

## Clinical trial results:

**A three arm randomized, open-label Phase II study of radium-223 dichloride 50 kBq/kg (55 kBq/kg after implementation of NIST update) versus 80 kBq/kg (88 kBq/kg after implementation of NIST update), and versus 50 kBq/kg (55 kBq/kg after implementation of NIST update) in an extended dosing schedule in subjects with castration-resistant prostate cancer metastatic to the bone**

### Summary

EudraCT number	2013-003118-42
Trial protocol	DE IT CZ SE FI ES GB
Global end of trial date	09 August 2018

### Results information

Result version number	v1 (current)
This version publication date	17 July 2019
First version publication date	17 July 2019

### Trial information

#### Trial identification

Sponsor protocol code	BAY88-8223/16507
-----------------------	------------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02023697
WHO universal trial number (UTN)	-

Notes:

### Sponsors

Sponsor organisation name	Bayer AG
Sponsor organisation address	Kaiser-Wilhelm-Allee, Leverkusen, Germany, D-51368
Public contact	Therapeutic Area Head, Bayer AG, clinical-trials-contact@bayer.com
Scientific contact	Therapeutic Area Head, Bayer AG, clinical-trials-contact@bayer.com

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 August 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	09 August 2018
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

Co-primary objectives:

- To evaluate efficacy as measured by symptomatic skeletal event-free survival (SSE-FS) of radium-223 dichloride 55 kBq/kg for up to 6 doses compared to radium-223 dichloride 88 kBq/kg for up to 6 doses in subjects with CRPC metastatic to the bone; and

- To evaluate efficacy as measured by SSE-FS of radium-223 dichloride 55 kBq/kg for up to 6 additional doses compared to no further radium-223 dichloride treatment in subjects with CRPC metastatic to the bone who previously received radium-223 dichloride 55 kBq/kg for up to 6 doses.

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with ethical principles that have their origin in the Declaration of Helsinki and the International Council for Harmonization guideline E6: Good Clinical Practice. Before entering the study, the informed consent form was read by and explained to all the subjects. Participating subjects signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy:

Concomitant best standard of care (BSoC) was permitted according to local clinical practice. Allowed treatments for prostate cancer included anti-androgenic therapies (detailed list in full protocol), surgery, and radiation. Subjects should have remained castrated during the study period (surgically or chemically). Initiation, maintenance or discontinuation of osteoclast inhibitors were left to the discretion of the investigator.

Cytotoxic chemotherapy for prostate cancer, other systemic radioisotopes, concomitant hemibody External beam radiotherapy (EBRT), or other investigational drugs were not to be used during the treatment period. If prohibited therapies were considered BSoC during the treatment period, further radium-223 dichloride administrations must have been discontinued, and if possible, prohibited treatment was not to be given within 30 days after the last injection of radium-223 dichloride.

Evidence for comparator: -

Actual start date of recruitment	10 March 2014
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	7 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 17
Country: Number of subjects enrolled	Sweden: 14

Country: Number of subjects enrolled	United Kingdom: 12
Country: Number of subjects enrolled	Czech Republic: 4
Country: Number of subjects enrolled	Germany: 6
Country: Number of subjects enrolled	Italy: 23
Country: Number of subjects enrolled	Canada: 51
Country: Number of subjects enrolled	Israel: 70
Country: Number of subjects enrolled	China: 6
Country: Number of subjects enrolled	United States: 83
Country: Number of subjects enrolled	Chile: 4
Country: Number of subjects enrolled	Australia: 56
Country: Number of subjects enrolled	Korea, Republic of: 39
Country: Number of subjects enrolled	France: 6
Worldwide total number of subjects	391
EEA total number of subjects	82

Notes:

---

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	89
From 65 to 84 years	292
85 years and over	10

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Of the 391 participants assigned to treatment in the intention to treatment (ITT) analysis set, 370 participants (94.6%) received at least one dose of radium-223 dichloride, and a total of 21 participants (5.4%) never received treatment.

### Period 1

Period 1 title	Treatment Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Radium-223 dichloride 55 kBq/kg, 6 doses (Arm A)

Arm description:

Participants who were randomized in a 1:1:1 fashion received Radium-223 dichloride (Xofigo, BAY88-8223) 55 kBq/kg intravenously (IV) every 28 days for up to 6 doses ("standard dose"). Participants who discontinued study treatment and who did not have an SSE entered an active follow-up period with clinic visits. Participants from the treatment period or the active follow-up period with clinic visits who could no longer travel entered an active follow-up period without clinic visits. All study participants eligible for further follow-up were either in this study or in a separate long term follow-up study for up to 7 years.

Arm type	Experimental
Investigational medicinal product name	Radium-223 dichloride
Investigational medicinal product code	BAY88-8223
Other name	Xofigo
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Radium-223 dichloride (Xofigo, BAY88-8223) was administered 55 kBq/kg intravenously (IV) every 28 days for up to 6 doses ("standard dose")

<b>Arm title</b>	Radium-223 dichloride 88 kBq/kg, 6 doses (Arm B)
------------------	--------------------------------------------------

Arm description:

Participants who were randomized in a 1:1:1 fashion received Radium-223 dichloride (Xofigo, BAY88-8223) 88 kBq/kg IV every 28 days for up to 6 doses ("high dose"). Participants who discontinued study treatment and who did not have an SSE entered an active follow-up period with clinic visits. Participants from the treatment period or the active follow-up period with clinic visits who could no longer travel entered an active follow-up period without clinic visits. All study participants eligible for further follow-up were either in this study or in a separate long term follow-up study for up to 7 years.

Arm type	Experimental
Investigational medicinal product name	Radium-223 dichloride
Investigational medicinal product code	BAY88-8223
Other name	Xofigo
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Radium-223 dichloride (Xofigo, BAY88-8223) was administered 88 kBq/kg intravenously (IV) every 28 days for up to 6 doses ("high dose")

<b>Arm title</b>	Radium-223 dichloride 55 kBq/kg, 12 doses (Arm C)
------------------	---------------------------------------------------

**Arm description:**

Participants who were randomized in a 1:1:1 fashion received Radium-223 dichloride (Xofigo, BAY88-8223) 55 kBq/kg IV every 28 days for up to 12 doses ("extended dose"). Participants who discontinued study treatment and who did not have an SSE entered an active follow-up period with clinic visits. Participants from the treatment period or the active follow-up period with clinic visits who could no longer travel entered an active follow-up period without clinic visits. All study participants eligible for further follow-up were either in this study or in a separate long term follow-up study for up to 7 years.

Arm type	Experimental

6-20 metastases	52	53	52
>20 lesions but not a superscan	47	48	54
Superscan	12	6	6
Average Worst Pain Score (WPS)			
Brief Pain Short Form (BPI-SF) encompasses 4 different items to capture the variability of pain over time (pain at its "worst," "least," "average," and "now"). Only the worst pain score (WPS) in the last 24 hours was assessed (a visual analogic scale ranging 0-10, with 0 meaning "no pain" and 10 meaning "pain as bad as you can imagine"), and the mean score of the 7 days prior to the study visit or telephone contact was calculated and this value was recorded in the participant's reported outcome pain data. Actual number of participants analyzed in Arm A, B, C was 128, 128 and 122, respectively			
Units: scores on a scale			
arithmetic mean	3.6	3.3	3.4
standard deviation	± 2.6	± 2.5	± 2.6
Time from initial prostate cancer diagnosis to randomization Units: months			
median	58.9	72.9	67.1
full range (min-max)	2 to 285	7 to 279	8 to 396
Time from initial bone metastases diagnosis to randomization Units: months			
median	30.8	29.9	37.5
full range (min-max)	2 to 231	1 to 170	1 to 397
Time from most recent prostate cancer progression to randomization			
The last assessment collected prior to randomization was used as baseline value. If no assessment was done prior to randomization, then the assessment collected after randomization but prior to first dose was used as baseline. Number of analyzed reflect the participants with data available at baseline. Actual number of participants analyzed in Arm A was 129.			

Units: months			
median	1.4	1.4	1.3
full range (min-max)	0 to 8	0 to 9	0 to 10
Time from most recent bone metastases progression to randomization			
The last assessment collected prior to randomization was used as baseline value. If no assessment was done prior to randomization, then the assessment collected after randomization but prior to first dose was used as baseline. Number of analyzed reflect the participants with data available at baseline. Actual number of subjects analyzed in Arm A, B, C was 118, 119, and 121, respectively.			
Units: months			
median	2.3	2.8	1.9
full range (min-max)	0 to 34	0 to 93	0 to 41
Body Mass Index			
The last assessment collected prior to randomization was used as baseline value. If no assessment was done prior to randomization, then the assessment collected after randomization but prior to first dose was used as baseline. Number of analyzed reflect the participants with data available at baseline. Actual number of participants analyzed in Arm A, B, C was 126, 127, and 124, respectively.			
Units: kg/m <sup>2</sup>			
arithmetic mean	28.4	28.0	29.1
standard deviation	± 5.2	± 5.2	± 5.4
Time from first bone metastases progression to most recent progression			
The last assessment collected prior to randomization was used as baseline value. If no assessment was done prior to randomization, then the assessment collected after randomization but prior to first dose was used as baseline. Number of analyzed reflect the participants with data available at baseline. Actual number of participants analyzed in Arm A, B, C was 118, 119, and 120, respectively.			
Units: months			
median	7.9	8.9	13.4
full range (min-max)	0 to 72	0 to 71	0 to 120

Average Worst Pain Score (WPS)			
Brief Pain Short Form (BPI-SF) encompasses 4 different items to capture the variability of pain over time (pain at its "worst," "least," "average," and "now"). Only the worst pain score (WPS) in the last 24 hours was assessed (a visual analogic scale ranging 0-10, with 0 meaning "no pain" and 10 meaning "pain as bad as you can imagine"), and the mean score of the 7 days prior to the study visit or telephone contact was calculated and this value was recorded in the participant's reported outcome pain data. Actual number of participants analyzed in Arm A, B, C was 128, 128 and 122, respectively			
Units: scores on a scale			
arithmetic mean			
standard deviation	-		
Time from initial prostate cancer diagnosis to randomization Units: months			
median			
full range (min-max)	-		
Time from initial bone metastases diagnosis to randomization Units: months			
median			
full range (min-max)	-		
Time from most recent prostate cancer progression to randomization			
The last assessment collected prior to randomization was used as baseline value. If no assessment was done prior to randomization, then the assessment collected after randomization but prior to first dose was used as baseline. Number of analyzed reflect the participants with data available at baseline. Actual number of participants analyzed in Arm A was 129.			

Units: months median full range (min-max)	-		
Time from most recent bone metastases progression to randomization			
The last assessment collected prior to randomization was used as baseline value. If no assessment was done prior to randomization, then the assessment collected after randomization but prior to first dose was used as baseline. Number of analyzed reflect the participants with data available at baseline. Actual number of subjects analyzed in Arm A, B, C was 118, 119, and 121, respectively.			
Units: months median full range (min-max)	-		
Body Mass Index			
The last assessment collected prior to randomization was used as baseline value. If no assessment was done prior to randomization, then the assessment collected after randomization but prior to first dose was used as baseline. Number of analyzed reflect the participants with data available at baseline. Actual number of participants analyzed in Arm A, B, C was 126, 127, and 124, respectively.			
Units: kg/m <sup>2</sup> arithmetic mean standard deviation	-		
Time from first bone metastases progression to most recent progression			
The last assessment collected prior to randomization was used as baseline value. If no assessment was done prior to randomization, then the assessment collected after randomization but prior to first dose was used as baseline. Number of analyzed reflect the participants with data available at baseline. Actual number of participants analyzed in Arm A, B, C was 118, 119, and 120, respectively.			
Units: months median full range (min-max)	-		

## End points

### End points reporting groups

Reporting group title	Radium-223 dichloride 55 kBq/kg, 6 doses (Arm A)
Reporting group description: Participants who were randomized in a 1:1:1 fashion received Radium-223 dichloride (Xofigo, BAY88-8223) 55 kBq/kg intravenously (IV) every 28 days for up to 6 doses ("standard dose"). Participants who discontinued study treatment and who did not have an SSE entered an active follow-up period with clinic visits. Participants from the treatment period or the active follow-up period with clinic visits who could no longer travel entered an active follow-up period without clinic visits. All study participants eligible for further follow-up were either in this study or in a separate long term follow-up study for up to 7 years.	
Reporting group title	Radium-223 dichloride 88 kBq/kg, 6 doses (Arm B)
Reporting group description: Participants who were randomized in a 1:1:1 fashion received Radium-223 dichloride (Xofigo, BAY88-8223) 88 kBq/kg IV every 28 days for up to 6 doses ("high dose"). Participants who discontinued study treatment and who did not have an SSE entered an active follow-up period with clinic visits. Participants from the treatment period or the active follow-up period with clinic visits who could no longer travel entered an active follow-up period without clinic visits. All study participants eligible for further follow-up were either in this study or in a separate long term follow-up study for up to 7 years.	
Reporting group title	Radium-223 dichloride 55 kBq/kg, 12 doses (Arm C)
Reporting group description: Participants who were randomized in a 1:1:1 fashion received Radium-223 dichloride (Xofigo, BAY88-8223) 55 kBq/kg IV every 28 days for up to 12 doses ("extended dose"). Participants who discontinued study treatment and who did not have an SSE entered an active follow-up period with clinic visits. Participants from the treatment period or the active follow-up period with clinic visits who could no longer travel entered an active follow-up period without clinic visits. All study participants eligible for further follow-up were either in this study or in a separate long term follow-up study for up to 7 years.	
Reporting group title	Radium-223 dichloride 55 kBq/kg, 6 doses (Arm A)

Reporting group title	Radium-223 dichloride 55 kBq/kg, 12 doses (Arm C)
-----------------------	---------------------------------------------------

#### Reporting group description:

Participants who were randomized in a 1:1:1 fashion received Radium-223 dichloride 55 kBq/kg IV every 28 days for up to 12 doses ("extended dose"). Participants who discontinued study treatment and who did not have an SSE entered an active follow-up period with clinic visits. Participants from the treatment period or the active follow-up period with clinic visits who could no longer travel entered an active follow-up period without clinic visits. All study participants eligible for further follow-up were either in this study or in a separate long term follow-up study for up to 7 years.

Subject analysis set title	Pooled Radium-223 55 kBq/kg (Arms A and C)
Subject analysis set type	Sub-group analysis

#### Subject analysis set description:

Pooled Arms A and C, participants who were randomized in a 1:1:1 fashion received radium-223 dichloride 55 kBq/kg IV every 28 days for up to 6 and 12 doses, respectively.

### Primary: Number of Participants with an Event Defining SSE Free Survival - High dose vs. Standard dose

End point title	Number of Participants with an Event Defining SSE Free Survival - High dose vs. Standard dose <sup>[1][2]</sup>
-----------------	-----------------------------------------------------------------------------------------------------------------

#### End point description:

Symptomatic skeletal event (SSE) free survival is based on the following events: the use of external beam radiotherapy (EBRT) to relieve skeletal symptoms; the occurrence of new symptomatic pathological bone fractures (vertebral or nonvertebral); the occurrence of spinal cord compression; a tumor related orthopedic surgical intervention, and death. In this evaluation - comparison 1, SSE-FS following randomization is defined in ITT participants as the time from randomization to an SSE or death, whichever occurs first.

End point type	Primary
----------------	---------

#### End point timeframe:

From randomization to 135 SSE-FS events have been observed in comparison 1 or 75 SSE-FS events observed in comparison 2, whichever occurred last (approximately 36 months from first patient randomization)

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The statistical analysis in this end point is descriptive, comparison analysis results are presented in following end point.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Arm A and C were pooled together as 'standard dose' group based on pre-specified pooling rule.

End point values	Radium-223 dichloride 88 kBq/kg, 6 doses (Arm B)	Pooled Radium-223 55 kBq/kg (Arms A and C)		
Subject group type	Reporting group	Subject analysis set		
Number of subjects analysed	130	261		
Units: Count of Participants	85	118

### Secondary: Number of Participants With a Pain Progression Event – High dose vs. Standard dose

End point title	Number of Participants With a Pain Progression Event – High dose vs. Standard dose <sup>[49]</sup>
-----------------	----------------------------------------------------------------------------------------------------

End point description:

Participants were divided in 3 groups according to baseline pain evaluation: asymptomatic subjects (WPS 0 to  $< 1$  at baseline); mildly symptomatic subjects (WPS 1-3 at baseline); and symptomatic subjects with WPS  $> 3$  and  $\leq 7$  at baseline). Pain progression was defined as the occurrence of a pain increase of 2 or more points in the average (i.e., average of 7-day assessments) "worst pain in 24 hours" score from baseline observed at 2 consecutive evaluations  $\geq 4$  weeks apart. Participants with insufficient applicable baseline assessments or without adequate post-baseline assessments were to be censored at the applicable baseline date.

End point type	Secondary
----------------	-----------

End point timeframe:

From randomization to 135 SSE-FS events have been observed in comparison 1 or 75 SSE-FS events observed in comparison 2, whichever occurred last (approximately 36 months from first patient

randomization)

Notes:

[49] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Arm A and C were pooled together as 'standard dose' group based on pre-specified pooling rule.

<b>End point values</b>	Radium-223 dichloride 88 kBq/kg, 6 doses (Arm B)	Pooled Radium-223 55 kBq/kg (Arms A and C)		
Subject group type	Reporting group	Subject analysis set		
Number of subjects analysed	113	218 <sup>[50]</sup>		
Units: participants	31	68		

Notes:

[50] - Data from Arm C are truncated at 7th dose date when pooling with Arm A.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 August 2013	Addition of an inclusion criteria to only include subjects who are at least 18 years of age. Addition of an inclusion criteria for sexually active males and/or their partners to use effective birth control during the treatment period and for 6 months after last dose of radium-223 dichloride. Revised definition of bone progression based on the adapted PCWG2 criteria for consistency across the radium-223 program following comments from the FDA on another related radium-223 study. This change affected the time points of radiological assessments. Clarification of central review of radiological and quantitated bone scan endpoints. Addition of a study specific dose modification to mandate discontinuation of treatment with radium-223 dichloride in subjects who experience Grade 4 neutropenia lasting > 7 days despite adequate treatment.
19 November 2013	Reorganization of the inclusion criterion to specify serum PSA $\geq 2$ ng/mL as an inclusion criterion for castration-resistant disease. Update to the radium-223 dichloride dosing and dose calibration to reflect the revised NIST standard. Removal of the dosing restriction with bisphosphonates Addition of an efficacy analysis set (Week 24 analysis set).
13 August 2015	Update to procedures for long-term follow-up. Update to analysis for Comparison 2 from 24 weeks to the 6th dose.
16 May 2017	Addition that radium-223 dichloride should not be given with abiraterone plus prednisone/prednisolone. New request that bone fractures and bone associated events (e.g., osteoporosis) need to be reported as (S)AEs, including during long term follow-up, regardless of causality to study treatment. Based on the available data on radium-223 dichloride, initiation of BHAs during the follow-up periods, including bisphosphonates or denosumab, should be considered, taking into consideration applicable guidelines.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Arms in active follow-up period were mutually exclusive, it was marked no due to database constraints (period start number must equal completed number of preceding period.)

Notes:
