

Clinical trial results:

A bicentric open-label, randomized, two-parallel-group study investigating the impact of combined Lantus®(insulin glargine) and Lyxumia ®(lixisenatide) on insulin secretion and gastric emptying in subjects with Type 2 Diabetes Mellitus not adequately controlled on diet and oral antidiabetic medication

Summary

EudraCT number	2013-003171-35
Trial protocol	DE
Global end of trial date	28 October 2015

Results information

Result version number	v1 (current)
This version publication date	07 February 2020
First version publication date	07 February 2020

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 June 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	28 October 2014
Global end of trial reached?	Yes
Global end of trial date	28 October 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To address in type 2 diabetic patients compared to baseline the effect of repeated doses of Lyxumia® and Lantus® after an eight weeks two-step treatment regimen (four weeks administration of either Lyxumia® or Lantus®, both followed by their combined administration for another four weeks) on intravenous glucose tolerance test (IVGTT) related first phase insulin secretion

Protection of trial subjects:

Since the launch of GLP-1 receptor agonists, very rare cases of pancreatitis have been reported in subjects receiving this treatment. Therefore, amylase and lipase will be monitored in this study. As this monitoring may be difficult in subjects who already have high values of amylase or lipase, subjects with values above 3 times the upper limit of normal range at screening, will not be entered in the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 December 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 28
Worldwide total number of subjects	28
EEA total number of subjects	28

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	16
From 65 to 84 years	12

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

The trial was conducted at two clinical sites in Germany.

Pre-assignment

Screening details:

In total, 43 subjects were screened and 28 subjects were included in the trial and randomised to one of the two possible treatment arms.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	No
Arm title	Treatment period 1 - Iglar

Arm description:

Insulin glargine administration

Arm type	Experimental
Investigational medicinal product name	Insulin glargine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

60 days of treatment, IMP will be titrated to achieve glycemic targets without hypoglycemia.

Arm title	Treatment period 2 / Lixi-Iglar
------------------	---------------------------------

Arm description:

Lixisenatide plus Insulin glargine administration

Arm type	Experimental
Investigational medicinal product name	Lixisenatide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in cartridge
Routes of administration	Subcutaneous use

Dosage and administration details:

treatment duration 60 days; up to 20 µg microgram(s)/day

Investigational medicinal product name	Insulin glargine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

60 days of treatment, IMP will be titrated to achieve glycemic targets without hypoglycemia.

Arm title	Treatment period 1 - Lixi
------------------	---------------------------

Arm description:

Lixisenatide administration

Arm type	Experimental
Investigational medicinal product name	Lixisenatide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in cartridge
Routes of administration	Subcutaneous use

Dosage and administration details:

treatment duration 60 days; up to 20 µg microgram(s)/day

Arm title	Treatment period 2 / Iglar-Lixi
------------------	---------------------------------

Arm description:

Insulin glargine plus Lixisenatide administration

Arm type	Experimental
Investigational medicinal product name	Lixisenatide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in cartridge
Routes of administration	Subcutaneous use

Dosage and administration details:

treatment duration 60 days; up to 20 µg microgram(s)/day

Investigational medicinal product name	Insulin glargine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

60 days of treatment, IMP will be titrated to achieve glycemic targets without hypoglycemia.
