

Clinical trial results:

A Phase III, Randomized, Double-Blind, Placebo-Controlled, Parallel-Group, Multicenter, Efficacy and Safety Study of Gantenerumab in Patients With Mild Alzheimer's Disease; Part II: Open-Label Extension For Participating Patients

Summary

EudraCT number	2013-003390-95
Trial protocol	GB DE SE ES PT IT NL BE HU FI BG DK FR
Global end of trial date	16 April 2021

Results information

Result version number	v2 (current)
This version publication date	22 July 2022
First version publication date	25 April 2022
Version creation reason	<ul style="list-style-type: none">• Correction of full data set Updated pre-assignment details, updated overall number of participants analysed, timeframe, and unit of measure in the endpoint.

Trial information

Trial identification

Sponsor protocol code	WN28745

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 April 2021
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	16 April 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the effect of subcutaneous Gantenerumab on cognition and function in mild Alzheimer's disease.

Protection of trial subjects:

All study subjects were required to sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 March 2014
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	1 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 9
Country: Number of subjects enrolled	Argentina: 7
Country: Number of subjects enrolled	Belgium: 4
Country: Number of subjects enrolled	Canada: 34
Country: Number of subjects enrolled	Switzerland: 4
Country: Number of subjects enrolled	Germany: 16
Country: Number of subjects enrolled	Denmark: 14
Country: Number of subjects enrolled	Spain: 31
Country: Number of subjects enrolled	Finland: 4
Country: Number of subjects enrolled	France: 15
Country: Number of subjects enrolled	United Kingdom: 18
Country: Number of subjects enrolled	Hungary: 5
Country: Number of subjects enrolled	Italy: 19
Country: Number of subjects enrolled	Japan: 21
Country: Number of subjects enrolled	Korea, Republic of: 22
Country: Number of subjects enrolled	Netherlands: 8
Country: Number of subjects enrolled	Portugal: 6
Country: Number of subjects enrolled	Russian Federation: 28
Country: Number of subjects enrolled	Sweden: 14
Country: Number of subjects enrolled	Turkey: 13

Country: Number of subjects enrolled	United States: 95
Worldwide total number of subjects	387
EEA total number of subjects	136

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	105
From 65 to 84 years	273
85 years and over	9

Subject disposition

Recruitment

Recruitment details:

Part 1 of the study was conducted at 116 centers in 21 countries and part 2 was conducted at 75 centers in 17 countries.

Pre-assignment

Screening details:

A total of 389 participants were enrolled out of which 387 randomised and treated (192=gantenerumab and 195=placebo) in part 1 of study. Of these, a total of 230 participants enrolled in Part 2 of study: 225 participants received at least one dose of study drug. Participants who discontinued from Part 1 of study were not allowed to enroll in Part 2.

Period 1

Period 1 title	Part 1: Double Blind Treatment
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Part 1: Placebo

Arm description:

Participants received matching placebo by SC injection Q4W up to 100 weeks during Part 1 of the study.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received gantenerumab matching placebo SC injection Q4W.

Arm title	Part 1: Gantenerumab
------------------	----------------------

Arm description:

Participants received 105 mg Gantenerumab by SC injection Q4W for 24 weeks and if eligible 225 mg SC injection Q4W from weeks 28-100 during Part 1 of the study.

Arm type	Experimental
Investigational medicinal product name	Gantenerumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received gantenerumab SC injection Q4W.

Number of subjects in period 1	Part 1: Placebo	Part 1: Gantenerumab
Started	195	192
Completed	134	136
Not completed	61	56
Physician decision	2	4
Non-Compliance	2	4
Part 1 Terminated by Sponsor	3	2
Death	3	3
Not specified	6	3
Adverse event	2	8
Lost to follow-up	1	2
Withdrawal by subject	42	29
Protocol deviation	-	1

Period 2

Period 2 title	Part 2: Open-label Extension
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Part 2 (OLE treatment): Placebo switched to Gant to 1200 mg

Arm description:

Participants who had received Placebo in Part 1, received Gantenerumab at doses up to 1200 mg by SC injection Q4W for up to 2 years. Additionally, participants were given the option to continue receiving open-label gantenerumab treatment for 3 years.

Arm type	Experimental
Investigational medicinal product name	Gantenerumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received gantenerumab SC injection Q4W

Arm title	Part 2 (OLE treatment): Gantenerumab up to 1200 mg
------------------	--

Arm description:

Participants who had received Gantenerumab in Part 1, received treatment at doses up to 1200 mg by SC injection Q4W for up to 2 years. Additionally, participants were given the option to continue receiving open-label gantenerumab treatment for 3 years.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Gantenerumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received gantenerumab SC injection Q4W

Number of subjects in period 2^[1]	Part 2 (OLE treatment): Placebo switched to Gant to 1200 mg	Part 2 (OLE treatment): Gantenerumab up to 1200 mg
Started	119	111
Completed	49	50
Not completed	70	61
Physician decision	8	5
Non-Compliance	1	1
Study Terminated By Sponsor	-	1
Death	7	4
Not specified	9	9
Adverse event	6	8
Withdrawal by subjects	39	32
Lost to follow-up	-	1

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: A total of 230 participants were enrolled in OLE. Of these, 225 were treated in OLE phase.

Baseline characteristics

Reporting groups

Reporting group title	Part 1: Placebo
Reporting group description:	
Participants received matching placebo by SC injection Q4W up to 100 weeks during Part 1 of the study.	
Reporting group title	Part 1: Gantenerumab
Reporting group description:	
Participants received 105 mg Gantenerumab by SC injection Q4W for 24 weeks and if eligible 225 mg SC injection Q4W from weeks 28-100 during Part 1 of the study.

Primary: Part 2: Percentage of Participants with Adverse Events (AEs) or Serious Adverse Events (SAEs)

End point title	Part 2: Percentage of Participants with Adverse Events (AEs) or Serious Adverse Events (SAEs) ^[1]
End point description: An AE is any untoward medical occurrence in a participant administered a pharmaceutical product and which does not necessarily have to have a causal relationship with the treatment. An adverse event can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding, for example), symptom, or disease temporally associated with the use of a pharmaceutical product, whether or not considered related to the pharmaceutical product. SAE is any adverse event that is fatal or which requires or prolongs inpatient hospitalization or results in persistent or significant disability/incapacity or causes congenital anomaly/birth defect or results in a significant medical event in the investigator's judgment.	
End point type	Primary
End point timeframe: First dose up to 4 weeks after the last dose of study drug (up to 249 weeks)	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analyses were performed

End point values	Part 2 (OLE treatment): Placebo switched to Gant to 1200 mg	Part 2 (OLE treatment): Gantenerumab up to 1200 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	117	108		
Units: Percentage of Participants				
number (not applicable)				
AEs	91.5	95.4		
SAEs	24.8	38.0		

Statistical analyses

No statistical analyses for this end point

Primary: Part 2: Percentage of Participants with Treatment Emergent Anti-Drug Antibodies (ADAs)

End point title	Part 2: Percentage of Participants with Treatment Emergent Anti-Drug Antibodies (ADAs) ^[2]
-----------------	---

End point description:

Participants were considered positive or negative for ADA based on their baseline and post-baseline sample results. The number and percentage of participants with confirmed positive ADA levels were determined for participants previously (in part 1) on Gantenerumab and Placebo. The prevalence of ADA at baseline was calculated as the percentage of participants with confirmed positive ADA levels at baseline relative to the total number of participants with a sample available at baseline. The incidence of treatment-emergent ADAs was determined as the percentage of participants with confirmed post-baseline positive ADAs relative to the total number of participants that had at least one post-baseline sample available for ADA analysis.

End point type	Primary
----------------	---------

End point timeframe:

First dose up to last dose (Baseline up to until maximum 5 years)

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analyses were performed

End point values	Part 2 (OLE treatment): Placebo switched to Gant to 1200 mg	Part 2 (OLE treatment): Gantenerumab up to 1200 mg

Secondary: Part 2: Change from Baseline in Brain Amyloid Load at Week 156 in a Subset of Participants

End point title	Part 2: Change from Baseline in Brain Amyloid Load at Week 156 in a Subset of Participants
-----------------	--

End point description:

Brain amyloid load over time was assessed using a Florbetapir [F18] injection, a positron emission tomography (PET) radioligand selective to amyloid. Analysis was conducted in a subset of participants who signed consent to participate in the PET substudy. Amyloid PET burden was measured in a composite region of interest (ROI) by using standardized uptake value ratio (SUVR) mapped to the centiloid scale. The composite region was composed of the following six bilateral regions: frontal lobe, parietal lobe, temporal lobe, posterior cingulate cortex, anterior cingulate cortex. The reference region used to normalize the composite region was the cerebellar cortex. SUVR is ratio of tracer uptake in each of cingulate, frontal, parietal and temporal cortexes relative to cerebellum. The centiloid scale anchor points are 0 and 100, where 0 represents a high-certainty amyloid negative scan and 100 represents the amount of global amyloid deposition found in a typical AD scans. Safety population.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline up to 52 weeks after the last dose of study drug (up to 7 years)

Adverse event reporting additional description:

The safety-evaluable population consisted of all participants who had received at least one dose of study drug, regardless of whether the participants withdrew prematurely or not.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 October 2014	<p>A. Protocol was amended to allow for higher doses of gantenerumab to be examined in an open-label extension and the positron emission tomography (PET) substudy protocol was amended to reflect these changes and to allow subjects participating in the PET substudy to continue their yearly PET scans according to the open label schedule.</p> <p>B. Overview section was updated to explain overall changes.</p> <p>C. Update was made in rationale of study to explain the need for up-titration.</p> <p>D. Study design was updated to allow for transition into open label. Also, to update the number of subjects, treatment allocation and to delete the arterial blood sampling.</p> <p>E. Number of subjects and inclusion criteria was updated</p> <p>F. Schedule of Assessment and Procedures was updated.</p> <p>G. Need for an additional scan was updated in preparation and administration of the radioligand.</p> <p>H. Warnings and precautions, sample size information and overall statistical plan was updated.</p> <p>I. Ongoing review of the PET data by Sponsor included in interim review of study results.</p>
27 October 2015	<p>A. Protocol body was updated to clarify Part 1 from Part 2.</p> <p>B. Protocol was amended to allow for higher doses of gantenerumab to be examined in an open-label extension and to achieve higher dosing using an APOE ε4-based titration schedule and corresponding magnetic resonance imaging monitoring.</p> <p>C. Screening examination and eligibility screening form were updated.</p> <p>D. Update was made to reflect the abbreviated rescreening visit can be combined with baseline visit as long as all procedures required at screening and Baseline are performed.</p> <p>E. Serology requirements for the screening and re-screening visits were specified.</p> <p>F. Schedule of assessments was updated.</p> <p>G. Roche reporting requirements were updated.</p>
02 December 2017	<p>A. Protocol was amended to allow subjects the option to continue receiving open-label gantenerumab until the end of 2020.</p> <p>B. The number of studies in which gantenerumab is investigated were updated in background on Gantenerumab.</p> <p>C. The period of review for independent data monitoring committee has been clarified.</p> <p>D. The Cardiac-PET substudy has been updated to reflect updated status.</p> <p>E. Update was made to reflect MMSE is the only efficacy outcome measure assessed during additional years of part 2.</p> <p>F. Removed the cardiac PET substudy because the substudy has been stopped.</p> <p>G. Pharmacokinetic sampling in case of amyloid-related imaging abnormality findings has been clarified.</p> <p>H. Medical monitor information has been updated to reflect the change in Medical Monitor.</p> <p>I. The reporting of the term "sudden death" has been updated.</p> <p>J. Event reporting for hospitalization has been clarified.</p> <p>K. The process for reviewing and handling protocol deviations has been updated.</p> <p>L. Appendix 2 has been updated to indicate assessments collected during the additional years of OLE.</p>

28 February 2020	<p>A. Protocol was amended to allow participants who complete dosing visits in study WN28745 to enroll in an OLE study (WN41874) without any unnecessary dosing gap, and to enable the use of leftover plasma samples, collected for PK and ADA analysis, for exploratory biomarker research.</p> <p>B. Update was made to clarify that amyloid-related imaging abnormalities (both edema/effusion and hemosiderin depositions) and injection-site reactions are identified risks for gantenerumab and to enable participants to enroll in study WN41874 (open-label rollover study) to continue to receive gantenerumab for 2 more years. Participants who enroll in study WN41874 will not undergo follow-up assessments 16 weeks after their last dose (Follow-Up 2 visit).</p> <p>C. Positron emission tomography tracers used in the substudies associated in this substudy are included as investigational medicinal products (IMPs) or non-IMPs.</p> <p>D. Update was made to enable the use of leftover plasma samples, collected for PK and ADA analysis, for exploratory biomarker research and to clarify the timing of follow-up visits for Part 1 versus Part 2.</p> <p>E. Medical Monitor contact information was updated.</p> <p>F. Documents to be used for reference safety information for the PET tracers have been specified.</p> <p>G. Appendix 2 has been corrected to clarify that treatment is not to be administered at the Follow-Up 1 visit.</p> <p>H. Appendix 2 has been updated to add an optional lumbar puncture at Week 104 for all participants.</p>
------------------	--

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

As the participants transitioned early to OLE, most participants did not reach the primary analysis timepoint (Week 104). Hence, the efficacy endpoints for Part 1 became exploratory in nature.

Notes:
