Clinical trial results:
A Study of IPI-145 and Ofatumumab in Patients With Chronic Lymphocytic Leukemia/Small Lymphocytic Lymphoma Previously Enrolled in Study IPI-145-07 Duvelisib (IPI-145)

Summary

EudraCT number	2013-003639-31
Trial protocol	IT HU ES GB BE AT DE FR LV GR
Global end of trial date	12 June 2020

Results information

Result version number	v2 (current)
This version publication date	06 October 2023
First version publication date	08 June 2023
Version creation reason	• Correction of full data set Results contact information has changed.

Trial information

Trial identification

Sponsor protocol code	IPI-145-12

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02049515
WHO universal trial number (UTN)	U1111-1138-8603

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 June 2020
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	12 June 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

A Phase 3 (extension) clinical trial to examine the efficacy of IPI-145 (duvelisib) monotherapy or ofatumumab monotherapy in participants with chronic lymphocytic leukemia (CLL) or small lymphocytic lymphoma who experienced disease progression after treatment with IPI-145 or ofatumumab in study IPI-145-07 (2013-002405-61).

Protection of trial subjects:

This study was conducted in accordance with the International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which the study was conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 December 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 9
Country: Number of subjects enrolled	France: 11
Country: Number of subjects enrolled	Australia: 7
Country: Number of subjects enrolled	New Zealand: 4
Country: Number of subjects enrolled	United States: 11
Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	Italy: 13
Country: Number of subjects enrolled	Spain: 11
Country: Number of subjects enrolled	Belgium: 8
Country: Number of subjects enrolled	Hungary: 15
Country: Number of subjects enrolled	United Kingdom: 8
Worldwide total number of subjects	99
EEA total number of subjects	69

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	38
From 65 to 84 years	59
85 years and over	2

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

All participants previously enrolled in study IPI-145-07 (2013-002405-61) who experienced radiologically confirmed disease progression while on treatment in that study were eligible to participate in this study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	IPI-145

Arm description:

IPI-145 was administered orally and supplied as 5 milligram (mg) and 25 mg formulated capsules.

Arm type	Experimental
Investigational medicinal product name	IPI-145
Investigational medicinal product code	
Other name	Duvelisib, Copiktra, PI3K Inhibitor
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Doses of 5, 10, 15, and 25 mg were administered orally.

Arm title	Ofatumumab

Arm description:

Ofatumumab was administered as an intravenous (IV) infusion and was supplied in single-use vials at two strengths, 100 mg/5 millilitres (mL) and 1000 mg/50 mL.

Arm type	Active comparator
Investigational medicinal product name	Ofatumumab
Investigational medicinal product code	
Other name	Arzerra
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Doses of 300 and 2000 mg were administered IV.

Number of subjects in period 1	IPI-145	Ofatumumab
Started	90	9
Received at Least 1 Dose of Study Drug	90	9
Completed	0	3
Not completed	90	6

Treatment Interruption >42 Days	1	-
Physician decision	5	1
Consent withdrawn by subject	3	-
Clinical Deterioration	1	-
Adverse event, non-fatal	46	2
Death	6	-
Need Treatment for Metastatic Melanoma	1	-
Suspected and Unconfirmed Disease Progression	1	-
Protocol-specified Disease Progression	23	2
Termination of the Study by Sponsor	2	-
Protocol deviation	1	1

End points

End points reporting groups

Reporting group title	IPI-145
Reporting group description:	
IPI-145 was administered orally and supplied as 5 milligram (mg) and 25 mg formulated capsules.	
Reporting group title	Ofatumumab
Reporting group description:	
Ofatumumab was administered as an intravenous (IV) infusion and was supplied in single-use vials at two strengths, 100 mg/5 millilitres (mL) and 1000 mg/50 mL.	
Subject analysis set title	All-treated Analysis Set
Subject analysis set type	Intention-to-treat
Subject analysis set description:	
All participants who received any amount of study drug (IPI-145 or ofatumumab).	

Primary: Overall Response Rate (ORR)

End point title	Overall Response Rate (ORR)[1]
End point description:	
ORR was defined as the percentage of participants with a best response (per investigator assessment) of complete response (CR), CR with incomplete marrow recovery (CRi), partial response (PR), or PR with lymphocytosis (PRwL), according to the International Workshop on Chronic Lymphocytic Leukemia (IWCLL) or revised International Working Group Response (IWG) Criteria, with modification for treatment-related lymphocytosis. The 95% confidence interval was calculated using exact binomial method. Select IWCLL criteria for tumour load assessed by computed tomography (CT): CR/CRi (CLL only), lymphadenopathy (none >1.5 centimetres [cm]), hepatomegaly/splenomegaly (none); PR, lymphadenopathy/hepatomegaly/splenomegaly (decrease ≥50%); PRwL, lymphadenopathy only (decrease ≥50%). Select IWG criteria for tumour load assessed by CT: CR, lymphadenopathy/hepatomegaly/splenomegaly (normal size); PR, lymphadenopathy/hepatomegaly/splenomegaly (decrease ≥50%); PRwL, lymphadenopathy only (decrease ≥50%).	
End point type	Primary
End point timeframe:	
Until progressive disease (PD), death, or other anticancer therapy is initiated (up to 4.5 years)	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.
Justification: Only descriptive statistics (median plus confidence interval) are reported for ORR.

End point values	IPI-145	Ofatumumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	90[2]	9[3]		
Units: percentage of participants				
number (confidence interval 95%)	76.7 (66.6 to 84.9)	0 (0 to 0)		

Notes:

[2] - All-treated Analysis Set

[3] - All-treated Analysis Set

Statistical analyses

No statistical analyses for this end point

Secondary: Duration of Response (DOR)

End point title	Duration of Response (DOR)

End point description:

DOR was defined as the time from the first documentation of response per investigator assessment to either PD or death due to any cause. DOR was evaluated using the Kaplan-Meier method based on all treated participants with a documentation of response (that is, CR, CRi, PR, or PRwL) as determined by investigator assessment. Select IWCLL criteria for tumour load assessed by CT: CR/CRi (CLL only), lymphadenopathy (none >1.5 cm), hepatomegaly/splenomegaly (none); PR, lymphadenopathy/hepatomegaly/splenomegaly (decrease ≥50%); PRwL, lymphadenopathy only (decrease ≥50%). Select IWG criteria for tumour load assessed by CT: CR, lymphadenopathy/hepatomegaly/splenomegaly (normal size); PR, lymphadenopathy/hepatomegaly/splenomegaly (decrease ≥50%); PRwL, lymphadenopathy only (decrease ≥50%).

End point type	Secondary

End point timeframe:

From the first documentation of response to the first documentation of PD or death due to any cause (up to 4.5 years)

End point values	IPI-145	Ofatumumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	90[4]	0[5]		
Units: months				
median (confidence interval 95%)	14.9 (8.55 to 18.6)	(to)		

Notes:

[4] - All-treated Analysis Set

[5] - DOR was determined only for treated participants with documentation of response.

Statistical analyses

No statistical analyses for this end point

Secondary: Progression-free Survival (PFS)

End point title	Progression-free Survival (PFS)

End point description:

PFS was defined as the time from the first dose of study treatment to the first documentation of either investigator-assessed PD or death resulting from any cause. PFS was determined using the Kaplan-Meier method based on all treated participants with a documentation of response (that is, CR, CRi, PR, or PRwL) as determined by investigator assessment.

End point type	Secondary

End point timeframe:

From the first dose of study treatment to the first documentation of PD or death from any cause (up to 4.5 years)

End point values	IPI-145	Ofatumumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	90[6]	0[7]		
Units: month				
median (confidence interval 95%)	15.3 (12.2 to 20.6)	(to)		

Notes:

[6] - All-treated Analysis Set

[7] - PFS was determined only for treated participants with documentation of response.

Statistical analyses

No statistical analyses for this end point

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification: This adverse event only affected female/male participants.

[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification: This adverse event only affected female/male participants.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 April 2014	• Increased complete blood count frequency to every 2 months from Baseline through Cycle 24. • Treatment modification guidelines updated with clinical data from Study IPI-145-02, including safety, efficacy, pharmacokinetic (PK), and pharmacodynamic data as of 28 October 2014; in response to PK/pharmacodynamic findings from that study, dose reduction levels changed to 15 mg twice daily (BID) for Level -1, 10 mg BID for Level -2, and 5 mg BID for Level -3 (new level), and text added to clarify that participants with a history of cytomegalovirus or Epstein-Barr virus infection and/or who enter the study while receiving antiviral prophylaxis should be monitored for reactivation via serology or viral load detection per institutional guidelines while on study treatment. • Detail added for Grade 3 or higher nonhematologic toxicity (infections, hepatic events, gastrointestinal events, skin rash, cardiac events). • In response to safety findings from Study IPI-145-07 (2013-002405-61): Detail added for Grade 2 or higher nonhematologic toxicity (new pulmonary symptoms). • Changed criteria for discontinuation of participants due to treatment-related toxicities from <25 mg once-daily dose to <15 mg BID. • In response to regulatory agency feedback, added guidance to withhold ofatumumab until return to ≤Grade 1 or Baseline level for Grade 3 thrombocytopenia associated with ≥Grade 2 hemorrhage to align with duvelisib treatment modifications. • Added new Photosafety section.
02 March 2015	• Revised treatment interruption/hold/modification guidelines to recommend treatment interruption for all events of QT interval corrected with Fridericia's method prolongation ≥Grade 3 (≥500 milliseconds). • Added clarifying text to response criteria definitions for both chronic lymphocytic leukemia and small lymphocytic lymphoma, specifically, language defining progressive disease.
24 March 2016	• To permit continued access to duvelisib beyond 24 months for participants demonstrating evidence of clinical benefit after 1 year of treatment, added text indicating that these participants were permitted to receive duvelisib monotherapy until PD, unacceptable toxicity, participant withdrawal, or start of alternate therapy (amended from the last version of the protocol, in which participants could receive treatment for only up to 2 years). • Clarified that ofatumumab was to be given for a maximum of 7 cycles and that there would be no follow-up after 2 years (Cycle 24). • Changed the frequency of clinic visits after Cycle 18 to once every 3 cycles (previously every 2 cycles).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
