Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 February 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	07 February 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The objective of the study is to demonstrate the efficacy and safety, and to assess the pharmacokinetics of adalimumab administered subcutaneously in pediatric subjects with moderate-to-severe UC.

Protection of trial subjects:

The study was conducted in accordance with the protocol, International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH) guidelines, applicable regulations and guidelines governing clinical study conduct and ethical principles that have their origin in the Declaration of Helsinki.

Prior to the initiation of any screening or study-specific procedures, the investigator or his or her representative explained the nature of the study to the subject or his or her representative and answered all questions regarding this study. Pediatric subjects were included in all discussions, and their verbal or written assent was obtained. The informed consent statement was reviewed and signed and dated by the subject's parent or legal guardian, the person who administered the informed consent, and any other signatories according to local requirements. If a subject became of legal age during the study, that subject was reconsented.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 October 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 1
Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	Israel: 1
Country: Number of subjects enrolled	Japan: 8
Country: Number of subjects enrolled	Poland: 66
Country: Number of subjects enrolled	Slovakia: 6
Country: Number of subjects enrolled	Spain: 1
Country: Number of subjects enrolled	United Kingdom: 3
Country: Number of subjects enrolled	United States: 12
Worldwide total number of subjects	101
EEA total number of subjects	79

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	19
Adolescents (12-17 years)	82
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Prior to Protocol Amendment 4, subjects were randomized 3:2 at baseline to adalimumab induction high dose or adalimumab induction standard dose. At Week 8, those demonstrating a clinical response per Partial Mayo Score (PMS) were randomized 2:2:1 to adalimumab maintenance standard dose, adalimumab maintenance high dose, or maintenance placebo.

Pre-assignment

Screening details:

After Protocol Amendment 4, subjects received adalimumab induction high dose open-label. At Week 8, those demonstrating a clinical response per PMS were randomized in a 1:1 ratio to adalimumab maintenance standard dose or adalimumab maintenance high dose. "Integrated Study" data includes data from both the Main Study and the Japan Sub-Study.

Period 1

Period 1 title	Induction Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Blinding implementation details:

All AbbVie personnel with direct oversight of the conduct and management of the trial (with the exception of AbbVie Drug Supply Management Team) the Investigator, study site personnel and the subject remained blinded to each subject's treatment throughout the blinded period of the study.

Arms

Are arms mutually exclusive?	Yes
Arm title	Integrated Study: Induction Standard Dose (I-SD)

Arm description:

Subjects randomized to receive adalimumab 2.4 mg/kg (maximum dose of 160 mg) at Baseline and matching placebo at Week 1, 1.2 mg/kg (maximum dose of 80 mg) at Week 2, followed by 0.6 mg/kg (maximum dose of 40 mg) at Week 4 and Week 6.

Arm type	Experimental
Investigational medicinal product name	adalimumab
Investigational medicinal product code	
Other name	Humira
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

subcutaneous injection

Investigational medicinal product name	placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled injector
Routes of administration	Subcutaneous use

Dosage and administration details:

subcutaneous injection

Arm title	Integrated Study: Induction High Dose (I-HD)
------------------	--

Arm description:

Subjects randomized to receive adalimumab 2.4 mg/kg (maximum dose of 160 mg) at Baseline and at Week 1, 1.2 mg/kg (maximum dose of 80 mg) at Week 2, followed by 0.6 mg/kg (maximum dose of 40 mg) at Week 4 and Week 6.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	adalimumab
Investigational medicinal product code	
Other name	Humira
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use
Dosage and administration details: subcutaneous injection	
Arm title	Integrated Study: Induction High Dose Open Label (I-HD-OL)

Arm description:

(After Amendment 4) subjects assigned to open-label adalimumab 2.4 mg/kg (maximum dose of 160 mg) at Baseline and at Week 1, 1.2 mg/kg (maximum dose of 80 mg) at Week 2, followed by 0.6 mg/kg (maximum dose of 40 mg) at Week 4 and Week 6.

Arm type	Experimental
Investigational medicinal product name	adalimumab
Investigational medicinal product code	
Other name	Humira
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:
subcutaneous injection

Number of subjects in period 1	Integrated Study: Induction Standard Dose (I-SD)	Integrated Study: Induction High Dose (I-HD)	Integrated Study: Induction High Dose Open Label (I-HD- OL)
Started	32	51	18
Enrolled in Main Study	30	47	16
Enrolled in Japan Substudy	2 ^[1]	4 ^[2]	2 ^[3]
Completed	22	43	16
Not completed	10	8	2
Consent withdrawn by subject	2	1	-
Non-responder at Week 8	4	4	-
Adverse event	1	1	-

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Subjects who were enrolled in the Japan substudy.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Subjects who were enrolled in the Japan substudy.

[3] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Subjects who were enrolled in the Japan substudy.

Period 2

Period 2 title	Maintenance Period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Blinding implementation details:

All AbbVie personnel with direct oversight of the conduct and management of the trial (with the exception of AbbVie Drug Supply Management Team) the Investigator, study site personnel and the subject remained blinded to each subject's treatment throughout the blinded period of the study.

Arms

Are arms mutually exclusive?	Yes
Arm title	Integrated Study: Maintenance Placebo (M-PL)

Arm description:

(Prior to Amendment 4) subjects demonstrating a clinical response per PMS (defined as a decrease in PMS ≥ 2 points and $\geq 30\%$ from Baseline) at Week 8 randomized to maintenance placebo. Subjects were to continue their blinded treatment during the maintenance period until Week 52 unless they had ≥ 2 flares and got open label adalimumab rescue therapy after the second flare.

Arm type	Placebo

Full Mayo Score (FMS)			
The Mayo score is a tool designed to measure disease activity for ulcerative colitis. The FMS ranges from 0 (normal or inactive disease) to 12 (severe disease) and is calculated as the sum of 4 subscores (stool frequency, rectal bleeding, endoscopy, and physician's global assessment), each of which ranges from 0 (normal) to 3 (severe disease).			
Units: score on a scale			

arithmetic mean	7.8	7.7	7.7
standard deviation	± 1.22	± 1.25	± 1.09
Partial Mayo Score (PMS)			
The PMS (Mayo score without endoscopy) ranges from 0 (normal or inactive disease) to 9 (severe disease) and is calculated as the sum of 3 subscores (stool frequency, rectal bleeding and physician's global assessment), each of which ranges from 0 (normal) to 3 (severe disease).			
Units: score on a scale			
arithmetic mean	5.7	5.5	5.5
standard deviation	± 1.14	± 1.24	± 1.06

Combined M-SD + M-HD arms (see above).

Modified intent-to-treat (mITT): all Week 8 PMS responders who were re-randomized at Week 8 and received at least 1 dose of study drug during the Maintenance period; analyzed as randomized/enrolled at the beginning of the Maintenance phase.

Primary: Co-Primary Endpoint 1: Percentage of Subjects Who Achieved Clinical Remission as Measured by Partial Mayo Score (PMS) at Week 8 - Induction Period

End point title	Co-Primary Endpoint 1: Percentage of Subjects Who Achieved Clinical Remission as Measured by Partial Mayo Score (PMS) at Week 8 - Induction Period ^[1]
-----------------	---

End point description:

The Mayo score is a tool designed to measure disease activity for ulcerative colitis. The PMS (Mayo score without endoscopy) ranges from 0 (normal or inactive disease) to 9 (severe disease) and is calculated as the sum of 3 subscores (stool frequency, rectal bleeding and physician's global assessment), each of which ranges from 0 (normal) to 3 (severe disease). A negative change in PMS indicates improvement. Clinical remission was defined as a PMS ≤ 2 and no individual subscore > 1 .

Non-responder imputation: missing data imputed as not having met the endpoint.

Reporting groups

Reporting group title	Integrated Study (Main + Japan Sub- Study): I-SD
-----------------------	--

Reporting group description:

Subjects randomized to receive adalimumab 2.4 mg/kg (maximum dose of 160 mg) at Baseline and matching placebo at Week 1, 1.2 mg/kg (maximum dose of 80 mg) at Week 2, followed by 0.6 mg/kg (maximum dose of 40 mg) at Week 4 and Week 6.

TEAEs during induction period: events with an onset date on or after first dose date of study drug in induction period and up to 70 days after last dose date of the study drug in induction period and prior to first dose date of study drug in maintenance period. Mean duration of treatment was 52.8 days.

Reporting group title	Integrated Study (Main + Japan Sub- Study): I-HD
-----------------------	--

Reporting group description:

Subjects randomized to receive adalimumab 2.4 mg/kg (maximum dose of 160 mg) at Baseline and at Week 1, 1.2 mg/kg (maximum dose of 80 mg) at Week 2, followed by 0.6 mg/kg (maximum dose of 40 mg) at Week 4 and Week 6.

TEAEs during induction period: events with an onset date on or after first dose date of study drug in induction period and up to 70 days after last dose date of the study drug in induction period and prior to first dose date of study drug in maintenance period. Mean duration of treatment was 55.4 days.

Reporting group title	Integrated Study (Main + Japan Sub- Study): I-HD-OL
-----------------------	---

Reporting group description:

(After Amendment 4) subjects assigned to open-label adalimumab 2.4 mg/kg (maximum dose of 160 mg) at Baseline and at Week 1, 1.2 mg/kg (maximum dose of 80 mg) at Week 2, followed by 0.6 mg/kg (maximum dose of 40 mg) at Week 4 and Week 6.

TEAEs during induction period: events with an onset date on or after first dose date of study drug in induction period and up to 70 days after last dose date of the study drug in induction period and prior to first dose date of study drug in maintenance period. Mean duration of treatment was 53.8 days.

Reporting group title	Integrated Study (Main + Japan Sub- Study): M-SD
-----------------------	--

Reporting group description:

Subjects demonstrating a clinical response per PMS (defined as a decrease in PMS ≥ 2 points and $\geq 30\%$ from Baseline) at Week 8 randomized to adalimumab maintenance standard dose (0.6 mg/kg [maximum dose of 40 mg] eow). Subjects were to continue their blinded treatment during the maintenance period until Week 52 unless they had ≥ 2 flares and got open label adalimumab rescue therapy after the second flare.

TEAEs during maintenance period: events with an onset date on or after first dose date of study drug in maintenance period and prior to re-randomization due to first disease flare if applicable and up to 70 days after the last dose date of the study drug in maintenance period. Events with an onset date on or after the first dose date in long-term follow-up study M10-870 (NCT02632175) are excluded. Mean duration of treatment was 226.8 days.

Reporting group title	Integrated Study (Main + Japan Sub- Study): M-HD
-----------------------	--

Reporting group description:

Subjects demonstrating a clinical response per PMS (defined as a decrease in PMS ≥ 2 points and $\geq 30\%$ from Baseline) at Week 8 randomized to adalimumab maintenance high dose (0.6 mg/kg [maximum dose of 40 mg] ew). Subjects were to continue their blinded treatment during the maintenance period until Week 52 unless they had ≥ 2 flares and got open label adalimumab rescue therapy after the second flare.

TEAEs during maintenance period: events with an onset date on or after first dose date of study drug in maintenance period and prior to re-randomization due to first disease flare if applicable and up to 70 days after the last dose date of the study drug in maintenance period. Events with an onset date on or after the first dose date in long-term follow-up study M10-870 (NCT02632175) are excluded. Mean duration of treatment was 241.0 days.

Reporting group title	Integrated Study (Main + Japan Sub- Study): M-PL
-----------------------	--

Reporting group description:

(Prior to Amendment 4) subjects demonstrating a clinical response per PMS (defined as a decrease in PMS ≥ 2 points and $\geq 30\%$ from Baseline) at Week 8 randomized to maintenance placebo. Subjects were to continue their blinded treatment during the maintenance period until Week 52 unless they had ≥ 2 flares and got open label adalimumab rescue therapy after the second flare.

TEAEs during maintenance period: events with an onset date on or after first dose date of study drug in maintenance period and prior to re-randomization due to first disease flare if applicable and up to 70 days after the last dose date of the study drug in maintenance period. Events with an onset date on or after the first dose date in long-term follow-up study M10-870 (NCT02632175) are excluded. Mean duration of treatment was 184.2 days.

Reporting group title	Integrated Study (Main + Japan Sub- Study): Any Adalimumab
-----------------------	--

Reporting group description:

Subjects receiving any adalimumab during Induction or Maintenance Phase.

Any Adalimumab TEAEs: events with an onset date on or after first dose date of adalimumab and up to 70 days after the last dose date of adalimumab and prior to the first dose date in M10-870 if applicable, whichever comes first. For subjects who received placebo during the maintenance period, TEAE collection period ends 70 days after last induction dose of adalimumab and re-starts with their next adalimumab dose, if applicable. Mean duration of treatment was 256.3 days.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 September 2013	Major changes included: revised the time points of blood sampling measurements for adalimumab concentrations and anti-adalimumab antibodies; revised exclusion criteria and prohibited therapy to clarify that rectal medication for bowel preparation prior to endoscopy was permitted; revised exclusion criteria and concomitant therapy in terms of the number of days that subjects needed to be on stable dose of oral aminosalicylates prior to Baseline; revised study procedures to clarify the process of adjudication to evaluate subject's eligibility for the study and to clarify that subjects who prematurely discontinue from the study before or at Week 26 do not have to undergo an endoscopy at the Premature Discontinuation Visit; ePRO and data collection process details were added.
02 April 2014	Major changes included: added information about a Japan Substudy with inclusion of approximately 20 subjects; revised steroid tapering requirements; replaced inadequate response criteria with disease flare criteria; clarified Inclusion Criterion 2 regarding the diagnosis of ulcerative colitis confirmed by endoscopy; revised Inclusion Criterion 3 regarding methotrexate dosing requirement; added information of antibiotics use in prior therapy and concomitant therapy.
28 August 2015	Major changes included: revised steroid tapering requirements to allow tapering schedule based on investigator's discretion; revised time point to allow increasing dose of corticosteroid after corticosteroid taper was initiated; revised time point allowing initiation of treatment with corticosteroids, immunosuppressants or aminosalicylates; revised disease flare criteria and time point that rescue therapy based on disease flare could be initiated; updated Inclusion Criterion 2 to clarify the requirement for endoscopy during the Screening period; revised Inclusion Criterion 3 to add guidance on use of 6-Thioguanine nucleotide levels and revised the required timeline for previous treatment with corticosteroids or immunosuppressants; clarified Exclusion Criterion 24 regarding Hepatitis B; added fecal transplantation within 30 days prior to the Baseline visit to Exclusion Criterion 26; added vedolizumab to the list of prohibited medications; removed stool sample collection for fecal calprotectin and microbiota; removed the collection of serum bone markers; added information about the use of NRI.
02 November 2017	Major changes included: ceased randomization to double-blind induction treatment and enrollment into the standard induction dose group (all subsequent subjects who enter the study were to receive open-label high induction dose); ceased randomization to the internal placebo arm from the maintenance period and modified study endpoints and statistical analyses to reflect said change; reduced the number of planned subjects from approximately 225 (and approximately 20 subjects in the Japan Substudy) to approximately 85 subjects (and up to approximately 20 subjects in the Japan Substudy).
20 November 2018	Major changes included: modified statistical analyses and ranking of study endpoints; reflected final sample size of 93 subjects (and up to approximately 9 subjects in the Japan Substudy).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
