

Clinical trial results:

A Phase III, randomized, double-blind, placebo-controlled study evaluating the efficacy and safety of copanlisib in combination with rituximab in patients with relapsed indolent B-cell non-Hodgkin's lymphoma (iNHL) – CHRONOS-3

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	31 August 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 August 2020
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate whether copanlisib in combination with rituximab is superior to placebo in combination with rituximab in prolonging progression-free survival (PFS) in patients with relapsed iNHL who have received one or more lines of treatment, including rituximab, and who either had a treatment-free interval of ≥ 12 months after completion of the last rituximab-containing treatment, or who are unwilling to receive chemotherapy/for whom chemotherapy is contraindicated on reason of age, comorbidities, and/or residual toxicity.

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization guideline E6: Good Clinical Practice. Before entering the study, the informed consent form was read by and explained to all subjects. Participating subjects signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 August 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	255
From 65 to 84 years	197
85 years and over	6

Subject disposition

Recruitment

Recruitment details:

The study was conducted at multiple centers in North America, South America, South Africa, Europe, Asia, and Australia between 03 August 2015 (first subject first visit) and 31 August 2020 (primary completion date).

Pre-assignment

Screening details:

Overall, 652 were screened and total of 458 participants were randomized in a 2:1 ratio to study treatment: 307 participants to copanlisib /rituximab and 151 participants to placebo/rituximab.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Carer, Assessor, Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Copanlisib + Rituximab

Arm description:

Copanlisib (60 mg) was administered intravenously (IV) (over approximately 1 h) on Days 1, 8, and 15 of each 28-day cycle. Rituximab (375 mg/m²) was administered weekly during Cycle 1 on Days 1, 8, 15, and 22, and then on Day 1 of Cycles 3, 5, 7, and 9. Copanlisib was administered before rituximab.

Arm type	Experimental
Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Rituximab dose 375 mg/m² body surface weekly during Cycle 1 on Days 1, 8, 15 and 22, and then on Day 1 of Cycles 3, 5, 7 and 9. The solution for IV infusions is obtained after reconstitution of a calculated concentration of 1 to 4 mg/ml rituximab into an infusion bag containing sterile, pyrogen-free sodium chloride 9 mg/ml (0.9%) solution for injection or 5% D-Glucose in water.

Investigational medicinal product name	Copanlisib
Investigational medicinal product code	BAY 80-6946
Other name	
Pharmaceutical forms	Concentrate for emulsion for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Copanlisib is supplied as lyophilized preparation in a 6 ml injection vial. The total amount of copanlisib per vial is 60 mg. The solution for IV infusions is obtained after reconstitution with normal saline solution. Dosing will be administered on Days 1, 8 and 15 of each 28-day cycle. Copanlisib will be administered before rituximab.

Arm title	Placebo + Rituximab
------------------	---------------------

Arm description:

Placebo was administered intravenously (IV) (over approximately 1 h) on Days 1, 8, and 15 of each 28-day cycle. Rituximab (375 mg/m²) was administered weekly during Cycle 1 on Days 1, 8, 15, and 22, and then on Day 1 of Cycles 3, 5, 7, and 9. Placebo was administered before rituximab.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for emulsion for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Placebo is supplied as lyophilized preparation in a 6 ml injection vial. The developed placebo lyophilisate is equivalent to the 60 mg copanlisib formulation, with regard to the composition of excipients and the instructions for reconstitution and dose preparation. Placebo dosing will be administered on Days 1, 8 and 15 of each 28-day cycle. Placebo will be administered before rituximab.

Number of subjects in period 1	Copanlisib + Rituximab	Placebo + Rituximab
Started	307	151

Primary: Progression free survival (PFS) based on independent central review.

End point title	Progression free survival (PFS) based on independent central review.
End point description:	
Progression-free survival (PFS), was defined as the time (in days) from randomization to progressive disease (PD) or death from any cause (if no progression was documented), whichever occurred earlier. PFS for patients without progression or death at the time of analysis was censored at the last actual date of tumor assessment or last biochemical assessment for patients with Waldenstrom macroglobulinemia (WM) without lesions evaluable by imaging.

Any TEAEs	307	134		
Any copanlisib- or placebo-related TEAE	293	95		
Any rituximab-related TEAE	218	92		

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first administration of study drug until 30 days after the last study drug intake.

Adverse event reporting additional description:

Three patients were randomized to the placebo/rituximab arm but received at least one dose of copanlisib by mistake. These patients were included in the copanlisib/rituximab arm in the analysis of safety variables.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Placebo + Rituximab
-----------------------	---------------------

Reporting group description:

Placebo was administered intravenously (IV) (over approximately 1 h) on Days 1, 8, and 15 of each 28-day cycle. Rituximab (375 mg/m²) was administered weekly during Cycle 1 on Days 1, 8, 15, and 22, and then on Day 1 of Cycles 3, 5, 7, and 9. Placebo was administered before rituximab.

Reporting group title	Copanlisib + Rituximab
-----------------------	------------------------

Reporting group description:

Copanlisib (60 mg) was administered intravenously (IV) (over approximately 1 h) on Days 1, 8, and 15 of each 28-day cycle. Rituximab (375 mg/m²) was administered weekly during Cycle 1 on Days 1, 8, 15, and 22, and then on Day 1 of Cycles 3, 5, 7, and 9. Copanlisib was administered before rituximab.

Serious adverse events	Placebo + Rituximab	Copanlisib + Rituximab

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 January 2015	- The study target population for the efficacy analysis was changed from iNHL patients to FL patients. - The randomization ratio was changed from 1:1 to 2:1 and the stratification factors were changed. - Time to improvement in DRS-P was added as a secondary efficacy variable.
18 February 2016	- The conservative requirement for blood pressure levels during the evaluation of patient's eligibility was removed due to feedback from the investigators and lymphoma specialists. - A requirement for prophylactic antiviral therapy to be given to patients who are positive for HBsAg or HBcAb at screening was added. - Copanlisib was added to the list of prohibited previous therapies and medications.
28 July 2016	- Guidance on dose modification of copanlisib or placebo for hematological toxicity was updated. - Following Health Authority alerts related to safety issues with Zydelig (idelalisib, a PI3K inhibitor) treatment in clinical trials, text was added to provide guidance for monitoring and prophylaxis of opportunistic infections in patients who are at risk for opportunistic infection development while on study treatment.
02 February 2018	- The total sample size was reduced from 567 patients to 450 patients and the primary efficacy analysis was revised to be performed in the FAS instead of both the FAS and FL subpopulation. - Patients considered unwilling/unfit to receive chemotherapy were bundled to differentiate them in a subgroup different from the long-term responders (i.e., progression-free and treatment-free interval of ≥ 12 months after completion of the last rituximab-containing treatment).
08 October 2019	- The statistical assumptions for the primary efficacy analysis of PFS were modified. The required number of PFS events was changed from 288 to 190. - The confirmatory testing strategy was modified.
22 May 2020	- Number of events necessary for primary completion analyses was changed to "at least 190 PFS events" to remain flexible. - Removed potential pooling of strata. In order to avoid a too low number of events, only stratification factors "iNHL histology" and "entry criterion" will be adjusted simultaneously in the statistical analyses. - Confirmatory statistical testing strategy for the US was revised and an additional confirmatory statistical testing strategy for the EU was added.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The Overall Survival analysis is very immature due to the low number of events.

Notes:
