

## Clinical trial results:

### A PHASE II, MULTICENTER, SINGLE-ARM STUDY OF ATEZOLIZUMAB IN PATIENTS WITH PD L1-POSITIVE LOCALLY ADVANCED OR METASTATIC NON-SMALL CELL LUNG CANCER

#### Summary

EudraCT number	2013-003330-32
Trial protocol	SI IT BE DE GB NL FR ES BG
Global end of trial date	

#### Results information

Result version number	v1
This version publication date	20 November 2018
First version publication date	01 July 2016

#### Trial information

##### Trial identification

Sponsor protocol code	GO28754
-----------------------	---------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02031458
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	F. Hoffmann-La Roche AG
Sponsor organisation address	Grenzacherstrasse 124, Basel, Switzerland, CH-4070
Public contact	F. Hoffmann-La Roche AG, Roche Trial Information Hotline, +41 61 6878333, global.trial_information@roche.com
Scientific contact	F. Hoffmann-La Roche AG, Roche Trial Information Hotline, +41 61 6878333, global.trial_information@roche.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	28 May 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	28 May 2015
Global end of trial reached?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective for this study is to evaluate the efficacy of atezolizumab in participants with programmed cell death-1 ligand 1 (PD-L1)-positive locally advanced or metastatic non-small cell lung cancer (NSCLC), as measured by:

- Independent review facility (IRF)-assessed objective response rate (ORR) according to Response Evaluation Criteria in Solid Tumors (RECIST) version 1.1 (v1.1)

Protection of trial subjects:

The study was conducted in accordance with the principles of the "Declaration of Helsinki" and Good Clinical Practice.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 January 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 21
Country: Number of subjects enrolled	Hong Kong: 6
Country: Number of subjects enrolled	Japan: 27
Country: Number of subjects enrolled	Singapore: 18
Country: Number of subjects enrolled	Bosnia and Herzegovina: 8
Country: Number of subjects enrolled	Switzerland: 41
Country: Number of subjects enrolled	Georgia: 20
Country: Number of subjects enrolled	Turkey: 18
Country: Number of subjects enrolled	Canada: 47
Country: Number of subjects enrolled	United States: 217
Country: Number of subjects enrolled	Netherlands: 28
Country: Number of subjects enrolled	Slovenia: 8
Country: Number of subjects enrolled	Spain: 48
Country: Number of subjects enrolled	United Kingdom: 11
Country: Number of subjects enrolled	Belgium: 20
Country: Number of subjects enrolled	Bulgaria: 4
Country: Number of subjects enrolled	France: 64
Country: Number of subjects enrolled	Germany: 29
Country: Number of subjects enrolled	Italy: 24

Worldwide total number of subjects	659
EEA total number of subjects	236

Notes:

---

### Subjects enrolled per age group

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	331
From 65 to 84 years	323
85 years and over	5

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Screening was performed from Day -28 to Day -1.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Cohort 1: First Line Atezolizumab

Arm description:

Participants received 1200 milligrams (mg) atezolizumab every 3 weeks (Day 1 of 21 day cycle) administered by intravenous (IV) infusion until intolerable toxicity, disease progression or death. Participants in this cohort received no prior chemotherapy in locally advanced or metastatic setting.

Arm type	Experimental
Investigational medicinal product name	Atezolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

1200 mg every 3 weeks

<b>Arm title</b>	Cohort 2: Second Line Atezolizumab
------------------	------------------------------------

Arm description:

Participants received 1200 mg atezolizumab every 3 weeks (Day 1 of 21-day cycle) administered by IV infusion until intolerable toxicity, disease progression or death. Participants were permitted to continue treatment after progressive disease, if the following criteria were met: evidence of clinical benefit as assessed by the investigator; absence of symptoms and signs indicating unequivocal progression of disease; no decline in Eastern Cooperative Oncology Group (ECOG) performance status; absence of tumor growth at critical anatomical sites that cannot be managed by protocol-allowed medical interventions; evidence of clinical benefit as assessed by the investigator. Participants in this cohort progressed during or after prior platinum-based chemotherapy in locally advanced or metastatic setting.

Arm type	Experimental
Investigational medicinal product name	Atezolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

1200 mg every 3 weeks

<b>Arm title</b>	Cohort 3: Third Line and Beyond Atezolizumab
------------------	--

Arm description:

Participants received 1200 mg atezolizumab every 3 weeks ( Day 1 of 21-day cycle) administered by IV infusion until intolerable toxicity, disease progression or death. Participants were permitted to continue treatment after progressive disease, if the following criteria were met: absence of symptoms and signs

indicating unequivocal progression of disease; no decline in ECOG performance status; absence of tumor growth at critical anatomical sites that cannot be managed by protocol-allowed medical interventions; evidence of clinical benefit as assessed by the investigator. Participants in this cohort progressed during or after prior platinum-based chemotherapy and at least one additional therapy in locally advanced or metastatic setting.

Arm type	Experimental
Investigational medicinal product name	Atezolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

1200 mg every 3 weeks

Number of subjects in period 1	Cohort 1: First Line Atezolizumab	Cohort 2: Second Line Atezolizumab	Cohort 3: Third Line and Beyond Atezolizumab
Started	139	267	253
Completed	0	0	0
Not completed	139	267	253
On treatment	43	81	73
Consent withdrawn by subject	6	9	3
Physician decision	-	1	-
On survival follow-up	46	83	73
Death	36	87	100
Unknown reason	-	1	2
Lost to follow-up	1	1	2
Protocol deviation	7	4	-

## Baseline characteristics

### Reporting groups

Reporting group title	Cohort 1: First Line Atezolizumab
-----------------------	-----------------------------------

Reporting group description:

Participants received 1200 milligrams (mg) atezolizumab every 3 weeks (Day 1 of 21 day cycle) administered by intravenous (IV) infusion until intolerable toxicity, disease progression or death. Participants in this cohort received no prior chemotherapy in locally advanced or metastatic setting.

Reporting group title	Cohort 2: Second Line Atezolizumab
-----------------------	------------------------------------

Reporting group description:

Participants received 1200 mg atezolizumab every 3 weeks (Day 1 of 21-day cycle) administered by IV infusion until intolerable toxicity, disease progression or death. Participants were permitted to continue treatment after progressive disease, if the following criteria were met: evidence of clinical benefit as assessed by the investigator; absence of symptoms and signs indicating unequivocal progression of disease; no decline in Eastern Cooperative Oncology Group (ECOG) performance status; absence of tumor growth at critical anatomical sites that cannot be managed by protocol-allowed medical interventions; evidence of clinical benefit as assessed by the investigator. Participants in this cohort progressed during or after prior platinum-based chemotherapy in locally advanced or metastatic setting.

Reporting group title	Cohort 3: Third Line and Beyond Atezolizumab
-----------------------	--

Reporting group description:

Participants received 1200 mg atezolizumab every 3 weeks ( Day 1 of 21-day cycle) administered by IV infusion until intolerable toxicity, disease progression or death. Participants were permitted to continue treatment after progressive disease, if the following criteria were met: absence of symptoms and signs indicating unequivocal progression of disease; no decline in ECOG performance status; absence of tumor growth at critical anatomical sites that cannot be managed by protocol-allowed medical interventions; evidence of clinical benefit as assessed by the investigator. Participants in this cohort progressed during or after prior platinum-based chemotherapy and at least one additional therapy in locally advanced or metastatic setting.

Reporting group values	Cohort 1: First Line Atezolizumab	Cohort 2: Second Line Atezolizumab	Cohort 3: Third Line and Beyond Atezolizumab
Number of subjects	139	267	253
Age categorical Units: Subjects			

Age continuous Units: years arithmetic mean standard deviation	66.7 ± 10.4	62.4 ± 10.2	63.6 ± 9.3
Gender categorical Units: Subjects			
Female	68	103	100
Male	71	164	153

Reporting group values	Total		
Number of subjects	659		
Age categorical Units: Subjects			

Age continuous Units: years arithmetic mean standard deviation	-		
Gender categorical Units: Subjects			
Female	271		
Male	388		

## End points

### End points reporting groups

Reporting group title	Cohort 1: First Line Atezolizumab
-----------------------	-----------------------------------

#### Reporting group description:

Participants received 1200 milligrams (mg) atezolizumab every 3 weeks (Day 1 of 21 day cycle) administered by intravenous (IV) infusion until intolerable toxicity, disease progression or death. Participants in this cohort received no prior chemotherapy in locally advanced or metastatic setting.

Reporting group title	Cohort 2: Second Line Atezolizumab
-----------------------	------------------------------------

#### Reporting group description:

Participants received 1200 mg atezolizumab every 3 weeks (Day 1 of 21-day cycle) administered by IV infusion until intolerable toxicity, disease progression or death. Participants were permitted to continue treatment after progressive disease, if the following criteria were met: evidence of clinical benefit as assessed by the investigator; absence of symptoms and signs indicating unequivocal progression of disease; no decline in Eastern Cooperative Oncology Group (ECOG) performance status; absence of tumor growth at critical anatomical sites that cannot be managed by protocol-allowed medical interventions; evidence of clinical benefit as assessed by the investigator. Participants in this cohort progressed during or after prior platinum-based chemotherapy in locally advanced or metastatic setting.

Reporting group title	Cohort 3: Third Line and Beyond Atezolizumab
-----------------------	--

#### Reporting group description:

Participants received 1200 mg atezolizumab every 3 weeks (Day 1 of 21-day cycle) administered by IV infusion until intolerable toxicity, disease progression or death. Participants were permitted to continue treatment after progressive disease, if the following criteria were met: absence of symptoms and signs indicating unequivocal progression of disease; no decline in ECOG performance status; absence of tumor growth at critical anatomical sites that cannot be managed by protocol-allowed medical interventions; evidence of clinical benefit as assessed by the investigator. Participants in this cohort progressed during or after prior platinum-based chemotherapy and at least one additional therapy in locally advanced or metastatic setting.

Subject analysis set title	Cohorts 2 + 3
----------------------------	---------------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

#### Subject analysis set description:

This sub-group included participants from cohorts 2 and 3.

Subject analysis set title	Pharmacokinetic Evaluable Population
----------------------------	--------------------------------------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

#### Subject analysis set description:

All participants who were treated and had evaluable pharmacokinetic samples were included in this group.

### Primary: Percentage of Participants Achieving Objective Response (ORR) Per RECIST v1.1 as Assessed by IRF

End point title	Percentage of Participants Achieving Objective Response (ORR) Per RECIST v1.1 as Assessed by IRF <sup>[1]</sup>
-----------------	---

#### End point description:

ORR was the percentage of participants whose confirmed best overall response was either a Partial Response (PR) or a Complete Response (CR) based upon the IRF assessment per RECIST v1.1. CR: disappearance of all target and non-target lesions. Any pathological lymph nodes (target or non-target) must have reduction in short axis to less than (<) 10 millimeters (mm); PR: greater than (>) or equal to (=) 30 percent (%) decrease from baseline in sum of diameters of target lesions, non-PD non-target lesions and no new lesions. Results were reported by line of therapy and PD-L1 Expression Subgroup (tumor cell [TC]3 [TC3] or tumor-infiltrating immune cell [IC] 3 [IC3], TC3 or IC2/3, TC2/3 or IC2/3). Analyses of objective response rate was performed on efficacy evaluable population which included all treated participants who received any dose of atezolizumab during study treatment period. Number (n) equals (=) number of participants analyzed within the specified group

End point type	Primary
----------------	---------

#### End point timeframe:

Screening, Every 6 weeks ( $\pm$  3 days) for 12 months following Cycle 1, Day 1 and every 9 weeks ( $\pm$  1

week) thereafter until disease progression, intolerable toxicity or death until data cut-off on 28 May 2015 (Up to 16 months)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analyses are attached as a chart.

-----------------	--

End point description:

PFS is the interval between the first dose of atezolizumab and date of disease progression or death due to any cause, whichever occurred first as measured by RECIST v1.1. Progressive Disease (PD) is defined as one or more of the following: at least 20% increase from nadir in the sum of diameters of target lesions (with an absolute increase of at least 5mm), appearance of new lesions, and/or unequivocal progression of non-target lesions. PFS was assessed by Kaplan-Meier estimates. The analyses of PFS was performed on the efficacy evaluable population; n = number of participants analyzed within the specified group.

End point type	Secondary
----------------	-----------

End point timeframe:

Screening, Every 6 weeks ( $\pm$  3 days) for 12 months following Cycle 1, Day 1 and every 9 weeks ( $\pm$  1 week) thereafter until disease progression, intolerable toxicity or death until data cut-off on 28 May 2015 (Up to 16 months)

## Statistical analyses

No statistical analyses for this end point

---

**Secondary: Percentage of Participants with Event (Disease Progression or Death) as Assessed by INV Per Modified RECIST v1.1**

---

End point title	Percentage of Participants with Event (Disease Progression or Death) as Assessed by INV Per Modified RECIST v1.1
-----------------	--

End point description:

PD was defined as at least 20% increase from nadir in the sum of diameters of new and/or existing target lesions (with an absolute increase of at least 5mm). The analyses was performed on the efficacy evaluable population; n = number of participants analyzed within the specified group.

End point type	Secondary
----------------	-----------

End point timeframe:

Screening, Every 6 weeks ( $\pm$  3 days) for 12 months following Cycle 1, Day 1 and every 9 weeks ( $\pm$  1 week) thereafter until disease progression, intolerable toxicity or death until data cut-off on 28 May 2015 (Up to 16 months)

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse events were recorded from the date of Screening until 30 days after the final follow-up visit until data cut-off on 28 May 2015 (Up to 16 months)

Assessment type	Non-systematic
-----------------	----------------

### Dictionary used

Dictionary name	MedDRA

### Reporting groups

Reporting group title	Cohort 1: First Line Atezolizumab
-----------------------	-----------------------------------

Reporting group description:

Participants received 1200 mg atezolizumab every 3 weeks (Day 1 of 21 day cycle) administered by IV infusion until intolerable toxicity, disease progression or death. Participants in this cohort received no prior chemotherapy in locally advanced or metastatic setting.

Reporting group title	Cohort 2: Second Line Atezolizumab
-----------------------	------------------------------------

Reporting group description:

Participants received 1200 mg atezolizumab every 3 weeks (Day 1 of 21-day cycle) administered by IV infusion until intolerable toxicity, disease progression or death. Participants were permitted to continue treatment after progressive disease, if the following criteria were met: evidence of clinical benefit as assessed by the investigator; absence of symptoms and signs indicating unequivocal progression of disease; no decline in ECOG performance status; absence of tumor growth at critical anatomical sites that cannot be managed by protocol-allowed medical interventions; evidence of clinical benefit as assessed by the investigator. Participants in this cohort progressed during or after prior platinum-based chemotherapy in locally advanced or metastatic setting.

Reporting group title	Cohort 3: Third Line and Beyond Atezolizumab
-----------------------	--

Reporting group description:

Participants received 1200 mg atezolizumab every 3 weeks ( Day 1 of 21-day cycle) administered by IV infusion until intolerable toxicity, disease progression or death. Participants were permitted to continue treatment after progressive disease, if the following criteria were met: absence of symptoms and signs indicating unequivocal progression of disease; no decline in ECOG performance status; absence of tumor growth at critical anatomical sites that cannot be managed by protocol-allowed medical interventions; evidence of clinical benefit as assessed by the investigator. Participants in this cohort progressed during or after prior platinum-based chemotherapy and at least one additional therapy in locally advanced or metastatic setting.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 January 2014	The protocol was amended in response to the Voluntary Harmonisation Procedure (VHP), and the major clarifications were as follows: The description of eligible participants with locally advanced and metastatic non-small cell lung cancer in Cohort 1 in the inclusion criteria was further clarified. The exclusion criterion for participants with a positive Human Immunodeficiency Virus (HIV) test was updated. The timing of vital signs with the intravenous infusion of atezolizumab was clarified and made consistent throughout the protocol.
30 May 2014	Phase Ia study PCD4989g clinical data were updated. Inclusion criteria permitted participants with EGFR sensitizing mutations and anaplastic lymphoma kinase (ALK) translocations to be eligible for Cohort 1 after appropriate treatment and subsequent progression on an EGFR tyrosine kinase inhibitor or ALK inhibitor, respectively. Inclusion criteria regarding adequate hematologic and end organ function were revised as follows: the upper limit of 15,000 $\mu$ L was removed from the white blood cell (WBC) count and creatinine clearance allowance was modified from greater than and equal to ( $\geq$ ) 50 to $\geq$ 30 milliliters per minute (mL/min). Treatment duration was modified to allow participants to be as long as they are experiencing clinical benefit; accordingly the 1-year initial treatment period, follow-up, and re-treatment periods no longer applied. The frequency of tumor assessments after 1 year of study treatment was increased from every 12 weeks to every 9 weeks. The total number of participants required for the study was increased from 300 to 635 to ensure a robust data set that allows for reliable evaluation of efficacy and safety, and to reflect the revision on the definition of positivity for PD-L1. In addition, the number of participants in each cohort was adjusted to reflect the new total number. The definition of positivity for PD-L1 was revised in Appendix 10 of the protocol to reflect the implementation introduced in the laboratory manual. The number of participants needed for Cohort 3 was clarified to require at least 75 participants with PD-L1 IHC 3. The plan to manage safety concerns was provided to reflect changes in the general guidelines. The Medical Monitor was changed.
23 December 2014	The Phase Ia Study PCD4989g clinical data were updated in the background section of the protocol. The description of eligible participants with positive PD-L1 was further clarified. The number of participants needed for Cohort 3 was updated to require approximately 100 participants with PD-L1 expression defined as TC3 or IC3 to support the primary efficacy analysis. The primary efficacy endpoint of ORR was revised to be analyzed by IRF assessment per RECIST v1.1. The INV-assessed ORR per modified RECIST would be analyzed as a secondary efficacy endpoint. The statistical plan was modified to reflect changes in the primary efficacy endpoint and the emerging information on subpopulations. The plan to manage safety concerns was revised to reflect changes in the general guidelines.
29 October 2015	The name of the test product, MPDL3280A, was changed to atezolizumab throughout the document. Additional/updated background information regarding previous and ongoing atezolizumab clinical studies was provided to align with Version 7 of the atezolizumab Investigator's Brochure (IB). The management of gastrointestinal, dermatologic, endocrine, pulmonary toxicity, hepatotoxicity, potential pancreatic or eye toxicity, and other immunemediated adverse events has been deleted from this protocol and reference was made to the atezolizumab IB. Systemic immune activation (SIA) has been identified as a potential risk of atezolizumab when given in combination with other immunomodulating agents. The management recommendations regarding early identification and management of SIA have been added. Clarifications have been made to the instructions for recording diagnosis versus signs and symptoms on the Adverse Event electronic case report form (eCRF).

---

Notes:

---

### **Interruptions (globally)**

Were there any global interruptions to the trial? No

### **Limitations and caveats**

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The data was up to primary completion date.
---

Notes:
