

## Clinical trial results:

**A phase 3 randomized, double-masked, controlled trial to establish the safety and efficacy of intravitreal administration of Fovista™ (anti PDGF-b pegylated aptamer) administered in combination with Lucentis® compared to Lucentis® monotherapy in subjects with subfoveal neovascular age-related macular degeneration**

### Summary

EudraCT number	2013-002997-33
Trial protocol	GB LV AT CZ EE SK BE
Global end of trial date	20 February 2017

### Results information

Result version number	v2 (current)
This version publication date	24 May 2018
First version publication date	23 March 2018
Version creation reason	<ul style="list-style-type: none"><li>• Correction of full data set</li></ul> The row for total of non-serious adverse events reported includes all subjects reporting non-serious adverse events. The row should include the total number of subjects who reported $\geq 5\%$ non-serious adverse events only.

### Trial information

#### Trial identification

Sponsor protocol code	OPH1002
-----------------------	---------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 December 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 October 2016
Global end of trial reached?	Yes
Global end of trial date	20 February 2017
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

To evaluate the safety and efficacy of intravitreal (IVT) administration of Fovista when administered in combination with IVT Lucentis compared to IVT Lucentis monotherapy, in subjects with subfoveal choroidal neovascularization (CNV) secondary to age-related macular degeneration (AMD).

Protection of trial subjects:

All subjects signed the informed consent before undergoing any study-related procedure. An independent data monitoring committee reviewed subject safety data during the course of the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 August 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 46
Country: Number of subjects enrolled	Slovakia: 9
Country: Number of subjects enrolled	United Kingdom: 27
Country: Number of subjects enrolled	Austria: 10
Country: Number of subjects enrolled	Belgium: 1
Country: Number of subjects enrolled	Czech Republic: 84
Country: Number of subjects enrolled	Estonia: 22
Country: Number of subjects enrolled	Italy: 118
Country: Number of subjects enrolled	Latvia: 46
Country: Number of subjects enrolled	Canada: 23
Country: Number of subjects enrolled	Switzerland: 7
Country: Number of subjects enrolled	United States: 211
Country: Number of subjects enrolled	Brazil: 17
Worldwide total number of subjects	621
EEA total number of subjects	363

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	47
From 65 to 84 years	477
85 years and over	97

## Subject disposition

### Recruitment

Recruitment details:

This study was conducted in 122 centers in 13 countries between 28 August 2013 and 20 February 2017. Written informed consent was obtained before any of the Screening details listed below were performed.

### Pre-assignment

Screening details:

Medical&ophthalmologic history,protocol refraction&visual acuity,ophthalmologic examination,Goldmann Applanation Tonometry,vital signs,physical examination, performance status,ECG,color fundus photographs,Fluorescein Angiograms,Optical Coherence Tomography,laboratory&pregnancy tests&concomitant medication were assessed at screening prior to Day1

### Period 1

Period 1 title	Year 1
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Blinding implementation details:

It was the responsibility of the Principal Investigator to ensure that the physician assessing adverse events (AEs), the visual acuity (VA) examiner, all masked study personnel and the subject remain masked to the subject's treatment assignment.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Sham + Lucentis

Arm description:

Subjects received the Lucentis injection first, followed by a Sham injection (pressure applied at the would-be injection site with a needle-less syringe hub).

Arm type	Experimental
Investigational medicinal product name	Sham + Lucentis
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravitreal use

Dosage and administration details:

Subjects received the Lucentis injection first (0.5 mg/eye), followed by a Sham injection (pressure applied at the would-be injection site with a needle-less syringe hub). Lucentis was administered as intravitreal injections and was administered once monthly (approximately every 28 days) in the first year of this study.

<b>Arm title</b>	Fovista + Lucentis
------------------	--------------------

Arm description:

Subjects received the Lucentis injection first, followed by Fovista injection.

Arm type	Experimental
Investigational medicinal product name	Fovista + Lucentis
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravitreal use

Dosage and administration details:

Subjects received the Lucentis injection first (0.5 mg/eye), followed by the Fovista injection (1.5 mg/eye). Both active study drugs were administered as intravitreal injections. Study drugs were

administered once monthly (approximately every 28 days) in the first year of this study.

<b>Number of subjects in period 1<sup>[1]</sup></b>	Sham + Lucentis	Fovista + Lucentis
Started	310	309
Completed	282	287
Not completed	28	22
Physician decision	2	2
Consent withdrawn by subject	17	9
Adverse event, non-fatal	5	10
Subject non-compliance	3	-
Lost to follow-up	-	1
Protocol deviation	1	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Overall, 311 subjects were randomized to the Fovista + Lucentis group. Of these 2 subjects did not receive treatment. Hence the total number of subjects in the Fovista + Lucentis group is 309.

## Period 2

Period 2 title	Year 2
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Blinding implementation details:

It was the responsibility of the Principal Investigator to ensure that the physician assessing AEs, the VA examiner, all masked study personnel and the subject remain masked to the subject's treatment assignment.

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Sham + Lucentis

Arm description:

Subjects received the Lucentis injection first, followed by a Sham injection (pressure applied at the would-be injection site with a needle-less syringe hub).

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Sham + Lucentis
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravitreal use

**Dosage and administration details:**

Subjects received the Lucentis injection first (0.5 mg/eye), followed by a Sham injection (pressure applied at the would-be injection site with a needle-less syringe hub). Lucentis was administered as intravitreal injections and was administered once monthly (approximately every 28 days) in the first year of this study. During the second year, treatment was based on the stability of visual acuity, ophthalmic examination and imaging.

<b>Arm title</b>	Fovista + Lucentis
------------------	--------------------

**Arm description:**

Subjects received the Lucentis injection first, followed by Fovista injection.

Arm type	Experimental
Investigational medicinal product name	Fovista + Lucentis
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravitreal use

**Dosage and administration details:**

Subjects received the Lucentis injection first (0.5 mg/eye), followed by the Fovista injection (1.5 mg/eye). Both active study drugs were administered as intravitreal injections. Study drugs were administered once monthly (approximately every 28 days) in the first year of this study. During the second year, treatment was based on the stability of visual acuity, ophthalmic examination and imaging.

<b>Number of subjects in period 2</b>	Sham + Lucentis	Fovista + Lucentis
Started	283	286
Completed	156	154
Not completed	127	132

## End points

### End points reporting groups

Reporting group title	Sham + Lucentis
Reporting group description: Subjects received the Lucentis injection first, followed by a Sham injection (pressure applied at the would-be injection site with a needle-less syringe hub).	
Reporting group title	Fovista + Lucentis
Reporting group description: Subjects received the Lucentis injection first, followed by Fovista injection.	
Reporting group title	Sham + Lucentis
Reporting group description: Subjects received the Lucentis injection first, followed by a Sham injection (pressure applied at the would-be injection site with a needle-less syringe hub).	
Reporting group title	Fovista + Lucentis
Reporting group description: Subjects received the Lucentis injection first, followed by Fovista injection.	

### Primary: Mean change in visual acuity (ETDRS letters) from Baseline to Month 12

End point title	Mean change in visual acuity (ETDRS letters) from Baseline to Month 12
End point description: The primary efficacy endpoint was the mean change in VA (ETDRS letters) from Baseline to Month 12. All VA assessments were performed by the study refractionist/ophthalmologist. For analyses of the primary endpoint, a Model for Repeated Measures (MRM) was used to assess the differences between the treatment groups at the Month 12 visit. VA was assessed on the ITT population which consisted of all randomized subjects who received at least one dose of study drug, irrespective of the dose actually received. Subjects were analyzed as per the dose group assigned at randomization. Subjects were included in a particular analysis, for a particular population, if relevant data were available for analysis (e.g., the primary analysis required one baseline and at least one post baseline VA measurement, to calculate a change score).	
End point type	Primary
End point timeframe: Baseline to Month 12	

End point values	Sham + Lucentis	Fovista + Lucentis		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	310	309		
Units: EDTRS letter				
least squares mean (standard error)				
MRM change from Baseline to Month 12	9.82 (± 0.86)	10.74 (± 0.86)		

## Statistical analyses

<b>Statistical analysis title</b>	Model for Repeated Measures analysis
Statistical analysis description:	
Model for Repeated Measures (MRM) adjusted for the cross-classification of baseline VA ( $\geq 47$ letters vs $< 47$ letters) and lesion subtype ( $> 50\%$ classic vs $\leq 50\%$ classic), visit, treatment by visit interaction, and the interaction of visit and the Baseline VA/lesion subtype cross-classification	
Comparison groups	Sham + Lucentis v Fovista + Lucentis
Number of subjects included in analysis	619
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.4362
Method	Model for Repeated Measures
Parameter estimate	Difference in least squares means
Point estimate	0.92
Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.4
upper limit	3.23

## Secondary: Gain of 20 or More ETDRS Letters from Baseline to Month 12

End point title	Gain of 20 or More ETDRS Letters from Baseline to Month 12
End point description:	
A secondary endpoint was to assess the proportion of subjects gaining $\geq 20$ ETDRS letters from Baseline to Month 12.	
All VA assessments were performed by the study refractionist/ophthalmologist.	
VA was assessed on the ITT population which consisted of all randomized subjects who received at least one dose of study drug, irrespective of the dose actually received. Subjects were analyzed as per the dose group assigned at randomization. Subjects were included in a particular analysis, for a particular population, if relevant data were available for analysis (e.g., the primary analysis required one baseline and at least one post baseline VA measurement, to calculate a change score).

### Statistical analyses

No statistical analyses for this end point

### Secondary: Growth of CNV Area from Baseline to Month 12 by Fluorescein Angiography

End point title	Growth of CNV Area from Baseline to Month 12 by Fluorescein Angiography
-----------------	---

End point description:

A secondary endpoint was to assess the proportion of subjects with growth of Choroidal Neovascularization (CNV) area from Baseline to Month 12 by Fluorescein Angiography (FA). All FA images were centrally read. CNV Area is defined as Classic CNV Area + Occult CNV Area + Retinal Pigment Epithelium staining. Growth of CNV area is defined as a change greater than zero in the CNV area on FA from Baseline to Month 12. Baseline is the last non-missing measurement prior to the first dose of study drug.

Subjects were analyzed as per the dose group assigned at randomization.

End point type	Secondary
----------------	-----------

### Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From Randomization at Day 1 (14 days after Screening) until end of study.

Adverse event reporting additional description:

AEs were reported on the safety population (all subjects who received at least 1dose of study drug [Fovista,Lucentis or Sham]). Subjects who have ever received an injection of Fovista were analyzed in the Fovista+Lucentis group.Causally related occurrences included both events reported as: related to injection procedure and related to study drug.

Assessment type	Non-systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 March 2014	<ol style="list-style-type: none"><li>1. Clarification of study drug retreatment algorithm.</li><li>2. Subject selection criteria were widened to include more subjects.</li><li>3. Previous or concomitant therapy was modified to clarify that therapy was prescribed at the investigator's discretion.</li><li>4. Clarification of when routine office procedures performed before informed consent may be used as screening procedures for this study.</li><li>5. Screening: clarification that Applanation Tonometry was Goldmann Applanation Tonometry.</li><li>6. Clarification that if a patient is randomized, the repeat OCT (and FA, if taken) must be submitted to the Reading Center to be used as the new study baseline.</li><li>7. A window of +/- 1 day was added to assessments.</li><li>8. Subfoveal choroidal neovascularization with some classic component (i.e., predominantly classic or minimally classic) secondary to AMD was changed to subfoveal choroidal neovascularization secondary to AMD. Subjects without evidence of a "classic" lesion on fluorescein angiogram, but with evidence of subretinal highly-reflective material on high resolution SD-OCT, were stratified into the <math>\leq 50\%</math> classic group at the time of stratification.</li><li>9. Analysis upon all Patients Completing Month 12 was amended to note that "topline" Month 12 results may need to be publically disseminated as per U.S. business law.</li><li>10. Clarification of the definition of the relationship of adverse events to study drug and injection procedure.</li></ol>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
20 February 2017	All of the subjects were terminated early from the study due to the sponsor decision, after analyses of the Year-1 data from Phase 3 studies OPH1002 and OPH1003 showed that the addition of Fovista to Lucentis did not lead to further visual improvements.	-

Notes:

### Limitations and caveats

None reported
