Notes:

**Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No	No

1901/2006 apply to this trial?	
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 April 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	29 April 2019
Global end of trial reached?	Yes
Global end of trial date	29 April 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To compare quality of life scores and times to definitive deterioration of the quality of life (QOL) scores in patients receiving nab-paclitaxel (n-P) + gemcitabine (G) versus gemcitabine (G) in monotherapy using the EORTC QLQ-C30 questionnaire.

Protection of trial subjects:

Ethics review and approval, informed consent, prophylactic medication prior to infusions (to prevent chemotherapy known adverse events as per current practice and protocol recommendations), supportive care and routine monitoring.

Background therapy:

/

Evidence for comparator:

/

Actual start date of recruitment	09 May 2014
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy, Scientific research
Long term follow-up duration	3 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 146
Worldwide total number of subjects	146
EEA total number of subjects	146

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	76
From 65 to 84 years	70
85 years and over	0

## Subject disposition

### Recruitment

#### Recruitment details:

One hundred forty-six patients were included. First patient enrolled: 08-May-2014. Last patient enrolled: 25-Nov-2015. End of trial notification was dated 15-May-2018 (last patient last visit) and submitted to EC and CA 10-Jul-2018. Last follow-up (FU) data collected 05-Feb-2019. The cut off date for final data was on 29-Apr-2019.

### Pre-assignment

#### Screening details:

The study target population was represented by patients with metastatic or unresectable locally advanced pancreatic adenocarcinoma, histologically or cytologically confirmed, eligible for treatment with gemcitabine and nab-paclitaxel in a first line setting. Patients were screened as per inclusion and exclusion criteria per protocol.

### Period 1

Period 1 title	Full study duration: baseline to FU (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
Arm title	Arm A - nab-paclitaxel and gemcitabine

#### Arm description:

Patients were randomised to receive a combination regimen of nab-paclitaxel and gemcitabine.

Arm type	Experimental
Investigational medicinal product name	Nab-paclitaxel
Investigational medicinal product code	
Other name	Abraxane
Pharmaceutical forms	Concentrate for suspension for injection
Routes of administration	Intravenous use

#### Dosage and administration details:

Per protocol dose was 125 mg/m<sup>2</sup>.

Schedule: Infusions repeated for three weeks followed by a week of rest (4 week cycles). Nab-paclitaxel infusions were planned every 7 days on the same day of the week; deviations more than 2 days were not allowed.

Investigational medicinal product name	Gemcitabine
Investigational medicinal product code	
Other name	Gemzar
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

#### Dosage and administration details:

Per protocol dose: 1000 mg/m<sup>2</sup>.

Schedule: For patients in Arm A, gemcitabine was given the same day with and following nab-paclitaxel, i.e. once weekly for 3 weeks followed by a week of rest then repeat (4 week cycles). Gemcitabine infusions were planned every 7 days on the same day of the week; deviations more than 2 days were not allowed.

Arm title	Arm B - gemcitabine monotherapy
-----------	---------------------------------

#### Arm description:

Patients randomised to receive gemcitabine monotherapy.

Arm type	Standard of care - no comparator
----------	----------------------------------

Investigational medicinal product name	Gemcitabine
Investigational medicinal product code	
Other name	Gemzar
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Per protocol dose: 1000 mg/m<sup>2</sup>.

Schedule: For patients in Arm B, gemcitabine was given in an initial sequence of seven weeks followed by a week of rest (first cycle is 8 weeks) then every week for three weeks followed by a week of rest (cycle 2 and subsequent cycles are of 4 weeks). Gemcitabine infusions were planned every 7 days on the same day of the week; deviations more than 2 days were not allowed. Patients in Arm B progressing on gemcitabine monotherapy and eligible to receive nab-paclitaxel and gemcitabine were allowed to switch to the combination.

<b>Number of subjects in period 1</b>	Arm A - nab-paclitaxel and gemcitabine	Arm B - gemcitabine monotherapy
Started	72	74
Completed	72	73
Not completed	0	1
Change of diagnosis/exclusion criterion	-	1

### Primary: Deterioration-free survival rate of the QOL global health status at 3, 6 and 12 months

End point title	Deterioration-free survival rate of the QOL global health status at 3, 6 and 12 months
End point description: 1474 QOL questionnaires were completed (714 in arm A; 761 in arm B) The QOL global health status (GHS) is a functional parameter derived from the EORTC QLQ - C30 questionnaire, based on questions 29 "How would you rate your overall health during the past week?" and 30 "How would you rate your overall quality of life during the past week?". The deterioration free survival rate at 3 months is defined as the Kaplan-Meier estimate of the probability of being alive and free of deterioration of the QOL score at 3 months. The definitive deterioration of the QOL score is a decrease of at least 10 points (minimal clinical important difference) as compared to the baseline score, with no further improvement of more than 10 points as compared to the score qualifying the deterioration or with no data after the deterioration was observed. Death was also considered as an event if the patient did not experience deterioration before death. Patients without event were censored at the time of last FU.	
End point type	Primary
End point timeframe: From date of randomisation to 3, 6 and 12 months respectively	

End point values	Arm A - nab-paclitaxel and gemcitabine	Arm B - gemcitabine monotherapy	Intent to treat set (ITT)	
Subject group type	Reporting group	Reporting group	Subject analysis set

## Statistical analyses

<b>Statistical analysis title</b>	Difference in GHS deterioration-free rates 3 mo
-----------------------------------	---

Statistical analysis description:

Comparison of the deterioration-free survival rates based on definitive deterioration or death at 3, 6, 9, 12 months after randomisation. The comparisons are based on Z-tests after log-log transformations of the survival estimates.

Deterioration-free survival rates at 3 months were respectively: Arm A (n-P+G) 88.89%, 95%CI [79.0-94.3] and Arm B (G monotherapy) 79.74%, 95%CI [60.7-81.3] with p=0.0166. Additional data is available upon request.

Comparison groups	Arm A - nab-paclitaxel and gemcitabine v Arm B - gemcitabine monotherapy
Number of subjects included in analysis	145
Analysis specification	Pre-specified
Analysis type	other <sup>[1]</sup>
P-value	= 0.0166 <sup>[2]</sup>
Method	Z-test

Notes:

[1] - The difference in the deterioration-free rate of the GHS at 3 months between the two arms was statistically significant.

[2] - A stratification per centre was performed. 95% confidence intervals were based on a non-parametric bootstrap procedure. The difference was still significant with p<0.05.

## Primary: QOL global health status deterioration-free median survival

<b>End point title</b>	QOL global health status deterioration-free median survival
------------------------	---

End point description:

The deterioration-free survival is defined as the Kaplan-Meier estimate of median survival time to definitive deterioration of the QOL score or death. The definitive deterioration of the QOL score is a decrease of at least 10 points (minimal clinical important difference) as compared to the baseline score, with no further improvement of more than 10 points as compared to the score qualifying the deterioration or with no data after the deterioration was observed. Death was also considered as an event if the patient did not experience deterioration before death. Patients without event were censored at the time of last follow-up.

<b>End point type</b>	Primary
-----------------------	---------

End point timeframe:

From date of randomisation to end of follow up (max 3 years after database lock when applicable).

<b>End point values</b>	Arm A - nab-paclitaxel and gemcitabine	Arm B - gemcitabine monotherapy	Intent to treat set (ITT)

The deterioration-free survival is defined as the Kaplan-Meier estimate of median survival time to definitive deterioration of the QOL score or death. The definitive deterioration of the QOL score is a decrease of at least 10 points (minimal clinical important difference) as compared to the baseline score, with no further improvement of more than 10 points as compared to the score qualifying the deterioration or with no data after the deterioration was observed. Death was also considered as an event if the patient did not experience deterioration before death. Patients without event were censored at the time of last follow-up.

End point type	Secondary
----------------	-----------

End point timeframe:

From date of randomisation to end of follow up (max 3 years after database lock when applicable).

End point values	Arm A - nab-paclitaxel and gemcitabine	Arm B - gemcitabine monotherapy	Intent to treat set (ITT)	
Subject group type	Reporting group	Reporting group	Subject analysis set	
Number of subjects analysed	72	73	145	
Units: Months				
median (confidence interval 95%)				
Fatigue	10.60 (8.25 to 14.55)	11.04 (8.44 to 13.17)	10.87 (8.97 to 12.71)	
Nausea and vomiting	10.48 (8.97 to 14.55)	10.87 (6.01 to 13.21)	10.58 (8.64 to 12.35)	
Pain	9.05 (6.97 to 11.27)	9.72 (6.44 to 13.17)	9.20 (7.82 to 11.37)	
Dyspnoea	10.27 (7.59 to 12.88)	11.43 (6.51 to 13.86)	10.58 (8.25 to 12.48)	
Insomnia	7.82 (5.55 to 10.61)	8.97 (5.62 to 12.29)	8.74 (6.28 to 10.61)	
Appetite loss	8.44 (6.28 to 11.27)	8.44 (4.63 to 11.37)	8.44 (6.18 to 10.58)

## Statistical analyses

<b>Statistical analysis title</b>	Deterioration-free survival time Kaplan-Meier
-----------------------------------	---

Statistical analysis description:

The deterioration-free survival is defined as the Kaplan-Meier estimate of median survival time to definitive deterioration of the QOL score (as defined above) or death. Median times to definitive deterioration or death with 95%CI are presented for the QOL symptom scales per arm. A logrank comparison between arms was performed for each scale. None of the comparisons was statistically significant. Additional data is available upon request.

Comparison groups	Arm A - nab-paclitaxel and gemcitabine v Arm B - gemcitabine monotherapy
Number of subjects included in analysis	145
Analysis specification	Pre-specified
Analysis type	other <sup>[10]</sup>
P-value	= 0.5448 <sup>[11]</sup>
Method	Logrank

Notes:

[10] - Kaplan-Meier survival analysis.

[11] - p-value of the inter-arm comparison of the median deterioration-free survival times for Fatigue is provided. None of the comparisons of the Symptom scales were statistically significant. Additional data is available upon request.

## Secondary: Exposure to treatment

End point title	Exposure to treatment
-----------------	-----------------------

End point description:

Total cumulative dose exposure is measured by dose intensity (total dose given/total dose planned\*100) per drug.

The "planned dose of nab-paclitaxel" refers, as per protocol, to a weekly administration of 125 mg/m<sup>2</sup> nab-paclitaxel for 3 weeks followed by a week of rest in 4-week cycles (Arm A only). The "planned dose of gemcitabine" refers to a weekly administration of 1000 mg/m<sup>2</sup> gemcitabine following the same day nab-paclitaxel dose in Arm A (4-week cycles) and standard in Arm B (7 infusions + 1 week of rest for cycle 1 and 4-week cycles afterwards). Total doses are the sums of all theoretical "planned" and given doses, respectively.

End point type	Secondary
----------------	-----------

End point timeframe:

From date of first infusion to date of last infusion. For patients in arm B who switched to the combination of n-P + G in second line dose exposure to n-P is given for this subset.

End point values	Arm A - nab-paclitaxel and gemcitabine	Arm B - gemcitabine monotherapy	Safety set	
Subject group type	Reporting group	Reporting group	Subject analysis set	
Number of subjects analysed	72	74	146 <sup>[12]</sup>	
Units: Percentage				
Nab-paclitaxel	73	74	74	
Gemcitabine	75	70	72	

Notes:

[12] - All patients received at least one dose of treatment (Safety set).

## Statistical analyses

No statistical analyses for this end point

## Secondary: Overall response

End point title	Overall response
-----------------	------------------

**End point description:**

Tumour response was assessed locally based on radiological assessments (CT/MRI) of target and non-target lesions and considering the occurrence of new lesions, as per RECIST criteria. Tumour response was defined at each evaluation as complete response (CR), partial response (PR), stable disease (SD) or progressive disease (PD). Best response during treatment was selected for each patient. Overall response (OR) is defined as the best tumor response on treatment for each patient. Responders were considered CR + PR. Some patients were not evaluable for response (no scans available). Overall response rates (ORR) were calculated based on the ITT set.

End point type	Secondary
----------------	-----------

End point timeframe:

Duration of treatment

End point values	Arm A - nab-paclitaxel and gemcitabine	Arm B - gemcitabine monotherapy	Intent to treat set (ITT)	
Subject group type	Reporting group	Reporting group	Subject analysis set	
Number of subjects analysed	72	73	145	
Units: Counts of participants				
CR + PR	31	16	47	
SD or PD	39	53	92	
Not evaluable	2	4	6	

**Statistical analyses**

Statistical analysis title	Overall response counts and rates
----------------------------	-----------------------------------

**Statistical analysis description:**

Descriptive. Rates of overall response (CR and PR) with 95%CI were calculated per arm: Arm A: ORR 44% 95%CI [32-56]; Arm B: ORR 23% 95%CI [13-33]. Percentages are based on evaluable patients only. A comparison between arms was performed (t-test) and the difference in response rates was statistically significant (p=0.008).

Comparison groups	Arm A - nab-paclitaxel and gemcitabine v Arm B - gemcitabine monotherapy
Number of subjects included in analysis	145
Analysis specification	Pre-specified
Analysis type	other <sup>[13]</sup>
P-value	= 0.008 <sup>[14]</sup>
Method	t-test, 2-sided

**Notes:**

[13] - T-test double sided.

[14] - Difference between the 2 arms was statistically significant.

**Secondary: Duration of response (in responders)**

End point title	Duration of response (in responders)
-----------------	--------------------------------------

**End point description:**

Duration of response was calculated from the date of first documented response to the date of progression (including SD after PR) or date of start of new treatment in not progressed, when available. In 2 patients with CR, periods of PR are included. For those not documented as progressed before death, an unknown duration was kept and considered missing data.

End point type	Secondary

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Serious adverse events (SAE) and adverse events (AE) occurring from the signature of informed consent to the end of treatment visit plus 30 days.

Adverse event reporting additional description:

All SAEs occurring between the signature of informed consent and the end of treatment visit + 30 days are listed.

Severe adverse events (grade 3-5, worst grade per patient) are listed in the non-serious AE table, SAEs are included.

A summary of the severe laboratory abnormalities is provided in section "End points".

Assessment type	Systematic
-----------------	------------

occurrences (all)	1		

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 May 2014	Amendment to the ICF due to changes to the safety language in the ICF.
26 November 2014	Amendment to add four additional participating institutions.
20 July 2015	Amendment of the protocol to adjust the timing of study procedures, to clarify inclusion/exclusion criteria and increase sample size from 110 to 143 due to observed patient compliance in providing QOL data.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
18 June 2015	Temporary interruption of recruitment at the completion of initial sample size on 18-Jun-2015. The protocol amendment to adjust the timing of study procedures, to clarify inclusion/exclusion criteria and increase sample size from 110 to 143 due to observed patient compliance in providing QOL data was approved on 17-Jul-2015 by the Belgian Health Authority (FAGG) and 20-Jul-2015 by the designated central ethics committee. Recruitment was restarted after all regulatory approvals on 24-Jul-2015.	24 July 2015

Notes:

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Quality of life endpoints are sensitive to confounding factors such as age, intercurrent disease, time from last completed questionnaire to the last follow-up or death.  
Tumour response and AE relationship to treatment were locally assessed.

Notes:
