General information about the trial

Main objective of the trial:

The primary objective for this study is to evaluate the efficacy of atezolizumab in participants with programmed cell death-1 ligand 1 (PD-L1)-positive locally advanced or metastatic non-small cell lung cancer (NSCLC), as measured by: Independent review facility (IRF)-assessed objective response rate (ORR) according to Response Evaluation Criteria in Solid Tumors (RECIST) version 1.1 (v1.1) .

Protection of trial subjects:

All study subjects were required to read and sign and Informed Consent Form. The study was conducted in accordance with the principles of the "Declaration of Helsinki" and Good Clinical Practice.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 January 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Recruitment

Recruitment details:

Since the primary cut-off date May 8, 2015 one participant in Cohort 1 has moved to Cohort 2 and one participant in Cohort 3 was moved to Cohort 2.

Pre-assignment

Screening details:

Screening was performed from Day -28 to Day -1.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1: First Line Atezolizumab

Arm description:

Participants received 1200 milligrams (mg) atezolizumab every 3 weeks (Day 1 of 21 day cycle) administered by intravenous (IV) infusion until intolerable toxicity, disease progression or death. Participants in this cohort received no prior chemotherapy in locally advanced or metastatic setting.

Arm type	Experimental
Investigational medicinal product name	Atezolizumab
Investigational medicinal product code	
Other name	Tecentriq
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

1200 mg every 3 weeks

Arm title	Cohort 2: Second Line Atezolizumab
------------------	------------------------------------

Arm description:

Participants received 1200 mg atezolizumab every 3 weeks (Day 1 of 21-day cycle) administered by IV infusion until intolerable toxicity, disease progression or death. Participants were permitted to continue treatment after progressive disease, if the following criteria were met: evidence of clinical benefit as assessed by the investigator; absence of symptoms and signs indicating unequivocal progression of disease; no decline in Eastern Cooperative Oncology Group (ECOG) performance status; absence of tumor growth at critical anatomical sites that cannot be managed by protocol-allowed medical interventions; evidence of clinical benefit as assessed by the investigator. Participants in this cohort progressed during or after prior platinum-based chemotherapy in locally advanced or metastatic setting.

Arm type	Experimental
Investigational medicinal product name	Atezolizumab

-----------------	--

End point description:

DOR is interval between date of first occurrence of a CR or PR that is subsequently confirmed (whichever status is recorded first) and the first date that PD or death is documented, whichever occurs first as measured by RECIST v1.1. CR: disappearance of all target and non-target lesions. Any pathological lymph nodes (target or non-target) must have reduction in short axis to <10mm; PR: \geq 30 % decrease from baseline in sum of diameters of target lesions, non-PD non-target lesions and no new lesions; PD: one or more of the following: at least 20% increase from nadir in sum of diameters of target lesions (with an absolute increase of at least 5mm), appearance of new lesions, and/or unequivocal progression of non-target lesions. DOR was assessed by Kaplan-Meier estimates. Results were reported by line of therapy (reporting arms) and PD-L1 Expression Subgroup (TC3 or IC3, TC3 or IC2/3, TC2/3 or IC2/3).

End point description:

TIR is interval between date of first occurrence of a CR or PR that is subsequently confirmed (whichever status is recorded first) and first date that PD or death is documented, whichever occurs first as measured by modified RECIST. For responders, TIR was the same as DOR; for non-responders, TIR was considered as an event and defined as the date of first treatment plus one day. TIR was assessed by Kaplan-Meier estimates.

Reporting groups

Reporting group title	Cohort 1: First Line Atezolizumab
-----------------------	-----------------------------------

Reporting group description:

Participants received 1200 milligrams (mg) atezolizumab every 3 weeks (Day 1 of 21 day cycle) administered by intravenous (IV) infusion until intolerable toxicity, disease progression or death. Participants in this cohort received no prior chemotherapy in locally advanced or metastatic setting.

Reporting group title	Cohort 2: Second Line Atezolizumab
-----------------------	------------------------------------

Reporting group description:

Participants received 1200 mg atezolizumab every 3 weeks (Day 1 of 21-day cycle) administered by IV infusion until intolerable toxicity, disease progression or death. Participants were permitted to continue treatment after progressive disease, if the following criteria were met: evidence of clinical benefit as assessed by the investigator; absence of symptoms and signs indicating unequivocal progression of disease; no decline in Eastern Cooperative Oncology Group (ECOG) performance status; absence of tumor growth at critical anatomical sites that cannot be managed by protocol-allowed medical interventions; evidence of clinical benefit as assessed by the investigator. Participants in this cohort progressed during or after prior platinum-based chemotherapy in locally advanced or metastatic setting.

Reporting group title	Cohort 3: Third Line and Beyond Atezolizumab
-----------------------	--

Reporting group description:

Participants received 1200 mg atezolizumab every 3 weeks (Day 1 of 21-day cycle) administered by IV infusion until intolerable toxicity, disease progression or death. Participants were permitted to continue treatment after progressive disease, if the following criteria were met: absence of symptoms and signs indicating unequivocal progression of disease; no decline in ECOG performance status; absence of tumor growth at critical anatomical sites that cannot be managed by protocol-allowed medical interventions; evidence of clinical benefit as assessed by the investigator. Participants in this cohort progressed during or after prior platinum-based chemotherapy and at least one additional therapy in locally advanced or metastatic setting.
