

## Clinical trial results:

### A Phase III Randomized, Placebo-controlled Clinical Trial to Evaluate the Safety and Efficacy of MK-8228 (Letermovir) for the Prevention of Clinically Significant Human Cytomegalovirus (CMV) Infection in Adult, CMV Seropositive Allogeneic Hematopoietic Stem Cell Transplant Recipient

#### Summary

EudraCT number	2013-003831-31
Trial protocol	SE LT IT FI AT ES BE PL GB
Global end of trial date	21 November 2016

#### Results information

Result version number	v2 (current)
This version publication date	02 December 2017
First version publication date	19 October 2017
Version creation reason	

#### Trial information

##### Trial identification

Sponsor protocol code	8228-001
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02137772
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Merck Sharp & Dohme Corp.
Sponsor organisation address	2000 Galloping Hill Road, Kenilworth, NJ, United States, 07033

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 November 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	21 November 2016
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The study evaluated the efficacy and safety of letermovir (MK-8228) for the prevention of clinically-significant CMV infection in adult, CMV-seropositive recipients of allogeneic hematopoietic stem cell transplant (HSCT). The hypothesis being tested was that MK-8228 is superior to placebo in the prevention of clinically-significant CMV infection through Week 24 post-transplant.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 June 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 28
Country: Number of subjects enrolled	Belgium: 32
Country: Number of subjects enrolled	Brazil: 1
Country: Number of subjects enrolled	Canada: 19
Country: Number of subjects enrolled	Finland: 14
Country: Number of subjects enrolled	France: 21
Country: Number of subjects enrolled	Germany: 34
Country: Number of subjects enrolled	Italy: 32
Country: Number of subjects enrolled	Japan: 36
Country: Number of subjects enrolled	Korea, Republic of: 9
Country: Number of subjects enrolled	Lithuania: 5
Country: Number of subjects enrolled	New Zealand: 9
Country: Number of subjects enrolled	Peru: 8
Country: Number of subjects enrolled	Poland: 12
Country: Number of subjects enrolled	Romania: 7
Country: Number of subjects enrolled	Spain: 32
Country: Number of subjects enrolled	Turkey: 36
Country: Number of subjects enrolled	United Kingdom: 12
Country: Number of subjects enrolled	United States: 203

Country: Number of subjects enrolled	Sweden: 20
Worldwide total number of subjects	570
EEA total number of subjects	249

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	482
From 65 to 84 years	88
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Study participants had documented seropositivity for CMV within 1 year before transplant. A total of 738 participants were screened, 570 were randomized 2:1 letermovir:placebo, and 565 received at least one dose of study medication.

### Pre-assignment

Screening details:

Screening could occur up to 15 days before transplant and no more than 28 days post-transplant. From the time of screening to randomization, participants were tested weekly for CMV viremia; a positive test resulted in exclusion from the study.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Letermovir

Arm description:

Letermovir oral or intravenous (IV) formulation was administered once daily for up to 14 weeks, beginning up to Day 28 post-transplant. The dose was 240 mg once daily for participants receiving concomitant cyclosporin A and 480 mg once daily for participants not receiving cyclosporin A. Intravenous infusion was administered only to participants who are unable to swallow tablets or who have a condition that may interfere with absorption of the tablets.

Arm type	Experimental
Investigational medicinal product name	Letermovir Intravenous
Investigational medicinal product code	
Other name	MK-8228
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Letermovir 240 mg once daily for up to 14 weeks beginning up to Day 28 post-transplant for participants receiving concomitant cyclosporin A and 480 mg once daily for 14 weeks beginning up to Day 28 post-transplant for participants not receiving cyclosporine A. IV infusion was administered only to participants who are unable to swallow tablets or who have a condition that may interfere with absorption of the tablets. Infusion was administered in 250 mL over 60 minutes.

Investigational medicinal product name	Letermovir Oral
Investigational medicinal product code	
Other name	MK-8228
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Letermovir 240 mg once daily for up to 14 weeks beginning up to Day 28 post-transplant for participants receiving concomitant cyclosporin A and 480 mg once daily for 14 weeks beginning up to Day 28 post-transplant for participants not receiving cyclosporin A.

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

Placebo oral or IV formulation was administered once daily for up to 14 weeks, beginning up to Day 28 post-transplant. The number of placebo tablets was to mimic that for letermovir administration according to the concomitant cyclosporin A status. Intravenous infusion was administered only to

participants who are unable to swallow tablets or who have a condition that may interfere with absorption of the tablets.

Arm type	Placebo
Investigational medicinal product name	Placebo Intravenous
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Placebo once daily for up to 14 weeks beginning up to Day 28 post-transplant. IV infusion was administered only to participants who are unable to swallow tablets or who have a condition that may interfere with absorption of the tablets. Infusion was administered in 250 mL over 60 minutes.

Investigational medicinal product name	Placebo Oral
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo once daily for up to 14 weeks beginning up to Day 28 post-transplant. The number of placebo tablets was to mimic that for letermovir administration according to the concomitant cyclosporin A status.

<b>Number of subjects in period 1</b>	Letermovir	Placebo
Started	376	194
Treated participants	373	192
Completed	244	119
Not completed	132	75
Adverse event, serious fatal	71	44
Consent withdrawn by subject	28	17
Physician decision	15	5
Adverse event, non-fatal	6	3
Non-compliance with study drug	1	-
Lost to follow-up	8	4
Not treated	3	2

## Baseline characteristics

### Reporting groups

Reporting group title	Letermovir
-----------------------	------------

Reporting group description:

Letermovir oral or intravenous (IV) formulation was administered once daily for up to 14 weeks, beginning up to Day 28 post-transplant. The dose was 240 mg once daily for participants receiving concomitant cyclosporin A and 480 mg once daily for participants not receiving cyclosporin A. Intravenous infusion was administered only to participants who are unable to swallow tablets or who have a condition that may interfere with absorption of the tablets.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Placebo oral or IV formulation was administered once daily for up to 14 weeks, beginning up to Day 28 post-transplant. The number of placebo tablets was to mimic that for letermovir administration according to the concomitant cyclosporin A status. Intravenous infusion was administered only to participants who are unable to swallow tablets or who have a condition that may interfere with absorption of the tablets.

Reporting group values	Letermovir	Placebo	Total
Number of subjects	376	194	570

Gender, Male/Female			
Units: Subjects			
Female	162	77	239
Male	214	117	331
Risk Stratum for CMV Reactivation			
High risk: Participants meeting one or more of the following criteria at randomization: 1) Human leukocyte antigen (HLA)-related (sibling) donor with at least one mismatch at an HLA-A, -B or -DR gene loci 2) Haploidentical donor, 3) Unrelated donor with at least one mismatch at HLA- HLA-A, -B, -C or -DRB1 gene loci 4) Use of umbilical cord blood as stem cell source, 5) Use of ex vivo T-cell-depleted grafts, 6) Grade 2 or greater graft-versus-host disease requiring the use of systemic corticosteroids. Low risk: All other participants			
Units: Subjects			
High risk	122	54	176
Low risk	254	140	394

## End points

### End points reporting groups

Reporting group title	Letermovir
Reporting group description: Letermovir oral or intravenous (IV) formulation was administered once daily for up to 14 weeks, beginning up to Day 28 post-transplant. The dose was 240 mg once daily for participants receiving concomitant cyclosporin A and 480 mg once daily for participants not receiving cyclosporin A. Intravenous infusion was administered only to participants who are unable to swallow tablets or who have a condition that may interfere with absorption of the tablets.	
Reporting group title	Placebo
Reporting group description: Placebo oral or IV formulation was administered once daily for up to 14 weeks, beginning up to Day 28 post-transplant. The number of placebo tablets was to mimic that for letermovir administration according to the concomitant cyclosporin A status. Intravenous infusion was administered only to participants who are unable to swallow tablets or who have a condition that may interfere with absorption of the tablets.	

### Primary: Percentage of Participants with Clinically-significant CMV Infection up to Week 24 Post-transplant

End point title	Percentage of Participants with Clinically-significant CMV Infection up to Week 24 Post-transplant
End point description: Clinically-significant CMV infection was defined as either one of the following: 1) onset of CMV end-organ disease, or 2) initiation of anti-CMV pre-emptive therapy based on documented CMV viremia and the clinical condition of the participant. The percentage of participants with clinically-significant CMV infection was assessed. The Full Analysis Set (FAS) was all randomized participants who received at least one dose of study drug and had no detectable CMV viral DNA on the day treatment was initiated. Participants who prematurely discontinued from the study or had a missing outcome through the 24-week visit window were considered treatment failure (i.e. Non-completers equal failure [NC=F] approach was used).	
End point type	Primary
End point timeframe: Up to Week 24 post-transplant	

End point values	Letermovir	Placebo		
Subject group type	Reporting group	Reporting group

Confidence interval	
level	95 %
sides	2-sided
lower limit	-32.5
upper limit	-14.6

Notes:

[1] - A 1-sided p-value  $\leq 0.0249$  for the risk difference was used for declaring statistical significance

### Secondary: Time to Onset of Clinically-significant CMV Infection (Kaplan-Meier Estimate of Percentage of Participants with a Qualifying Event at Week 24 Post-transplant)

End point title	Time to Onset of Clinically-significant CMV Infection (Kaplan-Meier Estimate of Percentage of Participants with a Qualifying Event at Week 24 Post-transplant)
-----------------	--

End point description:

Clinically-significant CMV infection was defined as either one of the following: 1) onset of CMV end-organ disease, or 2) initiation of anti-CMV pre-emptive therapy based on documented CMV viremia and the clinical condition of the participant. Time to onset of clinically-significant CMV infection was defined from the day of transplantation to the day the participant developed clinically-significant CMV infection, and was analyzed by the Kaplan-Meier method. Participants were censored at the last assessment for participants who discontinued or did not develop clinically-significant CMV infection. The FAS was all randomized participants who received at least one dose of study drug and had no detectable CMV viral DNA on the day treatment was initiated.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 April 2014	Amendment 001: Changes to plasma collection times, clarification that plasma sampling for CMV DNA polymerase chain reaction (PCR) testing was to be confirmatory, change to definition of documented viremia on a confirmatory sample, and revision of guidance regarding viral load threshold for initiation of pre-emptive therapy.
01 September 2014	Amendment 002: Added an exclusion criterion to define and exclude participants of Asian descent, change to allow a participant to reinitiate protocol-defined study therapy under the instance where the confirmatory central laboratory test result for CMV DNA PCR obtained on the day of pre-emptive therapy initiation is negative and pre-emptive therapy is stopped.
16 March 2015	Amendment 003: Addition of a 480-mg oral tablet formulation of letermovir, and removal of the exclusion criterion that excluded participants of Asian descent.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
