Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 May 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	31 October 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine the objective response rate (ORR) for each cohort treated with talazoparib as a single agent. The ORR would be based on confirmed responses as defined by Response Evaluation Criteria in Solid Tumors (RECIST).

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trials subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 December 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 15
Country: Number of subjects enrolled	Germany: 18
Country: Number of subjects enrolled	Spain: 11
Country: Number of subjects enrolled	United Kingdom: 15
Country: Number of subjects enrolled	United States: 25
Worldwide total number of subjects	84
EEA total number of subjects	59

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	70
From 65 to 84 years	14
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

In this study, enrollment of subjects was to be done in 2 stages for each of the 2 cohorts. Sufficient responses in each cohort were observed such that enrollment could proceed to Stage 2 for both cohorts. However, due to Sponsor decision, enrollment in the overall trial was terminated early.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1: Talazoparib 1 mg

Arm description:

Subjects who responded to a prior platinum-containing treatment for metastatic breast cancer, received talazoparib 1.0 milligram (mg) orally, once daily for 21 days in repeated 21-day cycles until disease progression, occurrence of unacceptable toxicity or permanent treatment discontinuation. Subjects were followed-up for survival and new anticancer treatment at every 60 days after the last dose of study drug for the first year, every 90 days thereafter.

Arm type	Experimental
Investigational medicinal product name	Talazoparib
Investigational medicinal product code	
Other name	BMN 673, MDV3800
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Talazoparib 1 mg was administered orally, once daily.

Arm title	Cohort 2: Talazoparib 1 mg
------------------	----------------------------

Arm description:

Subjects with more than 2 prior non-platinum chemotherapy treatment for metastatic breast cancer, received talazoparib 1.0 mg orally, once daily for 21 days in repeated 21-day cycles until disease progression, occurrence of unacceptable toxicity or permanent treatment discontinuation. Prior adjuvant or neo-adjuvant therapy with a platinum was allowed if first disease recurrence was for more than 6 months since last dose of adjuvant/neo-adjuvant platinum treatment. Subjects were followed-up for survival and new anticancer treatment at every 60 days after the last dose of study drug for the first year, every 90 days thereafter.

Arm type	Experimental
Investigational medicinal product name	Talazoparib
Investigational medicinal product code	
Other name	BMN 673, MDV3800
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Talazoparib 1 mg was administered orally, once daily.

Number of subjects in period 1	Cohort 1: Talazoparib 1 mg	Cohort 2: Talazoparib 1 mg
Started	49	35
Treated	48	35
Completed	0	0
Not completed	49	35
Consent withdrawn by subject	2	1
Death	39	28
Study terminated by sponsor	4	5
Lost to follow-up	4	1

Subjects were followed-up for survival and new anticancer treatment at every 60 days after the last dose of study drug for the first year, every 90 days thereafter.

Reporting group title	Cohort 2: Talazoparib 1 mg
-----------------------	----------------------------

Reporting group description:

Subjects with more than 2 prior non-platinum chemotherapy treatment for metastatic breast cancer, received talazoparib 1.0 mg orally, once daily for 21 days in repeated 21-day cycles until disease progression, occurrence of unacceptable toxicity or permanent treatment discontinuation. Prior adjuvant or neo-adjuvant therapy with a platinum was allowed if first disease recurrence was for more than 6 months since last dose of adjuvant/neo-adjuvant platinum treatment. Subjects were followed-up for survival and new anticancer treatment at every 60 days after the last dose of study drug for the first year, every 90 days thereafter.

Subject analysis set title	All Subjects: Talazoparib 1 mg
----------------------------	--------------------------------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

Subjects, who either responded to a prior platinum-containing treatment for metastatic breast cancer or had more than 2 prior non-platinum chemotherapy treatment for metastatic breast cancer, received talazoparib 1.0 mg orally, once daily for 21 days in repeated 21-day cycles until disease progression, occurrence of unacceptable toxicity or permanent treatment discontinuation. For the subjects with non-platinum chemotherapy, prior adjuvant or neo-adjuvant therapy with a platinum was allowed if first disease recurrence was for more than 6 months since last dose of adjuvant/neo-adjuvant platinum treatment. Subjects were followed-up for survival and new anticancer treatment at every 60 days after the last dose of study drug for the first year, every 90 days thereafter.

Primary: Objective Response Rate (ORR)

End point title	Objective Response Rate (ORR) ^[1]
-----------------	--

End point description:

ORR: Percentage of subjects with a confirmed best overall complete response (CR) or partial response (PR) according to response evaluation criteria in solid tumors version 1.1 (RECIST 1.1), evaluated by an independent radiology facility (IRF). CR: Disappearance of all non-nodal target and non-target lesions, including target and non-target lymph nodes reduction to less than 10 millimeter (mm) in short axis. PR: Greater than or equal to (\geq) 30 percent (%) decrease in sum of diameters of target lesions, compared to the sum at baseline. Tumor-evaluable population (TEP) included all treated subjects who had a baseline and at least 1 post-baseline tumor assessment or who discontinued the study before first scheduled post-baseline tumor scan plus (+) 1 week window.

End point type	Primary
----------------	---------

End point timeframe:

From randomization until data cutoff date (01 Sep 2016)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis was performed for this endpoint

End point values	Cohort 1: Talazoparib 1 mg	Cohort 2: Talazoparib 1 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	48	35		
Units: percentage of subjects				
number (confidence interval 95%)	20.8 (10.47 to 34.99)	37.1 (21.47 to 55.08)		

Statistical analyses

No statistical analyses for this end point

Secondary: Clinical Benefit Rate-24 (CBR-24)

End point title	Clinical Benefit Rate-24 (CBR-24)
-----------------	-----------------------------------

End point description:

CBR24: Percentage of subjects with a best overall response of confirmed CR, confirmed PR or stable disease (SD) sustained for at least 24 weeks, as assessed by IRF using RECIST 1.1. CR: Disappearance of all non-nodal target and non-target lesions, including target and non-target lymph nodes reduction to less than 10 mm in short axis. PR: $\geq 30\%$ decrease in sum of diameters of target lesions, compared to the sum at baseline. SD: Neither PR nor progression of disease (PD) criteria met. SD follow PR only when sum increases by less than 20% from the nadir, but previously seen 30% decrease from baseline no longer hold. PD: $\geq 20\%$ increase (≥ 5 mm absolute increase) in the sum of target lesion measurements, compared to the smallest sum on study (including baseline), or unequivocal progression of non-target lesions, evaluated as a whole, such that it is clear that treatment has failed and disease is progressing, regardless of the status of the target lesions. Analysis was done on TEP.

End point type	Secondary
----------------	-----------

End point timeframe:

From randomization until data cutoff date (01 Sep 2016)

End point values	Cohort 1: Talazoparib 1 mg	Cohort 2: Talazoparib 1 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	48	35		
Units: percentage of subjects				
number (confidence interval 95%)	27.1 (15.28 to 41.85)	45.7 (28.83 to 63.35)		

Statistical analyses

No statistical analyses for this end point

Secondary: Duration of Response (DOR)

End point title	Duration of Response (DOR)
-----------------	----------------------------

End point description:

DOR: Time from first documentation of CR or PR, to PD by IRF using RECIST 1.1, or to death (any cause), whichever occurred first. CR: Disappearance of all non-nodal target, non-target lesions (lymph nodes reduction to less than ($<$) 10 mm in short axis). PR: $\geq 30\%$ decrease in sum of diameters of target lesions, compared baseline sum. PD: $\geq 20\%$ increase (≥ 5 mm absolute increase) in sum of target lesion, compared to smallest sum, or unequivocal progression of non-target lesions, regardless target lesions. Subjects with no PD or death were censored at last tumor assessment prior to on or before of new anticancer therapy or before data cutoff. Analysis was done on TEP. Here 'Number of subjects analyzed' signifies subjects evaluable for this endpoint and '99999' signifies data not available

as upper limit of 95% confidence interval (CI) was not reached due to very less number of subjects and insufficient events at data cutoff.

End point type	Secondary
End point timeframe:	
From first documentation of CR or PR until PD, last tumor assessment without PD before new anticancer treatment initiation or death due to any cause, whichever occurred first (up to the data cutoff date [01 Sep 2016])	

End point values	Cohort 1: Talazoparib 1 mg	Cohort 2: Talazoparib 1 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	10	13		
Units: months				
median (confidence interval 95%)	5.8 (2.8 to 99999)	3.8 (2.8 to 10.1)		

Statistical analyses

No statistical analyses for this end point

Secondary: Progression Free Survival (PFS)

End point title	Progression Free Survival (PFS)
End point description:	
PFS: Time, in months, from the first dose of study drug to the first documentation of PD by investigator assessment using RECIST 1.1 or death due to any cause on or before the data cutoff date, whichever occurred first. PD: $\geq 20\%$ increase (≥ 5 mm absolute increase) in the sum of target lesion measurements, compared to the smallest sum on study (including baseline), or unequivocal progression of non-target lesions, evaluated as a whole, such that it is clear that treatment has failed and disease is progressing, regardless of the status of the target lesions. Subjects with no PFS event at the analysis were censored at last tumor assessment date prior to data cutoff or date of new anticancer treatment initiation, whichever occurred first. ITT population involved all enrolled subjects including subjects who were not treated.	
End point type	Secondary
End point timeframe:	
From first dose of study drug until PD, last tumor assessment without PD before new anticancer treatment initiation or death due to any cause, whichever occurred first (up to the data cutoff date [01 Sep 2016])	

End point values	Cohort 1: Talazoparib 1 mg	Cohort 2: Talazoparib 1 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	49	35		
Units: months				
median (confidence interval 95%)	4.0 (2.8 to 5.4)	5.6 (5.5 to 7.8)		

Statistical analyses

No statistical analyses for this end point

Secondary: Overall Survival (OS)

End point title	Overall Survival (OS)
-----------------	-----------------------

End point description:

OS was defined as the time from first dose of study drug to death due to any cause. For subjects without a death date at the time of data cutoff or permanently lost to follow-up, OS was right-censored at the date the subject was last known to be alive on or before the data cutoff date. ITT population. Here '99999' signifies data not available due to insufficient number of events at data cutoff.

End point type	Secondary
----------------	-----------

End point timeframe:

From first dose of study drug until death due to any cause (up to the data cutoff date [01 Sep 2016])

End point values	Cohort 1: Talazoparib 1 mg	Cohort 2: Talazoparib 1 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	49	35		
Units: months				
median (confidence interval 95%)	11.8 (8.8 to 15.0)	16.5 (10.1 to 99999)		

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Subjects With Treatment-Emergent Adverse Events (AEs) and Serious Adverse Events (SAEs)

End point title	Number of Subjects With Treatment-Emergent Adverse Events (AEs) and Serious Adverse Events (SAEs)
-----------------	---

End point description:

An AE was any untoward medical occurrence in a subject who received study drug without regard to possibility of causal relationship. SAE was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly; an important medical event or reaction, including events requiring medical intervention to prevent worsening to any of the previously noted seriousness criteria. A treatment emergent AE was defined as an event that emerged during the treatment period that was absent before treatment, or worsened during the treatment period relative to the pretreatment state. AEs included both serious and non-serious AEs. Safety population included all subjects who received at least 1 dose of talazoparib.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline up to end of study (up to a maximum duration of 42.8 months): based on data cutoff date (31 Oct 2018)

End point values	Cohort 1: Talazoparib 1 mg	Cohort 2: Talazoparib 1 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	48	35		
Units: subjects				
AEs	47	34		
SAEs	16	7		

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Subjects With Treatment-Related Adverse Events (AEs) and Serious Adverse Events (SAEs)

End point title	Number of Subjects With Treatment-Related Adverse Events (AEs) and Serious Adverse Events (SAEs)
-----------------	--

End point description:

A treatment-related AE was any untoward medical occurrence attributed to study drug in a subject who received study drug. A treatment-related SAE was a treatment-related AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly; an important medical event or reaction, including events requiring medical intervention to prevent worsening to any of the previously noted seriousness criteria. Safety population included all subjects who received at least 1 dose of talazoparib. Related TEAEs are TEAEs that were judged by the investigators as possibly, probably, or definitely related to study drug. AEs included both SAEs and non SAEs.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline up to end of study (up to a maximum duration of 42.8 months): based on data cutoff date (31 Oct 2018)

Secondary: Trough Concentration Versus Time Summary of Talazoparib

End point title	Trough Concentration Versus Time Summary of Talazoparib
-----------------	---

End point description:

Concentrations below the limit of quantitation values less than or equal to (\leq) 25 picogram per milliliter (pg/mL) were set as zero. Pharmacokinetic (PK) analysis was not done separately for each reporting arm and cohorts were combined for PK analysis. PK population included all subjects who received at least 1 dose of talazoparib and had evaluable PK assessments. Here 'n' signifies subjects evaluable for each specified categories.

Other pre-specified: Time to Deterioration in Global Health Status/Quality of Life (QOL) and Functional Status as Assessed by European Organization for the Research and Treatment of Cancer Quality of Life Questionnaire Core 30 (EORTC-QLQ-C30)

End point title	Time to Deterioration in Global Health Status/Quality of Life (QOL) and Functional Status as Assessed by European Organization for the Research and Treatment of Cancer Quality of Life Questionnaire Core 30 (EORTC-QLQ-C30)
-----------------	---

End point description:

Time to deterioration was defined as the time from baseline to day to death, first occurrence of progression, or a ≥ 10 point change from baseline in any of the functional status score and global health status/QOL score based on the EORTC-QLQ-C30, whichever occurred first. EORTC-QLQ-C30 questionnaire is a standardized instrument developed to assess the quality of life of people with cancer. EORTC-QLQ-C30 functional subscale includes 5 items: physical, role, emotional, cognitive, and social functioning. All of the single items of functional status subscale measures and global health status/QOL subscale range from 0 to 100, where higher scores represent a better level of functioning/quality of life. ITT population involved all enrolled subjects including subjects who were not treated.

End point type	Other pre-specified
----------------	---------------------

End point timeframe:

Baseline up to death, disease progression or end of treatment (30 days after last dose of study drug or before initiation of a new anticancer therapy, whichever occurred first [up to data cutoff date: 01 Sep 2016])

End point values	Cohort 1: Talazoparib 1 mg	Cohort 2: Talazoparib 1 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	49	35		
Units: months				
median (confidence interval 95%)				
Global Health Status/QOL	2.8 (2.1 to 3.0)	5.5 (4.2 to 5.7)		
Physical Functioning	3.1 (2.1 to 4.6)	5.6 (5.3 to 7.7)		
Role Functioning	2.1 (1.4 to 2.8)	4.2 (2.1 to 5.5)		
Emotional Functioning	2.7 (2.0 to 2.8)	5.5 (4.3 to 5.6)		
Cognitive Functioning	2.7 (1.6 to 3.2)	4.2 (2.8 to 5.5)

Other pre-specified: Time to Deterioration in Disease Specific Symptoms as Assessed by the European Organization for the Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module (EORTC-QLQ-BR23)

End point title	Time to Deterioration in Disease Specific Symptoms as Assessed by the European Organization for the Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module (EORTC-QLQ-BR23)
-----------------	--

End point description:

Time to deterioration was defined as the time from baseline to day to death, first occurrence of progression, or a ≥ 10 point change from baseline in any of the symptom score based on the EORTC-QLQ-BR23, whichever occurred first. EORTC-QLQ-BR23 is a disease-specific module for breast cancer developed as a supplement for the EORTC-QLQ-C30 to assess the quality of life of subjects with breast cancer. EORTC-QLQ-BR23 symptoms subscale includes 4 items: systemic therapy side effects, breast symptoms, arm symptoms, upset by hair loss. Each item is rated by choosing 1 of 4 possible responses that record the level of intensity (1= not at all, 2= a little, 3= quite a bit, and 4= very much) within each scale. ITT population involved all enrolled subjects including subjects who were not treated.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline up to end of study (up to maximum duration of 42.8 months)

Adverse event reporting additional description:

Same event may appear as both an AE and a SAE. However, what is presented are distinct events. An event may be categorized as serious in one subject and as non-serious in another subject, or one subject may have experienced both a serious and non-serious event during the study. AEs and SAEs were collected for safety population.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Cohort 1: Talazoparib 1 mg
-----------------------	----------------------------

Reporting group description:

Subjects who responded to a prior platinum-containing treatment for metastatic breast cancer, received talazoparib 1.0 mg orally, once daily for 21 days in repeated 21-day cycles until disease progression, occurrence of unacceptable toxicity or permanent treatment discontinuation. Subjects were followed-up for survival and new anticancer treatment at every 60 days after the last dose of study drug for the first year, every 90 days thereafter.

Reporting group title	Cohort 2: Talazoparib 1 mg
-----------------------	----------------------------

Reporting group description:

Subjects with more than 2 prior non-platinum chemotherapy treatment for metastatic breast cancer, received talazoparib 1.0 mg orally, once daily for 21 days in repeated 21-day cycles until disease progression, occurrence of unacceptable toxicity or permanent treatment discontinuation. Prior adjuvant or neo-adjuvant therapy with a platinum was allowed if first disease recurrence was for more than 6 months since last dose of adjuvant/neo-adjuvant platinum treatment. Subjects were followed-up for survival and new anticancer treatment at every 60 days after the last dose of study drug for the first year, every 90 days thereafter.
