NNC0195-0092
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects injected themselves once-weekly subcutaneously (s.c.; under the skin) in the morning (before 10 AM). On site visit days this was extended until 12:00 PM (noon). Injections were taken in the thigh and/or abdomen alternating within these body areas for every injection. Subjects were trained to use the pen injector under the supervision of site staff. Dose adjustments were allowed during the first 8 weeks titration period (at week 2, 4, 6 and 8). Dose adjustments were based on insulin like growth factor - I (IGF-I) standard deviation score (SDS). The minimum and maximum weekly dose was set to 0.1 mg and 8 mg, respectively.

Period 2

Period 2 title	Extension phase (Open-label phase)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Not applicable

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo/Somapacitan
------------------	---------------------

Arm description:

Subjects who received placebo in the main period, were switched to receive somapacitan for 52 weeks (8 weeks dose titration followed by 44 weeks fixed dose treatment) in the extension period of the trial.

Arm type	Experimental
Investigational medicinal product name	Somapacitan PDS290 10mg/1.5mL
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects were trained for use of the pen injector under the supervision of site staff. Patients receiving Somapacitan injected themselves once a week, subcutaneously, in the morning before 10 AM. On site visit days, the time window was extended to 12:00 noon.

Arm title	Somapacitan/Somapacitan
------------------	-------------------------

Arm description:

Subjects who received somapacitan in the main period, continued to receive somapacitan for 52 weeks (8 weeks dose titration followed by 44 weeks fixed dose treatment) in the extension period of the trial.

Arm type	Experimental
Investigational medicinal product name	Somapacitan PDS290 10mg/1.5mL
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects were trained for use of the pen injector under the supervision of site staff. Patients receiving Somapacitan injected themselves once a week, subcutaneously, in the morning before 10 AM. On site visit days, the time window was extended to 12:00 noon.

Arm title	Norditropin/Norditropin
------------------	-------------------------

Arm description:

Subjects who received norditropin in the main period, continued to receive norditropin for 52 weeks (8 weeks dose titration followed by 44 weeks fixed dose treatment) in the extension period of the trial.

Arm type	Active comparator
Investigational medicinal product name	Somatropin
Investigational medicinal product code	
Other name	Norditropin® FlexPro® 10 mg/1.5 mL
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects were trained for use of the pen injector under the supervision of site staff. Patients receiving Norditropin injected themselves daily, subcutaneously, in the evening, while during observed trial drug administration, they injected themselves in the morning (before 12:00 PM and at least 12 hours after the previous injection).

Arm title	Norditropin/Somapacitan
------------------	-------------------------

Arm description:

Subjects who received norditropin in the main period, were switched to receive somapacitan for 52 weeks (8 weeks dose titration followed by 44 weeks fixed dose treatment) in the extension period of the trial.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Somapacitan PDS290 10mg/1.5mL

Started	55	114	52
Completed	53	109	47
Not completed	2	5	5
Adverse event, serious fatal	1	-	1
Consent withdrawn by subject	1	4	3
Lost to follow-up	-	1	1

Number of subjects in period 2^[1]	Norditropin/Somapacitan
Started	51
Completed	48
Not completed	3
Adverse event, serious fatal	1
Consent withdrawn by subject	1
Lost to follow-up	1

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Two subjects on Norditropin, who completed the main phase didn't initiate treatment in the extension phase.

Baseline (n=60, 119 and 119)	36.90 (± 8.98)	38.10 (± 9.65)	39.11 (± 8.81)	
Change from baseline (week 34) (n=56, 111 and 116)	0.49 (± 3.31)	-2.39 (± 4.48)	-1.17 (± 2.89)	

Statistical analyses

Statistical analysis title	Treatment difference (Somapacitan - Placebo)
----------------------------	--

Statistical analysis description:

Changes in truncal fat percentage from baseline to the 34 week's measurements was analysed using an analysis of covariance model with treatment, growth hormone deficiency (GHD) onset type, sex, region, diabetes mellitus (DM) and sex by region by DM interaction as factors and baseline as a covariate. The analysis was conducted using a multiple imputation technique where trajectory after a withdrawn subjects last observation was imputed based on data from the placebo arm.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 January 2015	<p>Updates based on comments received on the protocol during End of Phase 2 meetings with US Food and drug administration (FDA) and Pharmaceuticals and Medical Devices Agency, Japan (PMDA):</p> <p>FDA: Primary analysis to be based on intention-to-treat principle; Additional antibody and PK sampling to align with the time points for immunogenicity assessments as recommended in the FDA Immunogenicity guideline of February 2013; Inclusion of subjects with diabetes.</p> <p>PMDA: Patients with diabetes mellitus will be excluded at sites in Japan. Application of Japanese guidelines for the diagnosis of adult growth hormone deficiency (AGHD) for patients included at sites in Japan. Changes to subject information-informed consent (SI-IC): specification of discontinuation of trial drug, and withdrawal and termination of the trial; Urine sample was deleted and eye examination was added. Full title was added.</p>
29 January 2015	<p>Based on feedback from Ethics Committee, clarifications and feedback from investigators: Alternative test for adrenocorticotrophic hormone (ACTH) stimulation test (limited availability in some countries). Impact on inclusion criterion regarding serum levels of free thyroxine (T4) and the patient informed consent form. Process for local tolerability assessments includes external review of photos by a dermatologist. Clarification of follow-up process after last patient last visit (LPLV) if 2 consecutive positive antibody results. Ethics Committee, Germany: 2 additional exclusion criteria added, applicable to Germany only. These criteria cover exclusion of patients committed to an institution and persons employed with the sponsor/CRO/trial centre.</p> <p>Novo Nordisk: Clarifications when and how deviation from the titration schedule should be handled; adrenal insufficient patients on stable replacement therapy for 3 months the option of re-screening.</p>
24 September 2015	<p>This amendment was implemented due to recruitment difficulties and more flexibility was needed in the inclusion/exclusion criteria, and titration visit schedule. Allowed visits 1a and 1b to be combined into one visit. Request from FDA to ensure that electrocardiograms (ECGs) were performed at time of mean C_{max}. Changes to SI-IC: Information added that replacement therapy could be initiated if low thyroid or adrenal function or testosterone levels. Text on evidence of intracranial tumour growth was rephrased ('no evidence of intracranial tumour growth since removal of the tumour').</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
