

Clinical trial results:

A Phase II dose ranging study of Bumetanide solution in children and adolescents with autism spectrum disorders.

Summary

EudraCT number	2013-003259-39
Trial protocol	ES FR
Global end of trial date	06 July 2016

Results information

Result version number	v1 (current)
This version publication date	18 August 2021
First version publication date	18 August 2021

Trial information

Trial identification

Sponsor protocol code	NeuroClin02
-----------------------	-------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001303-PIP01-12
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 May 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 February 2016
Global end of trial reached?	Yes
Global end of trial date	06 July 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine the optimal dose strength of Bumetanide for the pivotal Phase III studies.

Age and gender characteristics as well as type of developmental disorder were not available for the completer's subject analysis set. Approximate values have therefore been entered in order to ensure the technical validation of the file.

Protection of trial subjects:

The Investigator was responsible for ensuring that the investigation was conducted according to the signed Investigator agreement, the protocol, good clinical practice guidelines, and applicable regulations; for protecting the rights, safety, and welfare of patients under the Investigator's care; and for the control of investigational products under investigation. The Investigator at each study center was responsible for the management of the study, which consisted of maintaining the study file and patient records, corresponding with the IRB/IEC, and completing the electronic case report forms (eCRFs).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 January 2014
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 88
Worldwide total number of subjects	88
EEA total number of subjects	88

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	72
Adolescents (12-17 years)	16
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 91 patients signed informed consent from January 2014 to July 2015. Three were found not to meet inclusion or exclusion criteria. A total of 88 subjects were included in the study at 7 clinical sites located in France. A total of 72 patients has completed the study.

Pre-assignment

Screening details:

Main inclusion criteria: male or female, children and adolescents, 2-18 years old, with ASD according to ICD-10 [F84.0 (Childhood Autism) or F84.5 (Asperger's Syndrome)], CARS (Childhood Autism Rating Scale) score > 34, criteria for Autism on ADOS-G (Autism Diagnosis Observation Schedule-General) and ADI-R (Autism Diagnosis Interview-Revised).

Pre-assignment period milestones

Number of subjects started	91 ^[1]
Number of subjects completed	88

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Screening failure: 3
----------------------------	----------------------

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The pre-assignment period is considered as the screening phase. 91 patients were screened, 3 were screen failures, hence the worldwide number of patients actually enrolled in the trial is 88.

Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Assessor

Blinding implementation details:

The study team at site including investigators, nurses and pharmacists, patients and patient's parent[s]. They remained blinded until database lock.

Arms

Are arms mutually exclusive?	Yes
Arm title	Bumetanide low dose

Arm description:

oral administration, liquid formulation, 0.5 mg BID for 3 months, for patients below 25 kg (0.02 mg/kg BID)

Arm type	Experimental
Investigational medicinal product name	Bumetanide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Double-blind placebo-controlled study:

Patients received Bumetanide (0.5, 1.0 or 2.0 mg BID) for 3 months. Dose was calculated on a body weight basis for patients below 25 kg (0.02, 0.04 or 0.08 mg/kg, BID).

Arm title	Bumetanide medium dose
-----------	------------------------

Arm description:

oral administration, liquid formulation, 1.0 mg BID for 3 months, for patients below 25 kg (0.04 mg/kg, BID)

Arm type	Experimental
Investigational medicinal product name	Bumetanide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Double-blind placebo-controlled study:

Patients received Bumetanide (0.5, 1.0 or 2.0 mg BID) for 3 months. Dose was calculated on a body weight basis for patients below 25 kg (0.02, 0.04 or 0.08 mg/kg, BID).

Arm title	Bumetanide high dose
------------------	----------------------

Arm description:

oral administration, liquid formulation, 2.0 mg BID for 3 months, for patients below 25 kg (0.08mg/kg,BID)

Arm type	Experimental
Investigational medicinal product name	Bumetanide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Double-blind placebo-controlled study:

Patients received Bumetanide (0.5, 1.0 or 2.0 mg BID) for 3 months. Dose was calculated on a body weight basis for patients below 25 kg (0.02, 0.04 or 0.08 mg/kg, BID).

Arm title	Placebo
------------------	---------

Arm description:

oral administration, liquid formulation, Placebo for 3 months

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Double-blind placebo-controlled study:

Patients received placebo for 3 months.

Primary: Childhood Autism Rating Scale (CARS)

End point title	Childhood Autism Rating Scale (CARS)
-----------------	--------------------------------------

End point description:

The CARS is a tool used to diagnose Autism for children and adolescents, and to measure the intensity of ASD. The scale contains 15 items. The first 14 ones represents different domains of child functioning and the last one is a global rating of Autism. Each item is a 4-point scale from 1, normal functioning to 4, severely disrupted functioning. Results of each item are summed up for a final score between 15 and 60. The CARS classification allows to distinguish several categories: autistic features, mild, moderate and severe autism. A reduction in CARS corresponds to an improvement.

Statistical analyses

Statistical analysis title	Primary analysis
----------------------------	------------------

Statistical analysis description:

The primary analysis of the primary endpoint was an intent-to-treat analysis, performed using the Full Analysis Set (FAS) with imputation of no change when the result for Day 90 was missing, provided the patient received at least one dose of treatment. The treatment groups were compared using the Kruskal-Wallis test with Steel-Dwass adjusted pair-wise comparisons.

Comparison groups	Full Analysis Set (FAS) - Bumetanide low dose v Full Analysis Set (FAS) - Bumetanide medium dose v Full Analysis Set (FAS) - Bumetanide high dose v Full Analysis Set (FAS) - Placebo v Completer's analysis - Bumetanide low dose v Completer's analysis - Bumetanide medium dose v Completer's analysis - Bumetanide high dose v Completer's analysis - Placebo

P-value	= 0.0689
Method	Kruskal-wallis

Statistical analysis title	Change in CARS from Screening to Day 90
-----------------------------------	---

Statistical analysis description:

Full Analysis Set (FAS)

The FAS was defined as all patients who are randomised. The FAS was used for all efficacy analyses..

Change in CARS from Screening to Day 90

If total CARS score was missing at Day 90 the screening score was imputed for Day 90 (Last Observation Carried Forward [LOCF] imputation).

The treatment groups are compared using the Kruskal-Wallis test

The analyses are repeated without the imputation as a completers analysis.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 February 2015	<p>Amendment 01: Open label extension.</p> <p>A 6-month extension study of Bumetanide 0.5 mg/mL solution.</p> <p>The proposed continued use of Bumetanide was for compassionate purposes and was not considered within the development framework of Bumetanide in ASD patients. Participation in the extension phase was on a voluntary basis.</p> <p>Nineteen patients were enrolled in the extension phase.</p> <p>Bumetanide was given at 0.5 or 1 mg BID.</p> <p>The primary objective was to provide Bumetanide to patients who were enrolled in the NeuroClin02 study. The secondary objective was to collect additional safety data. No specific ASD outcomes were included.</p> <p>The extension was conducted in 3 clinical centres in France, 19 patients entered the extension.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Only the drug-related adverse events have been listed in line with the information presented in the Clinical Study Report.

Notes:
