Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 May 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 May 2020
Global end of trial reached?	Yes
Global end of trial date	20 May 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Objectives up to/including Week 72:

- To evaluate the long-term safety/tolerability of MRX in pediatric subjects (PS) with PFIC
- To evaluate the effect of LUM001 on serum bile acids in PS with PFIC at 13 wks of treatment
- To evaluate the effect of LUM001 on biochem. markers of cholestasis and liver disease at 13 wks of treatment
- To evaluate the effect of LUM001 on pruritus in PS with PFIC at 13 wks of treatment

Objectives of Optional Follow-up Treatment Period (Post Week 72):

- To offer eligible subjects in the LUM001-501 continued study treatment beyond Week 72 until: (i) the subjects are eligible to enter another LUM001 study or (ii) LUM001 is available commercially
- To obtain safety/efficacy data in subjects treated long-term on LUM001
- To explore a BID and higher daily dosing regimen of LUM001
- To identify genetic indicators of treatment response, incl. exome sequencing
- To assess alpha-fetoprotein levels
- To assess LUM001 formulation palatability

Protection of trial subjects:

All study participants (caregivers as applicable) were required to read and sign an Informed Consent Form.

Background therapy:

none

Evidence for comparator:

none

Actual start date of recruitment	12 February 2014
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 14
Country: Number of subjects enrolled	France: 3

Country: Number of subjects enrolled	United States: 15
Country: Number of subjects enrolled	Poland: 1
Worldwide total number of subjects	33
EEA total number of subjects	18

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	7
Children (2-11 years)	25
Adolescents (12-17 years)	1
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 33 participants were enrolled at 11 sites in 4 countries (US, UK, France, Poland). Participants included 19 females and 14 males ranging from 1 to 13 years of age. Screening, treatment and safety follow-up, was approximately 76 weeks after which participants had the option of continuing in the additional follow-up treatment period.

Pre-assignment

Screening details:

A total of 37 PFIC patients were screened for the study. Four of these patients were screen failures under the original protocol. A total of 33 participants were enrolled and subsequently had genotyping performed. Of the 33 participants, 8 were PFIC1 and 25 were PFIC2. Two pairs of siblings (all with PFIC2) from 2 families were enrolled

Period 1

Period 1 title	Baseline to Week 72
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Maralixibat
------------------	-------------

Arm description:

All subjects received maralixibat (MRX)

Arm type	Experimental
Investigational medicinal product name	Maralixibat chloride
Investigational medicinal product code	
Other name	LUM001
Pharmaceutical forms	Powder and solvent for oral solution
Routes of administration	Oral use

Dosage and administration details:

All participants received MRX, up to 280 µg/kg QD (once daily) until Protocol Amendment 4, when participants continued treatment either on QD dosing, if they met pre-defined responder criteria, or were dose escalated up to a maximum daily dose of 280 µg/kg BID (twice daily) if they did not meet the responder criteria.

Dosing Periods:

- 4-week dose escalation [Dose Level 1-4]
- 4-week stable dosing at 140 µg/kg QD
- 5-week stable dosing at 280 µg/kg QD (participants who tolerated Dose Level 4)
- 59-week long-term exposure (up to maximum 280 µg/kg BID)

Number of subjects in period 1	Maralixibat
Started	33
Week 72	22
Completed	22
Not completed	11
Consent withdrawn by subject	1

Physician decision	1
Adverse event, non-fatal	3
Liver Transplant	1
Non-compliance with study drug	1
Consent withdrawn by caregiver	2
Progressive disease	2

Period 2

Period 2 title	Optional follow-up treatment period
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Maralixibat
Arm description: All subjects received maralixibat (MRX)	
Arm type	Experimental
Investigational medicinal product name	Maralixibat chloride
Investigational medicinal product code	
Other name	LUM001
Pharmaceutical forms	Powder and solvent for oral suspension
Routes of administration	Oral use

Dosage and administration details:

All participants received MRX, up to 280 µg/kg QD until Protocol Amendment 4, when participants continued treatment either on QD dosing, if they met pre-defined responder criteria, or were dose escalated up to a maximum daily dose of 280 µg/kg BID if they did not meet the responder criteria.

Subjects may be eligible for BID dosing based on efficacy as measured by sBA level and ItchRO score.

Number of subjects in period 2	Maralixibat
Started	22
Completed	12
Not completed	10
Adverse event, non-fatal	3
Liver Transplant	2
Did not consent to protocol amendment	4
Progressive disease	1

Baseline characteristics

Reporting groups

Reporting group title	Baseline to Week 72
-----------------------	---------------------

Reporting group description:

A total of 37 PFIC patients were screened for the study. Four of these patients were screen failures under the original protocol. A total of 33 participants were enrolled in the study and subsequently had genotyping performed. Of the 33 participants, 8 were PFIC1 and 25 were PFIC2.

Reporting group values	Baseline to Week 72	Total	
Number of subjects	33	33	
Age categorical			
The mean (SE) overall age was 4.2 (0.56) years, and participants ranged from 1 to 13 years of age.			
Units: Subjects			
<2 years	7	7	
2 to 4 years	15	15	
5 to 8 years	6	6	
9 to 12 years	4	4	
13 to 18 years	1	1	
Gender categorical			
Overall, there were slightly more females than males (19 females [57.6%] and 14 males [42.4%]).

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline to EOT

Adverse event reporting additional description:

All treatment-emergent AEs, whether observed by the Investigator, reported by the subject, the subject's caregiver, from laboratory findings, or other means, were recorded on the AE eCRF and medical record. 'Occurrences' relates to the number of events; 'subjects affected' relates to the number of subjects who experienced the AE.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 May 2014	Protocol amendment 1: (UK and EU) Substantial changes made to the protocol were to: limit propylene glycol exposure to within the recommended limits; modify testing requirements for monitoring the liver chemistry test; and add evaluations in the event of a confirmed elevation in ALT or total bilirubin level. (US) In addition to the changes noted for the UK and EU amendment, substantial changes were made to clarify the frequency for the evaluation of MRX plasma levels.
05 November 2014	Protocol amendment 2: Substantial changes made to the protocol were to: modify inclusion and exclusion criteria regarding serum bile acid levels, surgical procedures, and prohibited medications; increase the number of evaluable participants; increase the number of clinic visits and duration of treatment from 48 weeks to 72 weeks. A second interim analysis was added when all enrolled subjects reached the 48-week visit.
02 November 2015	Protocol amendment 3: Substantial changes made to the protocol were to: add an Optional Follow-up Treatment Period (After Week 72) that allowed eligible participants treated in the LUM001-501 study to continue on treatment after Week 72 until the first of the following occurred: (i) up to 52 weeks of additional treatment (Week 124), or (ii) in the event that a new study opened to enrollment; and added an objective to obtain safety and efficacy data in participants treated long term on MRX including genotyping characteristics
20 December 2016	Protocol amendment 4: Substantial changes made to the protocol were to: - allow continued participation in the Optional Follow-Up Treatment Period - clarify that study treatment in the Optional Follow-up Treatment Period could continue until the first of the following occurred: (i) the participants were eligible to enter another MRX study or (ii) MRX was available commercially - clarify that eligible participants who had previously discontinued from the study could re-enter and receive study treatment in the Optional Follow-up Treatment Period (after Week 72) - describe objectives and assessments of the Optional Follow-up Treatment Period, including the following: exploration of a BID dosing regimen and higher daily dosing of MRX; identification of genetic indicators of treatment response, including use of exome sequencing; assessment of AFP levels; assessment of the palatability of the MRX formulation in all patients; addition of an exploratory objective to allow the possibility of analysis of serum markers of treatment response using metabolomic and proteomic analysis on previously collected serum samples. A higher maximum dosing level was selected for the Optional Follow-up Treatment Period because of the findings in healthy volunteers (Study SHP625-101) of higher fecal bile acid (fBA) excretion on higher maralixibat doses and BID dosing regimen up to 100 mg QD and 50 mg BID with a comparable safety profile across the tested dose range. During the BID dosing regimen, the dose was to be taken at least 30 minutes prior to the main morning and evening meal in order to cover the luminal bile acid release associated with meals. Participants with sBA levels above the ULN and/or ItchRO score ≥ 1.5 were eligible to start BID dosing. If a participant experienced intolerance at any time during the study, the physician Investigator in consultation with the Medical Monitor may have lowered the dose for the remainder of the study.

08 February 2019	Protocol amendment 4.1: Substantial changes made to the protocol were to reflect the change of sponsorship from Lumena Pharmaceuticals LLC to Mirum Pharmaceuticals, Inc; document the change in Medical Monitor; and reduce the interval that new medications used to treat pruritus were prohibited to between Baseline until Week 13 (time point for primary analysis).
------------------	---

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
