Clinical trial results:
A Randomised, Double-Blind, Placebo-Controlled, Multicentre Phase II Study to Compare the Efficacy, Safety and Tolerability of Olaparib Versus Placebo When Given in Addition to Abiraterone Treatment in Patients With Metastatic Castrate-Resistant Prostate Cancer Who Have Received Prior Chemotherapy Containing Docetaxel

Summary

EudraCT number	2013-003520-37

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 September 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	22 September 2017
Global end of trial reached?	Yes
Global end of trial date	24 August 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

In Part A, to assess the safety and tolerability of olaparib twice daily (bid) administration when given in addition to abiraterone and to recommend, by assessment of dose-limiting toxicities (DLTs) and other safety and tolerability data, a dose of olaparib for further study when given in addition to abiraterone. In Part B, to compare the efficacy of olaparib when given in addition to abiraterone, with placebo given in addition to abiraterone.

Protection of trial subjects:

This study was performed in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with International Council on Harmonisation/Good Clinical Practice, applicable regulatory requirements and the AstraZeneca policy on Bioethics and Human Biological Samples.

Background therapy:

Patients received abiraterone 1000 milligrams (mg) once daily. Abiraterone is indicated in combination with prednisone or prednisolone 5 mg once daily for the treatment of patients with metastatic castrate-resistant prostate cancer (mCRPC).

Evidence for comparator: -

Actual start date of recruitment	01 April 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 24
Country: Number of subjects enrolled	United Kingdom: 27
Country: Number of subjects enrolled	Italy: 17
Country: Number of subjects enrolled	Belgium: 4
Country: Number of subjects enrolled	Canada: 11
Country: Number of subjects enrolled	Czechia: 13
Country: Number of subjects enrolled	France: 5
Country: Number of subjects enrolled	Netherlands: 5
Country: Number of subjects enrolled	Russian Federation: 31
Country: Number of subjects enrolled	Poland: 19
Country: Number of subjects enrolled	United States: 2
Worldwide total number of subjects	158
EEA total number of subjects	87

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	42
From 65 to 84 years	114
85 years and over	2

Subject disposition

Recruitment

Recruitment details:

In this 2-part study, patients with mCRPC were recruited at 41 sites in Europe, Russia and North America. Part A had 2 cohorts for olaparib dose selection when given with approved treatment abiraterone. Part B compared olaparib versus placebo both with abiraterone in post-chemotherapy mCRPC patients.

Pre-assignment

Screening details:

Patients dosed in open-label Part A could not participate in Part B which was a randomised, double-blind, placebo-controlled comparison of olaparib + abiraterone versus placebo + abiraterone in patients who had received prior chemotherapy containing docetaxel.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Arms

Are arms mutually exclusive?	Yes
Arm title	Part A Cohort 1: Olaparib 200 mg + abiraterone

Arm description:

Patients received olaparib 200 mg bid and abiraterone 1000 mg once daily. Patients were assessed at Weeks 1, 2 and 4, then every 4 weeks up to Week 52, and every 12 weeks thereafter.
Patients also received prednisone or prednisolone 5 mg bid in combination with the abiraterone treatment.

Arm type	Experimental
Investigational medicinal product name	Olaparib
Investigational medicinal product code	AZD2281
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received 200 mg olaparib bid, administered as 2 x 100 mg tablets.

Investigational medicinal product name	Prednisolone
Investigational medicinal product code	
Other name	Prednisone
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received 5 mg prednisolone or prednisone once daily as indicated with abiraterone treatment for mCRPC.

Investigational medicinal product name	Abiraterone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received 1000 mg abiraterone once daily, administered as 4 x 250 mg tablets.

Arm title	Part A Cohort 2: Olaparib 300 mg + abiraterone

Arm description:

If the combination of olaparib 200 mg + abiraterone 1000 mg was well tolerated (determined after a minimum of 14 days treatment in Cohort 1), patients were recruited into Cohort 2. Cohort 2 Group 1: patients received olaparib 300 mg bid alone for 3 to 7 days. Patients then received olaparib 300 mg bid and abiraterone 1000 mg once daily for at least 5 days. Cohort 2 Group 2: patients received abiraterone 1000 mg once daily alone for 5 to 7 days. Patients then received olaparib 300 mg bid and abiraterone 1000 mg once daily for at least 3 days.
Patients also received prednisone or prednisolone 5 mg bid in combination with the abiraterone treatment.

Arm type	Experimental
Investigational medicinal product name	Olaparib
Investigational medicinal product code	AZD2281
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received 300 mg olaparib bid, administered as 3 x 100 mg tablets or 2 x 150 mg tablets.

Investigational medicinal product name	Prednisolone
Investigational medicinal product code	
Other name	Prednisone
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received 5 mg prednisolone or prednisone once daily as indicated with abiraterone treatment for mCRPC.

Investigational medicinal product name	Abiraterone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received 1000 mg abiraterone once daily, administered as 4 x 250 mg tablets.

Arm title	Part B: Olaparib + abiraterone

Arm description:

Patients received the selected dose of olaparib 300 mg bid + abiraterone 1000 mg once daily. Patients were assessed every 4 weeks up to Week 52, and every 12 weeks thereafter. Patients also received prednisone or prednisolone 5 mg bid in combination with the abiraterone treatment.

Arm type	Experimental
Investigational medicinal product name	Olaparib
Investigational medicinal product code	AZD2281
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received 300 mg olaparib bid, administered as 3 x 100 mg tablets or 2 x 150 mg tablets.

Investigational medicinal product name	Prednisolone
Investigational medicinal product code	
Other name	Prednisone
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received 5 mg prednisolone or prednisone once daily as indicated with abiraterone treatment for mCRPC.

Investigational medicinal product name	Abiraterone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received 1000 mg abiraterone once daily, administered as 4 x 250 mg tablets.

Arm title	Part B: Placebo + abiraterone

Arm description:

Patients received placebo bid + abiraterone 1000 mg once daily. Patients were assessed every 4 weeks up to Week 52, and every 12 weeks thereafter. Patients also received prednisone or prednisolone 5 mg bid in combination with the abiraterone treatment.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received placebo to match olaparib 100 mg or 150 mg tablets.

Investigational medicinal product name	Abiraterone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received 1000 mg abiraterone once daily, administered as 4 x 250 mg tablets.

Investigational medicinal product name	Prednisolone
Investigational medicinal product code	
Other name	Prednisone
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received 5 mg prednisolone or prednisone once daily as indicated with abiraterone treatment for mCRPC.

End points

End points reporting groups

Reporting group title	Part A Cohort 1: Olaparib 200 mg + abiraterone

Reporting group description:

Patients received olaparib 200 mg bid and abiraterone 1000 mg once daily. Patients were assessed at Weeks 1, 2 and 4, then every 4 weeks up to Week 52, and every 12 weeks thereafter.
Patients also received prednisone or prednisolone 5 mg bid in combination with the abiraterone treatment.

Reporting group title	Part A Cohort 2: Olaparib 300 mg + abiraterone

Reporting group description:

If the combination of olaparib 200 mg + abiraterone 1000 mg was well tolerated (determined after a minimum of 14 days treatment in Cohort 1), patients were recruited into Cohort 2. Cohort 2 Group 1: patients received olaparib 300 mg bid alone for 3 to 7 days. Patients then received olaparib 300 mg bid and abiraterone 1000 mg once daily for at least 5 days. Cohort 2 Group 2: patients received abiraterone 1000 mg once daily alone for 5 to 7 days. Patients then received olaparib 300 mg bid and abiraterone 1000 mg once daily for at least 3 days.
Patients also received prednisone or prednisolone 5 mg bid in combination with the abiraterone treatment.

Reporting group title	Part B: Olaparib + abiraterone

Reporting group description:

Patients received the selected dose of olaparib 300 mg bid + abiraterone 1000 mg once daily. Patients were assessed every 4 weeks up to Week 52, and every 12 weeks thereafter. Patients also received prednisone or prednisolone 5 mg bid in combination with the abiraterone treatment.

Reporting group title	Part B: Placebo + abiraterone

Reporting group description:

Patients received placebo bid + abiraterone 1000 mg once daily. Patients were assessed every 4 weeks up to Week 52, and every 12 weeks thereafter. Patients also received prednisone or prednisolone 5 mg bid in combination with the abiraterone treatment.

Subject analysis set title	Part A Cohort 2 Group 1: Olaparib, olaparib + abiraterone
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Patients received olaparib 300 mg bid alone for 3 to 7 days to determine the steady state PK profile for olaparib. Patients then received olaparib 300 mg bid and abiraterone 1000 mg once daily for at least 5 days to determine the PK profiles of both olaparib and abiraterone.
Patients also received prednisone or prednisolone 5 mg bid in combination with the abiraterone treatment.

Subject analysis set title	Part A Cohort 2 Group 2: Abiraterone, olaparib + abiraterone
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Patients received abiraterone 1000 mg once daily alone for 5 to 7 days to determine the steady state PK profile for abiraterone. Patients then received olaparib 300 mg bid and abiraterone 1000 mg once daily for at least 3 days to determine the PK profiles of both olaparib and abiraterone.
Patients also received prednisone or prednisolone 5 mg bid in combination with the abiraterone treatment.

Primary: Part A: Percentage of Patients Experiencing Adverse Events (AEs)

End point title	Part A: Percentage of Patients Experiencing Adverse Events (AEs)[1][2]

End point description:

The safety and tolerability of olaparib in combination with abiraterone was assessed during Part A of the study. The percentage of patients experiencing AEs, including information on seriousness, severity, study treatment relationship and those leading to discontinuation for all doses of olaparib and for abiraterone are presented. Severity of AEs was assessed using the National Cancer Institute (NCI) Common Terminology Criteria for Adverse events (CTCAE) v4.0. AEs were assigned to a Grade from 1 through 5 as follows: Grade 1: Mild; Grade 2: Moderate; Grade 3: Severe or medically significant but not immediately life-threatening requiring hospitalisation; Grade 4: Life-threatening consequences; Grade 5: Death related to AE. 'c-r' = causally related 'discont' = discontinuation.
The Part A Safety analysis set consisted of all patients who received at least 1 dose of study treatment

in Part A.

End point type	Primary

End point timeframe:

Cohort 1 and 2: From Baseline in Part A (Day 1 for each cohort) up to 30 days following last dose of study treatment (up to approximately 3 years).

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.
Justification: Part A was a safety run where safety and tolerability were assessed. Thus, no statistical analyses was required.
[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: Part A was a safety run where safety and tolerability were assessed. Thus, no statistical analyses was required.

Statistical analyses

No statistical analyses for this end point

Primary: Part A: Number of Patients with DLTs

End point title	Part A: Number of Patients with DLTs[3][4]

End point description:

DLTs were assessed by a Safety Review Committee (SRC) after a minimum of 3 patients had received at least 14 days of treatment in Part A. A DLT was defined as any toxicity which was not a recognised AE of abiraterone or prednisolone, and was not attributable to the disease or disease-related processes under investigation, which occurred during a minimum period of 14 days treatment and which included: 1. haematological toxicity CTCAE v4.0 Grade 4 or higher present for more than 4 days (except anaemia); 2. non-haematological toxicity CTCAE v4.0 Grade 3 or higher including infection, corrected QT interval prolongation; 3. any other toxicity that was greater than that at baseline, was clinically significant and/or unacceptable, did not respond to supportive care, resulted in a disruption of dosing schedule of 7

days or more, or was judged to be a DLT by the SRC. A DLT excluded alopecia and isolated laboratory changes of any grade without clinical sequelae or clinical significance.

End point type	Primary

End point timeframe:

From Day 1 for Cohort 1 and from Day 4 for Cohort 2 up to 14 days treatment with olaparib + abiraterone for 3 patients.

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.
Justification: Part A was a safety run where safety and tolerability were assessed. Thus, no statistical analyses was required.
[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: Part A was a safety run where safety and tolerability were assessed. Thus, no statistical analyses was required.

number (not applicable)	2	4		

Statistical analyses

No statistical analyses for this end point

Primary: Part B: Median Radiological Progression-Free Survival (rPFS) Time

End point title	Part B: Median Radiological Progression-Free Survival (rPFS) Time[5][6]

End point description:

The efficacy of olaparib when given in combination with abiraterone was assessed by rPFS, defined as the time from randomisation to disease progression using Response Evaluation Criteria in Solid Tumours (RECIST) version 1.1 (for soft tissue disease) and Prostate Cancer Working Group 2 (PCWG-2) (for bone disease) criteria, or death. Progression using RECIST 1.1 criteria was defined as at least 20% increase from baseline in the sum of diameters of target lesions, progression of existing non-target lesions, or the appearance of at least 1 new lesion. Progression using PCWG-2 criteria was determined if 2 or more new metastatic bone lesions were observed (with a total of at least 4 new lesions since baseline assessment if observed at the 12 week scan, or persistence of or increase in number of lesions if observed after the 12 week scan as determined by a confirmatory scan at least 6 weeks later or at next scheduled visit).

End point type	Primary

End point timeframe:

From baseline, every 12 weeks up to Week 72, then every 24 weeks up to 24 months.

Notes:

[5] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.
Justification: Only the Median which is a descriptive measure was presented here. Hence, no statistical analysis is needed here.
[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: Only the Median which is a descriptive measure was presented here. Hence, no statistical analysis is needed here.

End point values	Part B: Olaparib + abiraterone	Part B: Placebo + abiraterone		
Subject group type	Reporting group	Reporting group

lower limit	0.438
upper limit	0.969

Secondary: Part A Pharmacokinetics (PK): Olaparib Maximum Plasma Concentration at Steady State (Cmax,ss)

End point title	Part A Pharmacokinetics (PK): Olaparib Maximum Plasma Concentration at Steady State (Cmax,ss)

End point description:

Following multiple dosing to steady state of olaparib 300 mg bid, the Cohort 2 olaparib Cmax,ss is presented for olaparib monotherapy and for olaparib given in combination with abiraterone. Only patients with data available for analysis at each time point are presented.
The PK analysis set consisted of all patients who received at least 1 dose of olaparib per the protocol, for whom there was at least 1 reportable PK concentration and who had no important protocol deviations or AEs that impacted on PK on all PK sampling days.

End point type	Secondary

End point timeframe:

PK sampling for Cohort 2 Group 1 was between Days 3 and 7 for olaparib, and Days 4 and 8 for olaparib and abiraterone. PK sampling for Cohort 2 Group 2 was between Days 5 and 7 for abiraterone, and Days 6 and 8 for olaparib and abiraterone.

Statistical analyses

No statistical analyses for this end point

Secondary: Part B: Percentage of Patients Experiencing AEs

End point title	Part B: Percentage of Patients Experiencing AEs[15]

End point description:

The safety and tolerability of olaparib when given in combination with abiraterone was assessed during Part B of the study. The percentage of patients experiencing AEs, including information on seriousness, severity, study treatment relationship and those leading to discontinuation for all doses of olaparib and for abiraterone are presented. Severity of AEs was assessed using the NCI Common Terminology CTCAE v4.0. AEs were assigned to a Grade from 1 through 5 as follows: Grade 1: Mild; Grade 2: Moderate; Grade 3: Severe or medically significant but not immediately life-threatening requiring hospitalisation; Grade 4: Life-threatening consequences; Grade 5: Death related to AE. 'c-r' = causally related. 'discont' = discontinuation. 'ola/pla' = olaparib/placebo.
Part B safety analysis set consisted of all patients randomised into Part B of the study who received at least 1 dose of olaparib/placebo.

End point type	Secondary

End point timeframe:

From first dose of study treatment following randomisation in Part B up to 30 days following last dose of study treatment (up to approximately 3 years).

Number of subjects analysed	71[28]	71		
Units: Months				
median (confidence interval 95%)	23.3 (17.4 to 99999999)	18.5 (16.1 to 23.8)		

Notes:

[28] - Too few patients with events to allow calculation of upper limit for 95% confidence interval.

Statistical analyses

Statistical analysis title	Comparison of PFS2
Comparison groups	Part B: Olaparib + abiraterone v Part B: Placebo + abiraterone

Number of subjects included in analysis	142
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.14 [29]
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	0.788
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.511
upper limit	1.215

Notes:

[29] - The p value was calculated with a 1-sided significance level of 2.5%.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Part A: From baseline (Day 1 for each cohort) up to 30 days following last dose of study treatment. Part B: From first dose of study treatment following randomisation up to 30 days following last dose of study treatment (up to approximately 3 years).

Adverse event reporting additional description:

The Part A Safety analysis set consisted of all patients who received at least 1 dose of study treatment in Part A.
Part B safety analysis set consisted of all patients randomised into Part B of the study who received at least 1 dose of olaparib/placebo.

Assessment type	Systematic

Dictionary used

Dictionary name	MedDRA
Dictionary version	20.0

Reporting groups

Reporting group title	Part A Cohort 1: Olaparib 200 mg + abiraterone

Reporting group description:

Patients received olaparib 200 mg bid and abiraterone 1000 mg once daily. Patients were assessed at Weeks 1, 2 and 4, then every 4 weeks up to Week 52, and every 12 weeks thereafter. Patients also received prednisone or prednisolone 5 mg bid in combination with the abiraterone treatment.

Reporting group title	Part A Cohort 2: Olaparib 300 mg + abiraterone

Reporting group description:

If the combination of olaparib 200 mg + abiraterone 1000 mg was well tolerated (determined after a minimum of 14 days treatment in Cohort 1), patients were recruited into Cohort 2. Cohort 2 Group 1: patients received olaparib 300 mg bid alone for 3 to 7 days. Patients then received olaparib 300 mg bid and abiraterone 1000 mg once daily for at least 5 days. Cohort 2 Group 2: patients received abiraterone 1000 mg once daily alone for 5 to 7 days. Patients then received olaparib 300 mg bid and abiraterone 1000 mg once daily for at least 3 days. Patients also received prednisone or prednisolone 5 mg bid in combination with the abiraterone treatment.

Reporting group title	Part B: Olaparib + abiraterone

Reporting group description:

Patients received the selected dose of olaparib 300 mg bid + abiraterone 1000 mg once daily. Patients were assessed every 4 weeks up to Week 52, and every 12 weeks thereafter. Patients also received prednisone or prednisolone 5 mg bid in combination with the abiraterone treatment.

Reporting group title	Part B: Placebo + abiraterone

Reporting group description:

Patients received placebo bid + abiraterone 1000 mg once daily. Patients were assessed every 4 weeks up to Week 52, and every 12 weeks thereafter. Patients also received prednisone or prednisolone 5 mg bid in combination with the abiraterone treatment.

Serious adverse events	Part A Cohort 1: Olaparib 200 mg + abiraterone	Part A Cohort 2: Olaparib 300 mg + abiraterone	Part B: Olaparib + abiraterone

Hyperglycaemia subjects affected / exposed occurrences (all)	1 / 71 (1.41%) 2		
Hypocalcaemia subjects affected / exposed occurrences (all)	2 / 71 (2.82%) 2		
Hypokalaemia subjects affected / exposed occurrences (all)	4 / 71 (5.63%) 6		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 August 2014	-Frequency of clinic visits increased to every 4 weeks for first 52 weeks. -Log rank test replaced Cox proportional hazrd model as primary analysis for time-to-event endpoints. -Inclusion of additional Eastern Cooperative Oncology Group assessments to Part B. -Removed text relating to a separate study for chemotherapy-naive CRPC patients as study was not planned; and text relating to closure of Part A database. -Amendment of text relating to Hy's law cases.
13 October 2015	-Secondary endpoints amended to include investigation of Ataxia telangiectasia mutated gene and Breast cancer gene mutations as candidate predictors of response to olaparib. -Changes to text relating to contraception during study. -Updated text regarding olaparib drug-drug interactions to reflect recent findings. -Added text to state once olaparib/placebo dose had been reduced, escalation was not permitted to clarify dose reduction management. -Text regarding olaparib anaemia management was updated.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

'99999999' in the end points section indicates data is not available.

Notes:
