

## Clinical trial results:

**Prospective, randomized, multicentre, open label, phase II / III study to assess efficacy and safety of ranibizumab 0.5 mg intravitreal injections plus panretinal photocoagulation (PRP) versus PRP in monotherapy in the treatment of subjects with high risk proliferative diabetic retinopathy. (PROTEUS)**

### Summary

EudraCT number	2013-003640-23
Trial protocol	GB PT
Global end of trial date	27 May 2016

### Results information

Result version number	v1 (current)
This version publication date	05 July 2018
First version publication date	05 July 2018
Summary attachment (see zip file)	Study Report Synopsis (Imp16-7_3_00_Study_Report_SYNOPSIS_20161128.pdf)

### Trial information

#### Trial identification

Sponsor protocol code	ECR-RET-2013-05
-----------------------	-----------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01941329
WHO universal trial number (UTN)	-

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 October 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	27 May 2016
Global end of trial reached?	Yes
Global end of trial date	27 May 2016
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To compare the efficacy of ranibizumab 0.5 mg intravitreal injections plus panretinal photocoagulation versus panretinal photocoagulation alone on the regression of the neovascularization area in patients with high-risk proliferative diabetic retinopathy over a 12-month treatment period.

Protection of trial subjects:

All the measures were taken to ensure subject safety. Study medication was dispensed to the subjects of the Study Group according to the study protocol. The Principal Investigator and all clinical study staff conducted the clinical study in compliance with the protocol. The Principal Investigator ensured that all personnel involved in the conduct of the study were qualified to perform their assigned responsibilities through relevant education, training and experience.

To ensure data confidentiality each subject was uniquely identified by a subject identification code. Only the Investigator was able to identify the subject based on the subject identification code.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 March 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Portugal: 33
Country: Number of subjects enrolled	United Kingdom: 19
Country: Number of subjects enrolled	France: 14
Country: Number of subjects enrolled	Italy: 21
Worldwide total number of subjects	87
EEA total number of subjects	87

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	68
From 65 to 84 years	18
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details:

The study population was recruited by each Investigator from his/her clinical practice and the planned study population was 94 patients.

The recruitment started on 28/03/2014, the FPFV was on 04/04/2014 and the LPLV was on 31/03/2015 (1 year of recruitment period).

### Pre-assignment

Screening details:

Subjects who signed the informed consent form participated in a screening period, lasting 1 to 30 days, to evaluate eligibility (inclusion and exclusion criteria).

122 patients were screened (87 enrolled and 35 screening failures).

### Period 1

Period 1 title	Loading Phase
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

This is an open-label study. Blinding/unblinding procedures are not applicable.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Study Group

Arm description:

The study subjects received between Month-0 and Month-2 (3-months Loading Phase) 3 ranibizumab ITV injections in Month-0, Month-1 and Month-2 combined with the standard Panretinal Photocoagulation (PRP) treatment, i.e., with 1 mandatory laser session  $2 \pm 1$  weeks after the 1st ITV injection (Month-0) and a maximum of 2 laser sessions, one  $2 \pm 1$  weeks after the 2nd ITV injection (Month-1) and another  $2 \pm 1$  weeks after the 3rd ITV injection (Month-2) to complete the PRP treatment.

Arm type	Experimental
Investigational medicinal product name	Ranibizumab
Investigational medicinal product code	S01LA04
Other name	Lucentis
Pharmaceutical forms	Solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

Intravitreal injection of ranibizumab (0.5mg)

<b>Arm title</b>	Control Group
------------------	---------------

Arm description:

The control subjects received between Month-0 and Month-2 (3-months Loading Phase) the standard Panretinal Photocoagulation (PRP) treatment, with 1 mandatory laser session in Month-0 and more laser sessions as needed until Month-2 to complete the PRP treatment.

Arm type	Active comparator (surgical procedure)
No investigational medicinal product assigned in this arm	

Number of subjects in period 1	Study Group	Control Group
Started	41	46
Completed	41	45
Not completed	0	1
Lost to follow-up	-	1

## Period 2

Period 2 title	Treatment Phase/Follow-up Visits
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

This is an open-label study. Blinding/unblinding procedures are not applicable.

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Study Group

Arm description:

From Month-3 to Month-11 (9-months Follow-Up/ Treatment Phase), combination treatment composed of 1 ranibizumab ITV injection plus 1 Panretinal Photocoagulation (PRP) session ( $2 \pm 1$  weeks after the injection) could be performed respecting always at least 1 month of interval between ITV injections. In every visit, the Investigator evaluated whether treatment should be repeated. Treatment was repeated if NV was still present (due to lack of regression or due to recurrence) and if the Investigator considered that a new treatment may bring benefit to the subject and reduce the NV area. In the Follow-up PRP treatments were performed using fill-in techniques.

Arm type	Experimental
Investigational medicinal product name	Ranibizumab
Investigational medicinal product code	S01LA04
Other name	Lucentis
Pharmaceutical forms	Solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

Intravitreal injection of ranibizumab (0.5mg)

<b>Arm title</b>	Control Group
------------------	---------------

Arm description:

From Month-3 to Month-11 (9-months Follow-Up/ Treatment Phase) patients received Panretinal Photocoagulation (PRP) as needed.

Arm type	Active comparator (surgical procedure)
No investigational medicinal product assigned in this arm	

<b>Number of subjects in period 2</b>	Study Group	Control Group
Started	41	45
Completed	39	38
Not completed	2	7
Adverse event, non-fatal	1	6
Lost to follow-up	-	1
Lack of efficacy	1	-

## Subject analysis sets

Subject analysis set title	Full Analysis Set (FAS)
Subject analysis set type	Full analysis
Subject analysis set description:	
The Full Analysis Set (FAS), consistently with ICH Guideline E9, Statistical Principles for Clinical Trials, include all randomized subjects receiving at least one study treatment and having a baseline and at least one post-baseline measurements on the primary outcome (85 patients). Subjects with major entry violations likely to affect outcome were excluded by blind review. The carrying forward of the last observation, an imputation technique, was used to compensate for missing data on the primary outcome.	
Subject analysis set title	Per Protocol (PP)
Subject analysis set type	Per protocol

Subject analysis set description:

The Per Protocol (PP) population defines a subset of the subjects in the FAS who are more compliant with the protocol and is characterised by the availability of measurements of the primary variable and the absence of any major protocol violations (57 patients). Only observed data was used in the PP population; i.e. missing data was not imputed.

Subject analysis set title	Safety Analysis
Subject analysis set type	Safety analysis

Subject analysis set description:

The safety analysis population consists of subjects who received at least one treatment (ITV injections plus PRP or PRP alone).

End point title	Need of vitrectomy
End point description: Need of vitrectomy due to the occurrence of vitreous hemorrhage, tractional retinal detachment or other complications of Diabetic Retinopathy.	
End point type	Secondary
End point timeframe: One year.	

End point values	Study Group	Control Group	Safety Analysis	
Subject group type	Reporting group	Reporting group	Subject analysis set	
Number of subjects analysed	41	44	87	
Units: 85				
Yes	1	5	6	
No	40	39	81	

## Statistical analyses

<b>Statistical analysis title</b>	Need of vitrectomy
Statistical analysis description: Need of vitrectomy due to the occurrence of vitreous haemorrhage, tractional retinal detachment or other complications of Diabetic Retinopathy was tested using Fisher's exact test.	

Comparison groups	Control Group v Study Group
Number of subjects included in analysis	85
Analysis specification	Pre-specified
Analysis type	superiority
P-value	$\leq 0.05$
Method	Fisher exact

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All Adverse Events reported by the subject (spontaneously or via study interview) were collected from the first day until 30 days after discontinuation/completion of study participation even if the event was not considered to be related to study drug.

Adverse event reporting additional description:

In case of Serious Adverse Events (SAEs), the Investigator immediately reported to the Sponsor all SAEs with the exception of those that were identified as not requiring immediate reporting in protocol. The Investigator filled in a SAE Form within 24 hours of learning of its occurrence.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	18.1
--------------------	------

### Reporting groups

Reporting group title	Study Group
-----------------------	-------------

Reporting group description:

Patients received Ranibizumab and Standard PRP (Panretinal Photocoagulation) (2±1 weeks after ITV).

Reporting group title	Control Group
-----------------------	---------------

Reporting group description:

Patients received Standard PRP (panretinal photocoagulation)

Serious adverse events	Study Group	Control Group	
Total subjects affected by serious adverse events			
subjects affected / exposed	5 / 41 (12.20%)	7 / 46 (15.22%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events			
Surgical and medical procedures			
Back surgery

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 October 2013	Changes requested by the Voluntary Harmonization Procedure in sections: Type / Design of the Study; Exclusion Criteria; Treatment arms and Study Treatment Procedure; Instructions for Prescribing and Performing / Taking the Study Treatment / Medication; and Safety Monitoring.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported

---
