

Clinical trial results:

A re-treatment safety study of radium-223 dichloride in subjects with castration-resistant prostate cancer with bone metastases who received an initial course of six doses of radium-223 dichloride 50 kBq/kg every four weeks

Summary

EudraCT number	2013-003046-17

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 April 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	12 April 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the safety of re-treatment with up to 6 doses of radium-223 dichloride 50 kBq/kg given every 4 weeks in subjects with castration-resistant prostate cancer (CRPC) with bone metastases who received an initial course of 6 doses of radium-223 dichloride 50 kBq/kg.

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization guideline E6: Good Clinical Practice. Only after the subject voluntarily signed the informed consent form was he/she able to enter the study. If the subject was not capable of providing a signature, an oral statement of consent could have been given in the presence of a witness. Each subject was assured of the right to withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 December 2013
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	7 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Norway: 4
Country: Number of subjects enrolled	Spain: 5
Country: Number of subjects enrolled	Sweden: 3
Country: Number of subjects enrolled	Finland: 1
Country: Number of subjects enrolled	Italy: 3
Country: Number of subjects enrolled	Israel: 7
Country: Number of subjects enrolled	United States: 21
Worldwide total number of subjects	44
EEA total number of subjects	16

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	13
From 65 to 84 years	26
85 years and over	5

Subject disposition

Recruitment

Recruitment details:

Overall, 59 subjects were enrolled into the study centers in 7 countries worldwide, from 22-Dec-2013 (first patient first visit) to 12-Apr-2017 (last patient last visit).

Pre-assignment

Screening details:

The study was conducted at 16 study centers that screened 59 subjects. Of them, 14 were screening failures and the remaining 45 subjects were assigned to treatment.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Radium-223 dichloride (Xofigo, BAY88-8223)
-----------	--

Arm description:

Subjects received intravenous (IV) injection of radium-223 dichloride 50 kBq/kg body weight every 4 weeks up to 6 injections.

Arm type	Experimental
Investigational medicinal product name	Radium-223 dichloride
Investigational medicinal product code	BAY88-8223
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received intravenous (IV) injection of radium-223 dichloride 50 kBq/kg body weight every 4 weeks up to 6 injections.

Number of subjects in period 1	Radium-223 dichloride (Xofigo, BAY88-8223)
Started	44
Entered active Follow up	34
Entered long term Follow up	12 ^[1]
Completed	29
Not completed	15
Clinical progression	6
Consent withdrawn by subject	2
Radiological progression	4
Adverse event, non-fatal	3

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Due to database constraint, number of subjects entering each study phase was reported as milestones.

Baseline characteristics

Reporting groups

Reporting group title	Radium-223 dichloride (Xofigo, BAY88-8223)

Statistical analyses

No statistical analyses for this end point

Other pre-specified: Time to pain progression

End point title	Time to pain progression
-----------------	--------------------------

End point description:

Pain progression was defined in subjects evaluable for pain progression at baseline, i.e., subjects with a WPS of ≤ 7 at the baseline assessment. Pain assessment occurred daily for 1 week, beginning 1 week prior to each visit and including the day of the visit. An evaluable pain assessment interval required completion of a minimum of 4 out of 7 daily questions. Pain progression was defined as the occurrence of either a pain increase or an increase in pain management with respect to baseline, whichever occurred first. An entry of '99999' indicates that the value could not be estimated due to censored values.

Other pre-specified: Time to first symptomatic skeletal event (SSE)

End point title	Time to first symptomatic skeletal event (SSE)
-----------------	--

End point description:

Time to first symptomatic skeletal event (SSE) is the time (days) from the treatment start date to the first SSE on or following the start date. Subjects not experiencing an SSE at the database cutoff date for primary completion, whether or not surviving, were censored at the last assessment for SSEs. An entry of '99999' indicates that the value could not be estimated due to censored values.

End point type	Other pre-specified

Reporting groups

Reporting group title	Radium-223 dichloride (Xofigo, BAY88-8223)
-----------------------	--

Reporting group description:

Subjects received intravenous (IV) injection of radium-223 dichloride 50 kBq/kg body weight every 4 weeks up to 6 injections

Serious adverse events	Radium-223 dichloride (Xofigo, BAY88-8223)		
Total subjects affected by serious adverse events			
subjects affected / exposed	13 / 44 (29.55%)		
number of deaths (all causes)	28		
number of deaths resulting from adverse events	1		
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Basal cell carcinoma			
subjects affected / exposed	1 / 44 (2.27%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Injury, poisoning and procedural complications			
Stomatitis radiation			
subjects affected / exposed	1 / 44 (2.27%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Vascular disorders			
Peripheral ischaemia			
subjects affected / exposed	1 / 44 (2.27%)		
occurrences causally related to treatment / all	0 / 2		
deaths causally related to treatment / all	0 / 0		
Cardiac disorders			

Acute myocardial infarction			
subjects affected / exposed	1 / 44 (2.27%)		
occurrences causally related to treatment / all	0 / 1

Metabolism and nutrition disorders			
Decreased appetite			
subjects affected / exposed	8 / 44 (18.18%)		
occurrences (all)	9		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 November 2013	<p>The following changes were made:</p> <ul style="list-style-type: none">- Terminology changes, including the following which impacted endpoints: the pain endpoint was changed from pain response to pain improvement; skeletal-related event was changed to SSE.- Clarification of selection criteria of subjects for whom re-treatment was indicated, including baseline rising PSA level and substantial worsening of pain.- Specified that a separate, extended safety follow-up study protocol is being implemented and will capture the long-term follow-up of subjects on this study.- The definition of bone progression was revised based on the adapted PCWG2 criteria for consistency across the radium-223 dichloride program.- Assessment schedules for multiple variables were clarified or updated based on current regulatory requirements and recommendations.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
