Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 October 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	13 October 2020
Global end of trial reached?	Yes
Global end of trial date	13 October 2020
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To estimate the 1-year (52-week) probability of cumulative confirmed major cytogenetic response (MCyR) in chronic phase (CP) philadelphia chromosome positive (Ph+) chronic myelogenous leukaemia (CML) subjects with 1 or 2 prior lines of tyrosine kinase inhibitors (TKI) therapy.

To estimate the 1-year (52-week) probability of cumulative confirmed MCyR in CP Ph+ CML subjects with 3 or more prior lines of TKI therapy.

To estimate the 1-year (52-week) probability of cumulative confirmed overall hematological response (OHR) in AP and BP Ph+ CML subjects with any prior TKI therapy.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	07 November 2014
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	4 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 5
Country: Number of subjects enrolled	Germany: 23
Country: Number of subjects enrolled	Spain: 24
Country: Number of subjects enrolled	France: 11
Country: Number of subjects enrolled	Italy: 42
Country: Number of subjects enrolled	Norway: 11
Country: Number of subjects enrolled	Sweden: 9
Country: Number of subjects enrolled	United States: 38
Worldwide total number of subjects	163
EEA total number of subjects	125

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	101
From 65 to 84 years	56
85 years and over	6

Subject disposition

Recruitment

Recruitment details:

Subjects with chronic phase (CP), accelerated P (AP), or blast P (BP) philadelphia chromosome positive (Ph+) chronic myelogenous leukemia (CML), or with breakpoint cluster region-abelson kinase(BCR-ABL1)+ and Philadelphia chromosome negative(Ph-), who failed prior treatment with commercially available tyrosine kinase inhibitors(TKIs) were enrolled.

Pre-assignment

Screening details:

A total of 177 subjects signed the inform consent form (ICF), 14 subjects were screen failure and 163 were enrolled into the study and assigned to study treatment. Total 163 subjects were enrolled at 48 sites in 8 countries. Study started from 07-Nov-2014 and completed on 13-Oct-2020. No subjects with BP were enrolled in the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Bosutinib: Chronic Phase 2nd Line CML

Arm description:

Subjects with philadelphia chromosome positive chronic phase 2nd line chronic myelogenous leukemia resistant or intolerant to imatinib, dasatinib, or nilotinib received bosutinib 500 milligram (mg), orally once daily until disease progression, unacceptable toxicity, withdrawal of consent, death or discontinuation of study (up to maximum of 4 years). Subjects who discontinued bosutinib prior to completing at least 4 years of therapy were followed for survival until they completed at least 4 years of follow-up from the time of first dose.

Arm type	Experimental
Investigational medicinal product name	Bosutinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Bosutinib 500 milligrams (mg) once daily.

Arm title	Bosutinib: Chronic Phase 3rd Line CML
------------------	---------------------------------------

Arm description:

Subjects with philadelphia chromosome positive chronic Phase 3rd line chronic myelogenous leukemia resistant or intolerant to imatinib and/or dasatinib and/or nilotinib received bosutinib 500 mg, orally once daily until disease progression, unacceptable toxicity, withdrawal of consent, death or discontinuation of study (up to maximum of 4 years). Subjects who discontinued bosutinib prior to completing at least 4 years of therapy were followed for survival until they completed at least 4 years of follow-up from the time of first dose.

Arm type	Experimental
Investigational medicinal product name	Bosutinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Bosutinib 500 mg once daily.

Arm title	Bosutinib: Chronic Phase 4th Line CML
Arm description:	
Subjects with philadelphia chromosome positive chronic phase 4th line chronic myelogenous leukemia resistant or intolerant to imatinib and dasatinib and nilotinib received bosutinib 500 mg, orally once daily until disease progression, unacceptable toxicity, withdrawal of consent, death or discontinuation of study (up to maximum of 4 years). Subjects who discontinued bosutinib prior to completing at least 4 years of therapy were followed for survival until they completed at least 4 years of follow-up from the time of first dose.	
Arm type	Experimental
Investigational medicinal product name	Bosutinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Bosutinib 500 mg once daily.	
Arm title	Bosutinib: Accelerated Phase CML

Arm description:	
Subjects with philadelphia chromosome positive accelerated phase chronic myelogenous leukemia resistant or intolerant to at least one tyrosine kinase inhibitor among imatinib, dasatinib, or nilotinib received bosutinib 500 mg, orally once daily until disease progression, unacceptable toxicity, withdrawal of consent, death or discontinuation of study (up to maximum of 4 years). Subjects who discontinued bosutinib prior to completing at least 4 years of therapy were followed for survival until they completed at least 4 years of follow-up from the time of first dose.	
Arm type	Experimental
Investigational medicinal product name	Bosutinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Bosutinib 500 mg once daily.	
Arm title	Bosutinib: Philadelphia Chromosome Negative CML

Arm description:	
Subjects with BCR-ABL1 positive and philadelphia chromosome negative chronic myelogenous leukemia received bosutinib 500 mg, orally once daily until disease progression, unacceptable toxicity, withdrawal of consent, death or discontinuation of study (up to maximum of 4 years). Subjects who discontinued bosutinib prior to completing at least 4 years of therapy were followed for survival until they completed at least 4 years of follow-up from the time of first dose.	
Arm type	Experimental
Investigational medicinal product name	Bosutinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Bosutinib 500 mg once daily.

Primary: Percentage of Subjects With Cumulative Confirmed Major Cytogenetic Response (MCyR) in 2nd and 3rd Line Chronic Phase (CP) Subjects

End point title	Percentage of Subjects With Cumulative Confirmed Major Cytogenetic Response (MCyR) in 2nd and 3rd Line Chronic Phase (CP) Subjects ^[1]
-----------------	---

End point description:

Confirmed MCyR: confirmed CCyR or PCyR by 1 year for subjects entering the study without CCyR or maintenance of confirmed CCyR for at least 1 year after treatment start with bosutinib for subjects entering the study with CCyR or at least MMR by 1 year and a deeper molecular response compared to baseline. Subjects with baseline PCyR that did not achieve CCyR were counted as nonresponders. Initial cytogenetic (in absence of MMR) responses must have been confirmed by 2 consecutive assessments ≥ 28 days apart. CCyR: 0% Ph+ cells from ≥ 20 metaphases from conventional cytogenetics or $< 1\%$ Ph+ cells from ≥ 200 cells from fluorescent in situ hybridization (FISH). PCyR: 1 to 35% Ph+ cells. MMR: $\leq 0.1\%$ BCR-ABL1 on the international scale (IS) with at least 10,000 ABL1 transcripts assessed by central laboratory. Evaluable set cytogenetic response: treated subjects with valid baseline efficacy assessment (≥ 20 metaphases from baseline bone marrow/CCyR with ≥ 200 cells from FISH/baseline MMR).

End point type	Primary
----------------	---------

End point timeframe:

Up to 1 year (52 weeks)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive analysis was done for this endpoint.

Secondary: Percentage of Subjects With Major Cytogenetic Response (MCyR) at Months 3, 6, 12, 18 and 24

End point title	Percentage of Subjects With Major Cytogenetic Response (MCyR) at Months 3, 6, 12, 18 and 24 ^[9]
-----------------	--

End point description:

CyR was based on prevalence of Ph+ cells. CCyR was achieved when there was 0% Ph+ cells from ≥ 20 metaphases from conventional bone marrow cytogenetics or $< 1\%$ Ph+ cells from ≥ 200 cells analysed from FISH. PCyR was achieved when 1 to 35% Ph+ cells were present. MCyR was categorised as either CCyR or PCyR. Subjects with MMR or better at baseline were counted as CCyR if baseline response was maintained or improved while on treatment. Evaluable set cytogenetic response: treated subjects with valid baseline efficacy assessment (≥ 20 metaphases from baseline bone marrow or CCyR with ≥ 200 cells from FISH or baseline MMR). Data for this endpoint was not planned to be collected and analysed for Ph- subjects.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first dose of study drug up to 28 days after last dose (up to maximum of 4 years)

Adverse event reporting additional description:

The total number of deaths occurring during study, from first dose and up to the end of the study are reported for all treated subjects and includes deaths which occurred after 28 days post last study drug dose. An event may be serious in one subject and non-serious in another/a subject may have experienced both a serious and non-serious event.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 September 2017	Updated to add new secondary endpoints composed of duration of CCyR, duration of MMR and clarifications regarding the analysis of the primary endpoint. Decreased the number of subjects in the 4th-/later-line cohort from the initial target of 75 to at least 45 subjects. Removed the requirement of karyotype imaging submission for independent central review. Updated to provide scientific rationale regarding the inclusion of the Ph- CML subjects. Dose modification guidelines updated to align with clinical practice. Disease progression criteria updated according to the CML disease phase.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
