Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 May 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	27 April 2016
Global end of trial reached?	Yes
Global end of trial date	17 May 2016
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate overall response rate (ORR) following treatment with idelalisib plus rituximab in participants with previously untreated chronic lymphocytic leukemia (CLL) with 17p deletion.

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance with regulatory requirements.

This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 August 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 15
Country: Number of subjects enrolled	Portugal: 2
Country: Number of subjects enrolled	Romania: 4
Country: Number of subjects enrolled	Spain: 7
Country: Number of subjects enrolled	United Kingdom: 11
Country: Number of subjects enrolled	Austria: 3
Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Czech Republic: 9
Country: Number of subjects enrolled	Denmark: 1
Country: Number of subjects enrolled	France: 7
Country: Number of subjects enrolled	Hungary: 2
Country: Number of subjects enrolled	Italy: 14
Country: Number of subjects enrolled	United States: 19
Country: Number of subjects enrolled	Australia: 6

Worldwide total number of subjects	102
EEA total number of subjects	77

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	41
From 65 to 84 years	58
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at study sites in Australia, Europe, and the United States. The first participant was screened on 06 August 2014. The last study visit occurred on 17 May 2016.

Pre-assignment

Screening details:

130 participants were screened.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Idelalisib + Rituximab
------------------	------------------------

Arm description:

Idelalisib continuously throughout the study (up to 10 years) + rituximab for 8 weeks

Arm type	Experimental
Investigational medicinal product name	Idelalisib
Investigational medicinal product code	
Other name	Zydelig®, GS-1101, CAL-101
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

150 mg administered twice daily

Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	Rituxan, Mabthera
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

375 mg/m² once weekly

Number of subjects in period 1	Idelalisib + Rituximab
Started	102
Completed	9
Not completed	93
Withdrew Consent	3
Initiation of Anti-Neoplastic Therapy	2
Investigator's Discretion	10
Study Terminated by Sponsor	77
Lost to follow-up	1

Baseline characteristics

End points

End points reporting groups

Reporting group title	Idelalisib + Rituximab
Reporting group description:	
Idelalisib continuously throughout the study (up to 10 years) + rituximab for 8 weeks	

Primary: Overall Response Rate

End point title	Overall Response Rate ^[1]
End point description:	
Overall response rate (ORR) was defined as the proportion of participants who achieve a confirmed complete or partial response. ORR was to be assessed by an independent review committee (IRC). Due to the early termination of the study, efficacy data were not available for all participants, and therefore the prespecified analyses were not conducted.	
End point type	Primary
End point timeframe:	
Not applicable	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Due to the early termination of the study, efficacy data were not available for all participants, and therefore the prespecified analyses were not conducted.

End point values	Idelalisib + Rituximab			
Subject group type	Reporting group			
Number of subjects analysed	0 ^[2]			
Units: Not applicable				

Notes:

[2] - Analysis was not performed due to early study termination.

Statistical analyses

No statistical analyses for this end point

Secondary: Duration of Response

End point title	Duration of Response
End point description:	
Duration of response (DOR) was defined as the interval from the first documentation of confirmed complete response or partial response (by IRC) to the first documentation of definitive disease progression or death from any cause. Definitive disease progression is CLL progression based on standard criteria, excluding lymphocytosis alone. Due to the early termination of the study, efficacy data were not available for all participants, and therefore the prespecified analyses were not conducted.	
End point type	Secondary
End point timeframe:	
Not applicable	

End point values	Idelalisib + Rituximab			
Subject group type	Reporting group			
Number of subjects analysed	0 ^[3]			
Units: Not applicable				

Notes:

[3] - Analysis was not performed due to early study termination.

Statistical analyses

No statistical analyses for this end point

Secondary: Nodal Response Rate

End point title	Nodal Response Rate
End point description:	
Nodal response rate was defined as the proportion of participants who achieve a 50% decrease from baseline in the sum of the products of the greatest perpendicular diameters of index lesions. Nodal response rate was to be assessed by an IRC. Due to the early termination of the study, efficacy data were not available for all participants, and therefore the prespecified analyses were not conducted.	
End point type	Secondary
End point timeframe:	
Not applicable	

End point values	Idelalisib + Rituximab			
Subject group type	Reporting group			
Number of subjects analysed	0 ^[4]			
Units: Not applicable				

Notes:

[4] - Analysis was not performed due to early study termination.

Statistical analyses

No statistical analyses for this end point

Secondary: Complete Response Rate

End point title	Complete Response Rate
End point description:	
Complete response rate was defined as the proportion of participants who achieve a confirmed complete response. Complete response rate was to be assessed by an IRC. Due to the early termination of the study, efficacy data were not available for all participants, and therefore the prespecified analyses were not conducted.	
End point type	Secondary
End point timeframe:	
Not applicable	

End point values	Idelalisib + Rituximab			
Subject group type	Reporting group			
Number of subjects analysed	0 ^[5]			
Units: Not applicable				

Notes:

[5] - Analysis was not performed due to early study termination.

Statistical analyses

No statistical analyses for this end point

Secondary: Progression-Free Survival

End point title	Progression-Free Survival
End point description:	
Progression-free survival (PFS) was defined as the interval from first dose of study drug to the first documentation of definitive disease progression or death from any cause. Definitive disease progression is CLL progression based on standard criteria, excluding lymphocytosis alone. PFS was to be assessed by an IRC. Due to the early termination of the study, efficacy data were not available for all participants, and therefore the prespecified analyses were not conducted.	
End point type	Secondary
End point timeframe:	
Not applicable	

End point values	Idelalisib + Rituximab			
Subject group type	Reporting group			
Number of subjects analysed	0 ^[6]			
Units: Not applicable				

Notes:

[6] - Analysis was not performed due to early study termination.

Statistical analyses

No statistical analyses for this end point

Secondary: Overall Survival

End point title	Overall Survival
End point description:	
Overall survival was defined as the interval from the start of study treatment to death from any cause. Due to the early termination of the study, efficacy data were not mature for all participants, and therefore the prespecified analyses were not conducted.	
End point type	Secondary
End point timeframe:	
Not applicable	

End point values	Idelalisib + Rituximab			
Subject group type	Reporting group			
Number of subjects analysed	0 ^[7]			
Units: Not applicable				

Notes:

[7] - Analysis was not performed due to early study termination.

Statistical analyses

No statistical analyses for this end point

Secondary: Minimal Residual Disease Negativity Rate at Week 36

End point title	Minimal Residual Disease Negativity Rate at Week 36
-----------------	---

End point description:

Minimal residual disease (MRD) negativity rate was defined as the proportion of participants with MRD < 10⁻⁴ assessed by flow cytometry in bone marrow at Week 36 after therapy initiation. For participants receiving the final dose of rituximab after the original scheduled date, the MRD assessment will be performed no fewer than 12 weeks after the last dose of rituximab. Due to the early termination of the study, efficacy data were not available for all participants, and therefore the prespecified analyses were not conducted.

End point type	Secondary

Nasopharyngitis			
subjects affected / exposed	10 / 102 (9.80%)		
occurrences (all)	12		
Oral candidiasis			
subjects affected / exposed	6 / 102 (5.88%)		
occurrences (all)	6		
Respiratory tract infection			
subjects affected / exposed	6 / 102 (5.88%)		
occurrences (all)	6		
Upper respiratory tract infection			

subjects affected / exposed occurrences (all)	7 / 102 (6.86%) 8		
Metabolism and nutrition disorders			
Decreased appetite			
subjects affected / exposed occurrences (all)	9 / 102 (8.82%) 10		
Hypokalaemia			
subjects affected / exposed occurrences (all)	10 / 102 (9.80%) 12		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 May 2014	Revisions made to address VHP concerns with the GS-US-312-0123 protocol and to align with global changes made to all protocols in the idelalisib (IDELA) frontline CLL program.
07 November 2014	The protocol was revised primarily to align with IDELA Investigator's Brochure (IB) Edition 11 and to align with global changes made to all protocols in the idelalisib (IDELA) frontline CLL program.
25 November 2014	The protocol was revised primarily to update the creatinine clearance value required prior to entry into the study. This change is being made to correct an error in Amendment 2, where the value was incorrectly changed. The criteria of ≥ 30 mL/min should not have changed from Amendment 1.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
11 March 2016	An increased rate of deaths and serious adverse events (SAEs) among participants with front-line CLL and early-line iNHL treated with idelalisib in combination with standard therapies was observed by the independent data monitoring committee (DMC) during regular review of 3 Gilead Phase 3 studies. Gilead reviewed the unblinded data and terminated those studies in agreement with the DMC recommendation and in consultation with the US Food and Drug Administration (FDA). All front-line studies of idelalisib, including this study, were also terminated.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to the early termination of the study, efficacy data were not available for all participants, and therefore the prespecified analyses were not conducted.

Notes:
