

## Clinical trial results:

### Phase III study of Palbociclib (PD-0332991) in combination with Exemestane versus chemotherapy (capecitabine) in Hormonal Receptor (HR) positive/HER2 negative Metastatic Breast Cancer (MBC) patients with Resistance to non-steroidal Aromatase inhibitors The PEARL study

#### Summary

EudraCT number	2013-003170-27
Trial protocol	ES AT HU LV IE
Global end of trial date	11 January 2021

#### Results information

Result version number	v1
This version publication date	18 April 2022
First version publication date	18 April 2022

#### Trial information

##### Trial identification

Sponsor protocol code	GEICAM/2013-02
-----------------------	----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02028507
WHO universal trial number (UTN)	-

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 May 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	14 January 2019
Global end of trial reached?	Yes
Global end of trial date	11 January 2021
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To demonstrate that palbociclib in combination with exemestane is superior to capecitabine in prolonging Progression-Free Survival (PFS) in postmenopausal women with HR positive/HER2 negative MBC whose disease was resistant to non-steroidal aromatase inhibitors.

Protection of trial subjects:

Not applicable. It was not necessary to applied extra measures for protection of the subjects out of the good clinical practice environment.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	12 March 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 15
Country: Number of subjects enrolled	Spain: 488
Country: Number of subjects enrolled	Hungary: 59
Country: Number of subjects enrolled	Israel: 39
Worldwide total number of subjects	601
EEA total number of subjects	562

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	391
From 65 to 84 years	205
85 years and over	5

## Subject disposition

### Recruitment

Recruitment details:

92 patients were screening failure. A total of 601 patients were included in this study from March 2014 to July 2018. Cohort 1 included 296 patients (153 on palbociclib plus exemestane and 143 on capecitabine) and cohort 2 included 305 patients (149 on palbociclib plus fulvestrant and 156 on capecitabine).

### Pre-assignment

Screening details:

92 patients were screening failure. A total of 601 patients were included in this study from March 2014 to July 2018. Cohort 1 included 296 patients (153 on palbociclib plus exemestane and 143 on capecitabine) and cohort 2 included 305 patients (149 on palbociclib plus fulvestrant and 156 on capecitabine).

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Cohort 1: Arm A: Palbociclib Plus Exemestane

Arm description:

Palbociclib 125 mg orally once daily on Day 1 to Day 21 followed by 7 days off treatment on every 28 days cycles in combination with Exemestane 25 mg orally once daily

Arm type	Experimental
Investigational medicinal product name	Palbociclib
Investigational medicinal product code	
Other name	Ibrance
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Palbociclib will be administered at a dose of 125mg PO daily on Day 1 to Day 21 following a 1 week of rest period, given as 4 weeks cycles.

Investigational medicinal product name	Exemestane
Investigational medicinal product code	
Other name	Aromasil
Pharmaceutical forms	Coated tablet
Routes of administration	Oral use

Dosage and administration details:

Exemestane will be administered at a dose of 25 mg PO daily (continuously).

<b>Arm title</b>	Cohort 1: Arm B: Capecitabine
------------------	-------------------------------

Arm description:

Capecitabine, 1,250 mg/m<sup>2</sup> twice daily for 2 weeks followed by a 1 week rest period, given as 3 weeks cycles. Capecitabine must be administered at a dose of 1,000 mg/m<sup>2</sup> twice daily for 2 weeks followed by a 1 week of rest period, given as 3 weeks cycles, in patients over 70 years of age.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Capecitabine
Investigational medicinal product code	
Other name	Xeloda
Pharmaceutical forms	Coated tablet
Routes of administration	Oral use

**Dosage and administration details:**

Capecitabine will be administered at a dose of 1,250mg/m<sup>2</sup> twice daily for 2 weeks followed by a 1 week of rest period, given as 3 weeks cycles.

Capecitabine must be administered at a dose of 1,000mg/m<sup>2</sup> twice daily for 2 weeks followed by a 1 week of rest period, given as 3 weeks cycles, in patients over 70 years of age.

Capecitabine Dose will be calculated for each patient in mg/m<sup>2</sup>, it is recommended to calculate the dose according to the Protocol Attachment 4. The real Body Surface Area (BSA) of the patient determined in the baseline visit will be the reference BSA throughout the study. The BSA and the capecitabine dose will be recalculated in the event that patients experience body weight variations greater than 10% during the treatment period.

<b>Arm title</b>	Cohort 2: Palbociclib Plus Fulvestrant
------------------	--

**Arm description:**

Palbociclib 125 mg orally once daily on Day 1 to Day 21 followed by 7 days off treatment on every 28 days cycles in combination with Fulvestrant 500 mg on Days 1 and 15 of Cycle 1, and Day 1 of each subsequent 28 days Cycle.

Arm type	Experimental
Investigational medicinal product name	Palbociclib
Investigational medicinal product code	
Other name	Ibrance
Pharmaceutical forms	Capsule
Routes of administration	Oral use

**Dosage and administration details:**

Palbociclib will be administered at a dose of 125mg PO daily on Day 1 to Day 21 following a 1 week of rest period, given as 4 weeks cycles.

Investigational medicinal product name	Fulvestrant
Investigational medicinal product code	
Other name	Faslodex
Pharmaceutical forms	Emulsion for injection/infusion in pre-filled syringe
Routes of administration	Concentrate for solution for infusion

**Dosage and administration details:**

Fulvestrant will be administered at a dose of 500mg, as two 5ml intramuscular injections (one in each buttock), on days 1 and 15 (±3 days) of Cycle 1, and then on Day 1 of each subsequent 28 days Cycle (± 3 days). Time windows extended to ±7 days after 24 weeks.

<b>Arm title</b>	Cohort 2: Arm B: Capecitabine
------------------	-------------------------------

**Arm description:**

Capecitabine, 1,250 mg/m<sup>2</sup> twice daily for 2 weeks followed by a 1 week rest period, given as 3 weeks cycles. Capecitabine must be administered at a dose of 1,000 mg/m<sup>2</sup> twice daily for 2 weeks followed by a 1 week of rest period, given as 3 weeks cycles, in patients over 70 years of age

Arm type	Active comparator
Investigational medicinal product name	Capecitabine
Investigational medicinal product code	
Other name	Xeloda
Pharmaceutical forms	Coated tablet
Routes of administration	Oral use

**Dosage and administration details:**

Capecitabine will be administered at a dose of 1,250mg/m<sup>2</sup> twice daily for 2 weeks followed by a 1 week of rest period, given as 3 weeks cycles.

Capecitabine must be administered at a dose of 1,000mg/m<sup>2</sup> twice daily for 2 weeks followed by a 1 week of rest period, given as 3 weeks cycles, in patients over 70 years of age.

Capecitabine Dose will be calculated for each patient in mg/m<sup>2</sup>, it is recommended to calculate the dose according to the Protocol Attachment 4. The real Body Surface Area (BSA) of the patient determined in the baseline visit will be the reference BSA throughout the study. The BSA and the

capecitabine dose will be recalculated in the event that patients experience body weight variations greater than 10% during the treatment period.

## End points

### End points reporting groups

Reporting group title	Cohort 1: Arm A: Palbociclib Plus Exemestane
Reporting group description: Palbociclib 125 mg orally once daily on Day 1 to Day 21 followed by 7 days off treatment on every 28 days cycles in combination with Exemestane 25 mg orally once daily	
Reporting group title	Cohort 1: Arm B: Capecitabine
Reporting group description: Capecitabine, 1,250 mg/m <sup>2</sup> twice daily for 2 weeks followed by a 1 week rest period, given as 3 weeks cycles. Capecitabine must be administered at a dose of 1,000 mg/m <sup>2</sup> twice daily for 2 weeks followed by a 1 week of rest period, given as 3 weeks cycles, in patients over 70 years of age.	
Reporting group title	Cohort 2: Palbociclib Plus Fulvestrant
Reporting group description: Palbociclib 125 mg orally once daily on Day 1 to Day 21 followed by 7 days off treatment on every 28 days cycles in combination with Fulvestrant 500 mg on Days 1 and 15 of Cycle 1, and Day 1 of each subsequent 28 days Cycle.	
Reporting group title	Cohort 2: Arm B: Capecitabine
Reporting group description: Capecitabine, 1,250 mg/m <sup>2</sup> twice daily for 2 weeks followed by a 1 week rest period, given as 3 weeks cycles. Capecitabine must be administered at a dose of 1,000 mg/m <sup>2</sup> twice daily for 2 weeks followed by a 1 week of rest period, given as 3 weeks cycles, in patients over 70 years of age	
Subject analysis set title	Exemestane or Fulvestrant + Palbo ESR1 wild type population
Subject analysis set type	Per protocol
Subject analysis set description: The ESR1 wild type population will include all patients who are randomized, with study drug/medication assignment designated according to initial randomization and whose tumor had estrogen receptor (ESR1) mutational status as wild type at study entry. ESR1 wild type population include patients with ESR1 mutational status as wild type at study entry. • Exemestane or Fulvestrant plus Palbociclib ESR1 wild type population: Cohort 1 (n=153) of which ESR1 wild type (n=104) and cohort 2 (n=149) of which ESR1 wild type (n=102). Total ESR1 wild type 206 • Capecitabine ESR1 wild type population: Cohort 1 (n=143) of which ESR1 wild type (n=89) and cohort 2 (n=156) of which ESR1 wild type (n=98). Total ESR1 wild type 187	
Subject analysis set title	Capecitabine ESR1 Wild Type Population
Subject analysis set type	Per protocol
Subject analysis set description: The ESR1 wild type population will include all patients who are randomized, with study drug/medication assignment designated according to initial randomization and whose tumor had estrogen receptor (ESR1) mutational status as wild type at study entry. ESR1 wild type population include patients with ESR1 mutational status as wild type at study entry. • Exemestane or Fulvestrant plus Palbociclib ESR1 wild type population: Cohort 1 (n=153) of which ESR1 wild type (n=104) and cohort 2 (n=149) of which ESR1 wild type (n=102). Total ESR1 wild type 206 • Capecitabine ESR1 wild type population: Cohort 1 (n=143) of which ESR1 wild type (n=89) and cohort 2 (n=156) of which ESR1 wild type (n=98). Total ESR1 wild type 187	
Subject analysis set title	Cohort 1 and 2: (Exemestane or Fulvestrant) Plus Palbociclib
Subject analysis set type	Per protocol
Subject analysis set description: • Cohort 1: Palbociclib 125 mg orally once daily on Day 1 to Day 21 followed by 7 days off treatment on every 28 days cycles in combination with Exemestane 25 mg orally once daily. • Cohort 2: Palbociclib 125 mg orally once daily on Day 1 to Day 21 followed by 7 days off treatment on every 28 days cycles in combination with Fulvestrant 500 mg on Days 1 and 15 of Cycle 1, and Day 1 of each subsequent 28 days Cycle.	
Subject analysis set title	Cohort 1 and 2: Capecitabine
Subject analysis set type	Per protocol

Subject analysis set description:

Capecitabine, 1,250 mg/m<sup>2</sup> twice daily for 2 weeks followed by a 1 week rest period, given as 3 weeks cycles.

Capecitabine must be administered at a dose of 1,000 mg/m<sup>2</sup> twice daily for 2 weeks followed by a 1 week of rest period, given as 3 weeks cycles, in patients over 70 years of age.

Subject analysis set title	Cohort 1 & 2: (Exemestane or Fulvestrant) + Palbo & Cape
Subject analysis set type	Sub-group analysis

Subject analysis set description:

QoL population: a subset of enrolled patients with available QoL questionnaires (the baseline and at least one more).

- Cohort 1: Palbociclib 125 mg orally once daily on Day 1 to Day 21 followed by 7 days off treatment on every 28 days cycles in combination with Exemestane 25 mg orally once daily.

Capecitabine, 1,250 mg/m<sup>2</sup> twice daily for 2 weeks followed by a 1 week rest period, given as 3 weeks cycles.

Capecitabine must be administered at a dose of 1,000 mg/m<sup>2</sup> twice daily for 2 weeks followed by a 1 week of rest period, given as 3 weeks cycles, in patients over 70 years of age.

- Cohort 2: Palbociclib 125 mg orally once daily on Day 1 to Day 21 followed by 7 days off treatment on every 28 days cycles in combination with Fulvestrant 500 mg on Days 1 and 15 of Cycle 1, and Day 1 of each subsequent 28 days Cycle.

Capecitabine, 1,250 mg/m<sup>2</sup> twice daily for 2 weeks followed by a 1 week rest period, given as 3 weeks cycles.

## Primary: Progression-Free Survival (PFS)

End point title	Progression-Free Survival (PFS) <sup>[1]</sup>
-----------------	--

End point description:

The primary efficacy variable is PFS based on the investigator's assessment. PFS is defined as the time from randomization to the first documented progressive disease based on the investigator's assessment, using RECIST version 1.1, or death from any cause, whichever occurs first.

Estrogen Receptor 1 (ESR1) mutational status will be determined in circulating free DNA (cDNA) obtained from.

Disease assessments will be performed at baseline and every 8 weeks ( $\pm$  7 days) from the start of treatment and every 12 weeks ( $\pm$  7 days) after 120 weeks of treatment baseline plasma samples and will be prospectively determined before the interims or final analyses. ESR1 mutational status will be blinded to the patients, investigators and study team.

End point type	Primary
----------------	---------

End point timeframe:

Through study treatment, and average of 8 months

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Primary objectives are to demonstrate that the combination of palbociclib-fulvestrant is superior to capecitabine in prolonging PFS and to demonstrate that palbociclib in combination with endocrine therapy (exemestane or fulvestrant) is superior to capecitabine in prolonging PFS in wild type patients.

End point values	Cohort 2: Palbociclib Plus Fulvestrant	Cohort 2: Arm B: Capecitabine	Exemestane or Fulvestrant + Palbo ESR1 wild type population	Capecitabine ESR1 Wild Type Population

## Secondary: Objective Response Rate (ORR) ESR1 Wild Type

End point title	Objective Response Rate (ORR) ESR1 Wild Type
End point description:	
Complete Response (CR) plus Partial Response (PR) based on the investigator's assessment according to the RECIST version 1.1 in patients randomized with measurable disease. Tumor assessment will be performed at baseline, the same method of measurement used at baseline will be used for further evaluations, that will be conducted every 8 weeks ( $\pm 7$ days). The best response across treatment will be recorded. OR is defined as the complete plus partial responses out of the patients who had measurable disease at baseline.	
End point type	Secondary
End point timeframe:	
Through study treatment, and average of 8 months	

End point values	Exemestane or Fulvestrant + Palbo ESR1 wild type population	Capecitabine ESR1 Wild Type Population

## Secondary: Clinical Benefit Rate (CBR) ESR1 Wild Type

End point title	Clinical Benefit Rate (CBR) ESR1 Wild Type
End point description:	
CB is defined as complete response (CR), partial response (PR), or stable disease (SD) based on the investigator's assessment lasting more than 24 weeks according to the RECIST version 1.1 in all randomized patients (ITT population). Per RECIST, CR is defined as the disappearance of all target lesions; PR is defined as an $\geq 30\%$ decrease in the sum of the longest diameter of target lesions; SD is defined as a failure to meet criteria for CR or PR in the absence of progressive disease. Overall Response	

(OR) = CR + PR.

End point type	Secondary
End point timeframe:	
Through study treatment, and average of 8 months	

End point values	Exemestane or Fulvestrant + Palbo ESR1 wild type population	Capecitabine ESR1 Wild Type Population

No statistical analyses for this end point

### Secondary: Response Duration (RD) ESR1 Wild Type

End point title	Response Duration (RD) ESR1 Wild Type
End point description:	
Tumor response was assessed using Response Evaluation Criteria In Solid Tumors Criteria (RECIST 1.1) criteria. RD was defined as the time from the first documentation of objective tumor response (complete response (CR) or partial response (PR)) to the first documented progressive disease (PD), or to death due to any cause, whichever occurs first. Per RECIST, CR is defined as the disappearance of all target lesions; PR is defined as an $\geq 30\%$ decrease in the sum of the longest diameter of target lesions; PD is defined as a 20% increase in the sum of the longest diameter of target lesions, or a measurable increase in a non-target lesion, or the appearance of new lesions	
End point type	Secondary
End point timeframe:	
Through study treatment, and average of 8 months

### Secondary: Change From Baseline Between Treatment Comparison in European Organization for Research and Treatment of Cancer Quality of Life Questionnaire (EORTC QLQ-C30) Functional Scale Scores

End point title	Change From Baseline Between Treatment Comparison in European Organization for Research and Treatment of Cancer Quality of Life Questionnaire (EORTC QLQ-C30) Functional Scale Scores
-----------------	---

#### End point description:

The EORTC QLQ C30 is a 30 item questionnaire composed of 5 multi item functional subscales (physical, role, cognitive emotional, and social functioning), 3 multi item symptom scales (fatigue, nausea/vomiting, pain), a global health/quality of life (QOL) subscale, and 6 items cancer related symptoms (dyspnea, sleep disturbance, appetite, diarrhea, constipation, financial impact of cancer). The questionnaire employs 28 4 point Likert scales with responses from "not at all" to "very much" and 2 7 point Likert scales for global health and overall QOL. For functional and global QOL scales, higher scores represent a better level of functioning and are converted to a 0 to 100 scale. For symptom oriented scales, a higher score represents more severe symptoms.

Patients completed EORTC QLQ-C30 (v3.0) at baseline, at every two cycles for the first seven cycles, then at every three cycles until the end of treatment, and once again at the visit after treatment.

End point type	Secondary
----------------	-----------

#### End point timeframe:

Baseline, cycles 3, 5, 7, then at every three cycles until the end of treatment, and at the visit after treatment

End point values	Cohort 1 and 2: (Exemestane or Fulvestrant) Plus Palbociclib	Cohort 1 and 2: Capecitabine		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	268	269

## Secondary: Change From Baseline Between Treatment Comparison in EuroQoL 5D (EQ-5D) Health Index Scores

End point title	Change From Baseline Between Treatment Comparison in EuroQoL 5D (EQ-5D) Health Index Scores
-----------------	---

End point description:

EQ 5D (version 3L) is a 6 item instrument which assess health status in terms of a single index value. It consists of 5 descriptors of current health state (mobility, self-care, usual activities, pain/discomfort, and anxiety/depression); a patient is asked to rate each state on a 3 level scale (1=no problem, 2=some problem, and 3=extreme problem) with higher levels indicating greater severity/impairment. It also includes a visual analogue scale, EQ VAS, which records patient's self-rated health on a scale from 0 (worst imaginable) to 100 (best imaginable). Published weights are available that allow for the creation of a single summary score. Overall scores range from 0 to 1, with low scores representing a higher level of dysfunction and 1 as perfect health.

EQ 5D questionnaires were completed at baseline, at every two cycles for the first seven cycles, then at every three cycles until the end of treatment, and once again at the visit after treatment.

End point type	Secondary

occurrences (all)	28	20	85
Hypoglycemia			
subjects affected / exposed	11 / 150 (7.33%)	10 / 149 (6.71%)	20 / 289 (6.92%)
occurrences (all)	29	14	50

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 December 2013	Update on the number of plasma samples needed for exploratory analyses
19 February 2014	Modify the eligibility criteria. New instructions about palbociclib administration and change information about the prohibited concomitant medication
02 March 2014	Clarify the eligibility criteria and the stratification factors.
09 March 2016	The design of the study is modified to include a new Cohort in order to provide the opportunity to confirm the clinical benefit of PAL in combination with ET in relation to ESR1 mutational status. The study objectives, the eligibility criteria and the sample size were changed according to the new study design.
12 July 2017	Modify the eligibility criteria. Add the collection of the new biological samples. Clarify the dose modification of capecitabine in case of non-haematologic toxicities. Update the list of "List of Drugs Known to Predispose to Torsade de Pointes".
24 August 2018	Clarify palbociclib and capecitabine dose modifications. Modify the mandatory assessments. Modify the eligibility criteria.
05 November 2019	Include the guidance for the clinical management of Interstitial Lung Disease (ILD)/ pneumonitis according to palbociclib IB v Jun2019

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

1. capecitabine outcome was better than initially anticipated
2. open-label study design may lead to biased interpretations
3. subtype classification for exploratory objective was carried out in 70% of patients in the primary tumour
