

## Clinical trial results:

### Open, Observer-blind, two Parallel Group, Randomized, Multicentric Clinical Phase III Trial on the Comparison of Efficacy and Tolerability of a New Preservative-free Formulation of Brimonidine 2 mg/ml Eye Drops vs. Alphagan™ Eye Drops in Patients with Open Angle Glaucoma or Ocular Hypertension

#### Summary

EudraCT number	2013-003083-31
Trial protocol	GR
Global end of trial date	12 December 2014

#### Results information

Result version number	v1 (current)
This version publication date	29 December 2021
First version publication date	29 December 2021

#### Trial information

##### Trial identification

Sponsor protocol code	Becro/OV/Brimo
-----------------------	----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	OmniVision
Sponsor organisation address	Lindberghstraße 9, Puchheim, Germany, 82178
Public contact	CLINICAL TRIAL INFORMATION, BECRO, +30 2106729037, trials@becro.gr
Scientific contact	CLINICAL TRIAL INFORMATION, BECRO, +30 2106729037, trials@becro.gr

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 December 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	12 December 2014
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The objective of the clinical trial to confirm the clinical non-inferiority of the preservative-free Brimonidine containing eye drops compared with the marketed preservative-containing Alphagan™ eye drops by the average decrease of diurnal IOP measured between the first and last visit.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 September 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Greece: 170
Worldwide total number of subjects	170
EEA total number of subjects	170

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	64
From 65 to 84 years	103
85 years and over	3

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 170 patients who met the inclusion and exclusion criteria signed the ICF and were selected for participation. All patients switched to monotherapy with Alphagan for four weeks (screening period with induction therapy) if not already on treatment with Alphagan (no screening period required).

### Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Assessor <sup>[1]</sup>

Blinding implementation details:

The clinical trial was performed as observer-blind because of the differences in the packaging of both drugs. The investigational medicinal product has a special container closure system. The clinical trial site has to have blind and not-blind clinical trial personnel. Blind personnel make all contacts with patients and perform all clinical trial-related examinations, whereas not-blind personnel are responsible for clinical trial medication distribution and collection.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Brimonidine

Arm description:

Preservative-free Brimonidine (2mg/ml) eye drops should be administered topically in the eye. The administration of the eye drops must be done as indicated: One drop in each eye twice daily, in the morning and evening approximately 12 hours apart.

Arm type	Experimental
Investigational medicinal product name	Preservative-free Brimonidine (2 mg/ml) eye drops
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Eye drops
Routes of administration	Topical use

Dosage and administration details:

Treatment will be eye drops, which should be administered topically in the eye. The administration of the eye drops must be done as indicated: One drop in each eye twice daily, in the morning and evening approximately 12 hours apart,

<b>Arm title</b>	Alphagan
------------------	----------

Arm description:

Alphagan eye drops should be administered topically in the eye. The administration of the eye drops must be done as indicated: One drop in each eye twice daily, in the morning and evening approximately 12 hours apart.

Arm type	Active comparator
Investigational medicinal product name	Alphagan eye drops
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Eye drops
Routes of administration	Topical use

Dosage and administration details:

Treatment will be eye drops, which should be administered topically in the eye. The administration of the eye drops must be done as indicated: One drop in each eye twice daily, in the morning and evening

approximately 12 hours apart.

---

Notes:

[1] - The roles blinded appear inconsistent with a simple blinded trial.

Justification: The clinical trial was performed as observer-blind because of the differences in the packaging of both drugs. The investigational medicinal product has a special container closure system. The clinical trial site has to have blind and not-blind clinical trial personnel. Blind personnel make all contacts with patients and perform all clinical trial-related examinations, whereas not-blind personnel are responsible for clinical trial medication distribution and collection.

<b>Number of subjects in period 1</b>	Brimonidine	Alphagan
Started	86	84
Completed	73	76
Not completed	13	8
Consent withdrawn by subject	6	2
High IOP	-	2
Adverse event, non-fatal	4	2
Lost to follow-up	1	2
Prohibited concomitant treatment	1	-
Protocol deviation	1	-

## Baseline characteristics

### Reporting groups

Reporting group title	Brimonidine
-----------------------	-------------

Reporting group description:

Preservative-free Brimonidine (2mg/ml) eye drops should be administered topically in the eye. The administration of the eye drops must be done as indicated: One drop in each eye twice daily, in the morning and evening approximately 12 hours apart.

Reporting group title	Alphagan
-----------------------	----------

Reporting group description:

Alphagan eye drops should be administered topically in the eye. The administration of the eye drops must be done as indicated: One drop in each eye twice daily, in the morning and evening approximately 12 hours apart.

Reporting group values	Brimonidine	Alphagan	Total
Number of subjects	86	84	170
Age categorical Units: Subjects			
Adults (18-64 years)	32	32	64
From 65-84 years	52	51	103
85 years and over	2	1	3
Gender categorical Units: Subjects			
Female	51	48	99
Male	35	36	71

### Subject analysis sets

Subject analysis set title	Per Protocol Population
----------------------------	-------------------------

Subject analysis set type	Per protocol
---------------------------	--------------

Subject analysis set description:

The per protocol (PP) population includes all those of the ITT population who had no major protocol violations, who completed IOP measurements within the allowed time frames, who completed at least 4 weeks of treatment with the last dose administered before the 4 week visit, and who did not take prohibited concurrent medication. The primary analysis is based on the PP population.

Subject analysis set title	Intent-to-treat (ITT) Population
----------------------------	----------------------------------

Subject analysis set type	Intention-to-treat
---------------------------	--------------------

Subject analysis set description:

The intent-to-treat (ITT) population includes all randomized patients who had at least one post baseline diurnal IOP-measurement.

Reporting group values	Per Protocol Population	Intent-to-treat (ITT) Population	
Number of subjects	149	170	
Age categorical Units: Subjects			
Adults (18-64 years)	56	64	
From 65-84 years	92	103	
85 years and over	1	3	

Gender categorical			
Units: Subjects			
Female	88	99	
Male	61	71

## End points

### End points reporting groups

Reporting group title	Brimonidine
Reporting group description: Preservative-free Brimonidine (2mg/ml) eye drops should be administered topically in the eye. The administration of the eye drops must be done as indicated: One drop in each eye twice daily, in the morning and evening approximately 12 hours apart.	
Reporting group title	Alphagan
Reporting group description: Alphagan eye drops should be administered topically in the eye. The administration of the eye drops must be done as indicated: One drop in each eye twice daily, in the morning and evening approximately 12 hours apart.	
Subject analysis set title	Per Protocol Population
Subject analysis set type	Per protocol
Subject analysis set description: The per protocol (PP) population includes all those of the ITT population who had no major protocol violations, who completed IOP measurements within the allowed time frames, who completed at least 4 weeks of treatment with the last dose administered before the 4 week visit, and who did not take prohibited concurrent medication. The primary analysis is based on the PP population.	
Subject analysis set title	Intent-to-treat (ITT) Population
Subject analysis set type	Intention-to-treat
Subject analysis set description: The intent-to-treat (ITT) population includes all randomized patients who had at least one post baseline diurnal IOP-measurement.	

### Primary: Mean diurnal IOP change from baseline to last visit

End point title	Mean diurnal IOP change from baseline to last visit
End point description: The primary endpoint was the mean diurnal IOP change from baseline to last visit and the primary efficacy analysis was planned and carried out as a test of noninferiority. Then, the analysis of covariance (ANCOVA) model was used to analyse the mean change in diurnal IOP with baseline IOP as the covariate, and treatment as factor. The treatment difference and a two-sided 95% confidence interval (CI) for the difference are calculated. The preservative-free Brimonidine eye drops (Test) is considered to be non-inferior to the marketed Alphagan™ including preservative (Reference), if the upper limit of the 95% CI of the difference is $< \Delta NI$ , where $\Delta NI=1.5$ mmHg is the non-inferiority criterion. The $\Delta NI$ is non-inferiority margin and the value $\Delta NI=1.5$ mmHg is the commonly used tolerance criterion in non-inferiority glaucoma studies.	
End point type	Primary
End point timeframe: from baseline to week 4	

End point values	Brimonidine	Alphagan		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	73	76		
Units: mmHg				
arithmetic mean (standard deviation)				
mean IOP at baseline	16.034 ( $\pm$ 2.140)	15.254 ( $\pm$ 2.605)		
mean IOP at week 1	15.575 ( $\pm$ 2.472)	15.450 ( $\pm$ 2.320)		
mean IOP at week 2	15.493 ( $\pm$ 2.301)	15.412 ( $\pm$ 2.221)		

mean IOP at week 4	15.370 ( $\pm$ 2.294)	15.489 ( $\pm$ 2.362)		
--------------------	-----------------------	-----------------------	--	--

## Statistical analyses

<b>Statistical analysis title</b>	Mean change in diurnal IOP
Statistical analysis description:	
The main efficacy parameter, diurnal IOP, was evaluated at enrolment, baseline visit, each visit (weeks 1 and 2), and at the end of the treatment period (week 4). At baseline visit and during the following visits (weeks 1, 2 and 4) the IOP was measured at 8am, 12am and 16pm. Then, the mean diurnal IOP was calculated using the measurements in both eyes. If only one eye fulfilled the criteria the mean was calculated using the measurements in the respective eye.	
Comparison groups	Brimonidine v Alphagan
Number of subjects included in analysis	149
Analysis specification	Pre-specified
Analysis type	non-inferiority <sup>[1]</sup>
P-value	< 0.05
Method	ANCOVA
Parameter estimate	Mean difference (final values)
Point estimate	-0.603
Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.217
upper limit	0.012
Variability estimate	Standard deviation

Notes:

[1] - The preservative-free Brimonidine 0.2%w/v eye drops (Test, T) is considered to be non-inferior to the marketed Alphagan™ 0.2%w/v eye drops containing preservative (Reference, R), if the upper limit of the 95% CI of the difference (T-R) is <  $\Delta$ NI, where  $\Delta$ NI = 1.5 mmHg is the non-inferiority criterion as defined in the study protocol.

## Secondary: mean change in IOP between baseline and week 1

End point title	mean change in IOP between baseline and week 1
End point description:	
A secondary efficacy end point was the mean change in IOP between baseline and week 1.
