

## Clinical trial results:

### A Single Blind, Randomized, Placebo Controlled, Repeat Dose, Dose Escalating Study Investigating Safety, Tolerability pharmacokinetics, Pharmacodynamics and the Beta-Cell Preserving Effect of Otelixizumab in New-Onset, Autoimmune Type 1 Diabetes Mellitus Patients

#### Summary

EudraCT number	2013-003296-34
Trial protocol	BE
Global end of trial date	27 September 2018

#### Results information

Result version number	v1 (current)
This version publication date	11 April 2019
First version publication date	11 April 2019

#### Trial information

##### Trial identification

Sponsor protocol code	116505
-----------------------	--------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	GlaxoSmithKline
Sponsor organisation address	980 Great West Road, Brentford, Middlesex, United Kingdom,
Public contact	GSK Response Center, GlaxoSmithKline, 1 8664357343, GSKClinicalSupportHD@gsk.com
Scientific contact	GSK Response Center, GlaxoSmithKline, 1 8664357343, GSKClinicalSupportHD@gsk.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

---

Analysis stage	Final
Date of interim/final analysis	08 January 2019
Is this the analysis of the primary completion data?	No

---

Global end of trial reached?	Yes
Global end of trial date	27 September 2018
Was the trial ended prematurely?	No

---

Notes:

---

**General information about the trial**

---

Main objective of the trial:

To assess the effect of a single course of otelixizumab treatment on the acute and long term safety and tolerability of otelixizumab in NOT1DM patients.

Protection of trial subjects:

Not applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	12 March 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

---

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

---

Country: Number of subjects enrolled	Belgium: 30
Worldwide total number of subjects	30
EEA total number of subjects	30

---

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	5
Adults (18-64 years)	25
From 65 to 84 years	0
85 years and over	0

---

## Subject disposition

### Recruitment

Recruitment details:

The study was a multi-centered, single-blind, randomized (rand), placebo-controlled 6 Day repeat dose study to investigate the safety, tolerability, pharmacokinetics, pharmacodynamics, efficacy and immunological profile of intravenously administered Otelixizumab (OTX) in New Onset Type 1 Diabetes Mellitus participants (par.).

### Pre-assignment

Screening details:

A total of 30 par. were enrolled at different centers in Belgium, which was conducted from 12-Mar-2014 to 27-Sep-2018.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Subject

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Participants received 0.9% weight/volume Sodium Chloride solution for injection daily for 6 Days

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants were administered 0.9% weight/volume sodium chloride by intravenous infusion

<b>Arm title</b>	Otelixizumab 9 mg
------------------	-------------------

Arm description:

Participants received 1.5 mg of OTX (intravenous solution for infusion) daily for 6 Days

Arm type	Experimental
Investigational medicinal product name	Otelixizumab 9 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Otelixizumab will be provided as concentrated solution for infusion (5 mg/mL). The study medication will be diluted to 0.1 mg/mL in 0.9% sodium chloride and administered by intravenous infusion using a syringe pump

<b>Arm title</b>	Otelixizumab 18 mg
------------------	--------------------

Arm description:

Participants received 3 mg of OTX (intravenous solution for infusion) daily for 6 Days

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Otelixizumab 18 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Otelixizumab will be provided as concentrated solution for infusion (5 mg/mL). The study medication will be diluted to 0.1 mg/mL in 0.9% sodium chloride and administered by intravenous infusion using a syringe pump

<b>Arm title</b>	Otelixizumab 27 mg
------------------	--------------------

Arm description:

Participants received 4.5 mg of OTX (intravenous solution for infusion) daily for 6 Days

Arm type	Experimental
Investigational medicinal product name	Otelixizumab 27 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Otelixizumab will be provided as concentrated solution for infusion (5 mg/mL). The study medication will be diluted to 0.1 mg/mL in 0.9% sodium chloride and administered by intravenous infusion using a syringe pump

<b>Number of subjects in period 1<sup>[1]</sup></b>	Placebo	Otelixizumab 9 mg	Otelixizumab 18 mg
Started	5	9	8
Completed	4	8	7
Not completed	1	1	1
Consent withdrawn by subject	1	-	-
Adverse event, non-fatal	-	1	-
Lost to follow-up	-	-	1

<b>Number of subjects in period 1<sup>[1]</sup></b>	Otelixizumab 27 mg
Started	7
Completed	7
Not completed	0
Consent withdrawn by subject	-
Adverse event, non-fatal	-
Lost to follow-up	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Overall number of participants were 30 of which only 29 were randomized

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo
Reporting group description:	
Participants received 0.9% weight/volume Sodium Chloride solution for injection daily for 6 Days	
Reporting group title	Otelixizumab 9 mg
Reporting group description:	
Participants received 1.5 mg of OTX (intravenous solution for infusion) daily for 6 Days	
Reporting group title	Otelixizumab 18 mg
Reporting group description:	
Participants received 3 mg of OTX (intravenous solution for infusion) daily for 6 Days	
Reporting group title	Otelixizumab 27 mg
Reporting group description:	
Participants received 4.5 mg of OTX (intravenous solution for infusion) daily for 6 Days	

Reporting group values	Placebo	Otelixizumab 9 mg	Otelixizumab 18 mg
Number of subjects	5	9	8
Age categorical			
Safety Population comprised of participants who received at least one dose of study treatment. 1 participant withdrew after being randomized, prior to receiving any treatment.			
Units: Subjects			
All Participants	5	9	8
Age Continuous			
Safety Population comprised of participants who received at least one dose of study treatment. 1 participant withdrew after being randomized, prior to receiving any treatment.			
Units: Years			
arithmetic mean	24.8	22.4	20.5
standard deviation	± 4.44	± 2.13	± 4.31
Sex: Female, Male			
Safety Population comprised of participants who received at least one dose of study treatment. 1 participant withdrew after being randomized, prior to receiving any treatment.			
Units: Subjects			
Female	2	3	3
Male	3	6	5
Race/Ethnicity, Customized			
Safety Population comprised of participants who received at least one dose of study treatment. 1 participant withdrew after being randomized, prior to receiving any treatment.			
Units: Subjects			
White	5	9	8

Reporting group values	Otelixizumab 27 mg	Total	
Number of subjects	7	29	
Age categorical			
Safety Population comprised of participants who received at least one dose of study treatment. 1 participant withdrew after being randomized, prior to receiving any treatment.			
Units: Subjects			
All Participants	7	29	

Age Continuous			
Safety Population comprised of participants who received at least one dose of study treatment. 1 participant withdrew after being randomized, prior to receiving any treatment.			
Units: Years			
arithmetic mean	22.1		
standard deviation	± 3.98	-	
Sex: Female, Male			
Safety Population comprised of participants who received at least one dose of study treatment. 1 participant withdrew after being randomized, prior to receiving any treatment.			
Units: Subjects			
Female	2	10	
Male	5	19	
Race/Ethnicity, Customized			
Safety Population comprised of participants who received at least one dose of study treatment. 1 participant withdrew after being randomized, prior to receiving any treatment.			
Units: Subjects			
White	7	29	

## End points

### End points reporting groups

Reporting group title	Placebo
Reporting group description:	
Participants received 0.9% weight/volume Sodium Chloride solution for injection daily for 6 Days	
Reporting group title	Otelixizumab 9 mg
Reporting group description:	
Participants received 1.5 mg of OTX (intravenous solution for infusion) daily for 6 Days	
Reporting group title	Otelixizumab 18 mg
Reporting group description:	
Participants received 3 mg of OTX (intravenous solution for infusion) daily for 6 Days	
Reporting group title	Otelixizumab 27 mg
Reporting group description:	
Participants received 4.5 mg of OTX (intravenous solution for infusion) daily for 6 Days	

### Primary: Number of participants with adverse events (AEs) related to cytokine release syndrome (CRS)

End point title	Number of participants with adverse events (AEs) related to cytokine release syndrome (CRS) <sup>[1]</sup>
End point description:	
An AE is any untoward medical occurrence in a participant or clinical investigation participant, temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product. On treatment AEs have been reported. Safety Population comprised of all participants who received at least one dose of study treatment.	
End point type	Primary
End point timeframe:	
Up to Day 14	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There are no statistical analysis to report.

End point values	Placebo	Otelixizumab 9 mg	Otelixizumab 18 mg	Otelixizumab 27 mg

### Secondary: Free serum Otelixizumab concentrations by treatment

End point title	Free serum Otelixizumab concentrations by treatment <sup>[26]</sup>
-----------------	---

End point description:

Blood samples were collected at designated timepoints. Free serum Otelixizumab concentrations were calculated by linear and semi-logarithmic individual serum concentration-time profiles. Fully treated population comprised of all randomized participants who received the full 6 days of treatment based on

actual exposure data. 99999 indicates that data could not be calculated as >30% of samples were below the limit of quantification. Only those participants with data available at the specified data points were analyzed (represented by n=X in the category titles).

End point type	Secondary
----------------	-----------

End point timeframe:

Pre-dose on Day 1,2,3,4,5,6 and 14; 30 minutes, 1 hour, 2 hours, 4 hours, 6 hours, 8 hours, 9 hours, 16 hours post-dose on Day 1, and 1 hour post-dose on Day 6.

Notes:

[26] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: There are no statistical analysis to report.

## Statistical analyses

**Secondary: Change from Baseline in C-Peptide weighted mean (area under curve from 0 to 120 minutes [AUC0-120 minutes]) from mixed meal tolerance test**

End point title	Change from Baseline in C-Peptide weighted mean (area under curve from 0 to 120 minutes [AUC0-120 minutes]) from mixed meal tolerance test
-----------------	--

## End point description:

Blood samples were collected at indicated time points to assess levels of C-peptide. Day -1 was considered as Baseline. Change from Baseline was calculated by subtracting Baseline value from the specified time point value. Mixed meal-stimulated C-peptide AUC was calculated from area under C-peptide/time curve from time 0 to 120 minutes, using trapezoidal rule. ITT treated population comprised of all randomized participants who received at least one dose of study treatment. Only those participants with data available at the specified data points were analyzed (represented by n=X in the category titles).

End point type	Secondary

## Secondary: Time-normalized number of hypoglycemic and hyperglycemic events

End point title	Time-normalized number of hypoglycemic and hyperglycemic events
-----------------	---

**End point description:**

As per American Diabetes Association (ADA), hypoglycemia is defined as blood glucose level  $\leq 70$  milligram/deciliter (mg/dl) and hyperglycemia is defined as blood glucose level  $> 250$  mg/dL. Hypoglycaemic and hyperglycaemic events will be recorded in a diary whenever they occur, along with the start and stop dates. Mean number of events is defined as the average number of events reported per subject. Normalization is expressed by dividing number of events by length of reporting period in month (1 month = 30 days). Only those participants with data available at the specified data points were analyzed (represented by n=X in the category titles).

## Statistical analyses

No statistical analyses for this end point

## Secondary: Relative change from Baseline in percentage (%) in CD8+ cells

End point title	Relative change from Baseline in percentage (%) in CD8+ cells
End point description:	
Whole blood samples were collected and analyzed by flow cytometry. Day1 was considered as Baseline. Change from Baseline was calculated by subtracting Baseline value from the specified time point value. Relative change from baseline (%) was calculated as change from Baseline relative to Baseline in %. 99999 indicates that standard deviation could not be calculated for a single participant. 999999 indicates that data was not collected. Only those participants with data available at the specified data points were analyzed (represented by n=X in the category titles).

## Statistical analyses

No statistical analyses for this end point

### Secondary: Change from Baseline in bound CD3 copies on CD8+ cells

End point title	Change from Baseline in bound CD3 copies on CD8+ cells
-----------------	--

End point description:

Whole blood samples were drawn and analyzed by flow cytometry. Day 1 was considered as Baseline. Change from Baseline was calculated by subtracting Baseline value from the specified time point value. 99999 indicates that standard deviation could not be calculated for a single participant. 999999 indicates that data was not collected. Only those participants with data available at the specified data points were analyzed (represented by n=X in the category titles).

End point type	Secondary

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

On treatment serious adverse events (SAEs) and non-serious AEs were collected from the start of study treatment up to 36 months.

Adverse event reporting additional description:

Safety population was used. Safety population comprised of all participants who received at least one dose of a study treatment.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	21.1
--------------------	------

### Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Participants received 0.9% weight/volume Sodium Chloride solution for injection daily for 6 Days

Reporting group title	Otelixizumab 9 mg
-----------------------	-------------------

Reporting group description:

Participants received 1.5 mg of OTX (intravenous solution for infusion) daily for 6 Days

Reporting group title	Otelixizumab 18 mg
-----------------------	--------------------

Reporting group description:

Participants received 3 mg of OTX (intravenous solution for infusion) daily for 6 Days

Reporting group title	Otelixizumab 27 mg
-----------------------	--------------------

Reporting group description:

Participants received 4.5 mg of OTX (intravenous solution for infusion) daily for 6 Days

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 February 2014	Amend_01: Addition of unblinded Pharmacy Monitor to table summarising blinding status of personnel; endpoint in table updated to include insulin measurement for 7 days before all outpatient visits; endpoint of glucose added when performing Mixed Meal Tolerance test and clamp procedures; clarification of time period for collecting information in the screening period; removal of T Cell Receptor complexes and clarification of CD3 requirements throughout protocol; change of volume required to purge the Intravenous infusion line and total volume filled into syringe, and removal of "micopore" from description; the following changes to the Time and Events Tables: clarification that insulin should be recorded for 7 days before all outpatient visits; addition of Day 6 to footnote; clarification that glucose will be collected in addition to C-peptide during the hyperglycaemic clamp procedure; addition of Electrocardiograms at 6 hours post start of infusion clarification of which Electrocardiograms will be triplicate or single measures; addition of T Cell Receptor deep sequencing at 24 months to Biomarker Assay Table; clarification that Mixed Meal Tolerance test will be at least 7 days prior to the first dose of study drug; clarification that c-peptide and glucose samples will be shipped within 3 weeks of collection; clarification that the hyperglycaemic range of 180-240 milligram per deciliter during 140 minutes for consistency with blood sampling time points.
02 April 2014	Amend_02: Hyperglycaemic events is included in the follow up endpoints and the Time and Events table to be consistent with the applicable secondary objective; rephrased "Immuno-Assay for syphilis test" in order to allow for different types of tests; increased the overage volume required to remain in the syringe for infusion; clarified the start of Adverse Events recording.
18 June 2014	Amend_03: The third medical monitor has changed, therefore contact information for the replacement is included. The eligibility inclusion criterion was changed from two to one positive autoantibody associated with Type 1 Diabetes Mellitus
28 July 2014	Amend_3.1: Clarified that within each cohort administration of study treatment for the first three patients will be staggered by at least three days across each centre.
11 February 2015	Amend_04: To increase flexibility for patients, dosing on Day 4, 5 & 6 may be performed on an out-patient basis if the Investigator is satisfied with the clinical status of the patient; clarification that if the infusion needs to be reduced or temporarily stopped the Investigator should first consult with the Medical Monitor who will consult the Sponsor, unless there is an immediate safety hazard, in this case the Investigator can inform the Medical Monitor afterwards; clarified that insulin use is to be recorded prior to each visit and phone call; clarification that the decision to replace a patient is to be based on the reason for withdrawal; inclusion criteria amended; screen failure data are to be collected; assessments following patient withdrawal clarified; clarified that infusion kits are supplied to sites; assessment of Epstein Barr Virus reactivation now conducted at 6 weeks after the first active dose; blinding status amended to clarify that only the patient is blinded and not site staff; requirement for pharmacy staff to document that investigational product shipping conditions were 2-8°C included; anti-emetic added as a permitted concomitant medication, window of $\pm 1$ day added to Day 14, 21 visits & Week 4 telephone call; Dosing and Follow-up amended to include a phone call at Week 4 to discuss Adverse Events (AEs) with patient and addition of assessments at Week 6; endpoints amended to reflect the change to visits at Week 4 and Week 6; Detail for Vitals, Electrocardiogram and Pharmacokinetic and Pharmacodynamic Monitoring over the Infusion Period amended to include Electrocardiogram at 3 hours and to clarify that assessments may stop at 3 hours post dose; clarification of cytokine release syndrome adverse events grading system and stopping criteria in Section; Cytokine Release Syndrome (CRS) AEs; clarification on requirements for bilirubin samples included

18 August 2015	Amend_05: The assay for screening Epstein Barr Virus ImmunoglobulinG and ImmunoglobulinM assessment was clarified in exclusion criterion and in the Risk Management section; exclusion criterion was split into two exclusion criterias to clarify Epstein Barr Virus ImmunoglobulinM, ImmunoglobulinG and Viral load requirements for the interpretation of the results: a footnote was added to Table; Stopping Criteria for Cytokine Release Syndrome-Adverse Events to provide further clarification regarding when individual stopping criteria are met; the dose preparation section was updated to clarify that an additional maximum of 30 minutes is allowed for dose preparation tasks and that if 6 hours is exceeded, the syringe and infusion materials must be replaced; Epstein Barr Virus serology samples to assess ImmunoglobulinG and ImmunoglobulinM included for Day -1 in the Time and Events Table; Dosing and Follow-Up.
12 September 2016	Amend_06: Clarifications were made to the exploratory biomarker objectives and endpoints. Significant changes were: the addition of Th17 cells to the objective to assess the effect of orelizumab on circulating lymphocytes; the addition of viral antigens to the endpoints to assess the effect of orelizumab on the frequency of cytokine-producing antigen specific T cells; the addition of transcriptomic gene expression changes to the objective to assess the effect of orelizumab on the clonal repertoire of circulating T cell populations; and clarification that the suppression activity of circulating T lymphocytes may be further evaluated by adapting assay conditions, possibly through adding and/or blocking of stimuli. The Time and Events table was updated to show requirement for telephone calls at Month 36, 48 and 60. Month 24 exploratory biomarkers are now being routinely collected and are not subject to the results of Month 12 biomarker analysis. In addition, it was clarified that Month 24 exploratory biomarker samples will be collected and only analysed after review of safety endpoints from Month 12 and not efficacy endpoints as previously stated. Minor clarifications related to the Month 12 Interim Analyses were included.
11 September 2017	Amend_07: All details of how the currently used Ensure powder (Abbott) is prepared has been removed from the Mixed Meal Tolerance Test. This has been amended because the manufacturer (Abbott) has discontinued the currently used powder and the new product has a slightly different formulation.
26 October 2017	Amend_08: Data which emerged from an interim analysis carried out in this study showed a prompt regain of immune competence observed in treated subjects and consequent rapid resolution of Epstein Barr Virus reactivation, both clinically and virologically. The long term EBV related Post-Transplant Lymphoproliferative Disorder risk, as observed in solid organ transplant on a chronic immune suppression therapy, is negligible. Therefore, all references to month 48 and 60 have been removed as no patient currently enrolled in the study has reached month 48 of follow up. For the patients who have yet to complete their 24 month visit, this visit will be treated as a final visit and for those who have gone past month 24, they will be followed up with a final communication or visit (final follow up) upon approval of this protocol amendment. Data from the literature identified a causal relationship between the degree of immunosuppression and an increased incidence of Epstein Barr Virus related Post Transplant Lymphoproliferative Disorders and for this reason a long-term follow-up was implemented at the start of the study.

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

None reported
