

## Clinical trial results:

### A Phase 3, Randomized, Double-blind, Sham-Procedure Controlled Study to Assess the Clinical Efficacy and Safety of ISIS 396443 Administered Intrathecally in Patients with Infantile-onset Spinal Muscular Atrophy

#### Summary

EudraCT number	2013-004422-29
Trial protocol	IT GB ES SE DE BE
Global end of trial date	21 November 2016

#### Results information

Result version number	v1
This version publication date	01 June 2017
First version publication date	01 June 2017

#### Trial information

##### Trial identification

Sponsor protocol code	ISIS 396443-CS3B
-----------------------	------------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02193074
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Biogen
Sponsor organisation address	225 Binney Street, Cambridge, United States, United States, 02142
Public contact	Biogen Study Medical Director, Biogen, clinicaltrials@biogen.com
Scientific contact	Biogen Study Medical Director, Biogen, clinicaltrials@biogen.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001448-PIP01-13
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 November 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	21 November 2016
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the study is to examine the clinical efficacy of nusinersen (ISIS 396443) administered intrathecally (IT) to subjects with infantile-onset spinal muscular atrophy (SMA). The secondary objective of the study is to examine the safety and tolerability of nusinersen administered IT to subjects with infantile-onset SMA.

Protection of trial subjects:

Written informed consent was obtained from each subject prior to evaluations being performed for eligibility. Subjects were given adequate time to review the information in the informed consent and were allowed to ask, and have answered, questions concerning all portions of the conduct of the study. Through the informed consent process each subject was made aware of the purpose of the study, the procedures, the benefits and risks of the study, the discomforts and the precautions taken. Any side effects or other health issues occurring during the study were followed up by the study doctor. Subjects were able to stop taking part in the study at any time without giving any reason.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 July 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United States: 55
Country: Number of subjects enrolled	Spain: 11
Country: Number of subjects enrolled	Germany: 10
Country: Number of subjects enrolled	Italy: 9
Country: Number of subjects enrolled	France: 8
Country: Number of subjects enrolled	Canada: 6
Country: Number of subjects enrolled	Australia: 5
Country: Number of subjects enrolled	United Kingdom: 5
Country: Number of subjects enrolled	Turkey: 5
Country: Number of subjects enrolled	Japan: 3
Country: Number of subjects enrolled	Sweden: 3
Country: Number of subjects enrolled	Belgium: 1
Country: Number of subjects enrolled	Korea, Republic of: 1
Worldwide total number of subjects	122
EEA total number of subjects	47

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	122
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

After parental informed consent was obtained and prior to any treatment, subjects entered a Screening Period of up to 21 days to determine their eligibility for the study. Of the 149 subjects screened, 27 were screening failures.

### Pre-assignment period milestones

Number of subjects started	122
Number of subjects completed	121

### Pre-assignment subject non-completion reasons

Reason: Number of subjects	Withdrew prior to receiving treatment: 1
----------------------------	--

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Control

Arm description:

Sham procedure administered on Study Days 1, 15, 29, 64, 183, and 302.

Arm type	Sham Comparator
No investigational medicinal product assigned in this arm	

<b>Arm title</b>	Nusinersen
------------------	------------

Arm description:

Nusinersen (2.4 mg/mL) administered as an intrathecal (IT) lumbar puncture injection on Study Days 1, 15, 29, 64, 183, and 302.

Arm type	Experimental
Investigational medicinal product name	nusinersen
Investigational medicinal product code	ISIS 396443
Other name	BIIB058, Spinraza, IONIS-SMN Rx, ISIS SMNRx
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use

Dosage and administration details:

Subjects randomized to the ISIS 396443 treatment group received a single IT LP injection of study treatment as a slow bolus (1 to 3 minutes) using a spinal anesthesia needle and 5-mL syringe on Study Days 1, 15, 29, 64, 183, and 302.

<b>Number of subjects in period 1<sup>[1]</sup></b>	Control	Nusinersen
Started	41	80
Completed During Follow-Up Period	11 <sup>[2]</sup>	26 <sup>[3]</sup>
Completed Due to Early Study Termination	13 <sup>[4]</sup>	39 <sup>[5]</sup>
Completed	24	65
Not completed	17	15
Consent withdrawn by subject	1	2
Adverse event, non-fatal	16	13

---

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: One subject withdrew prior to receiving treatment and is accounted for in the Pre-Assignment Details.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Milestones describe the subjects' completion status.

[3] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Milestones describe the subjects' completion status.

[4] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Milestones describe the subjects' completion status.

[5] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Milestones describe the subjects' completion status.

## Baseline characteristics

### Reporting groups

Reporting group title	Control
Reporting group description: Sham procedure administered on Study Days 1, 15, 29, 64, 183, and 302.	
Reporting group title	Nusinersen
Reporting group description: Nusinersen (2.4 mg/mL) administered as an intrathecal (IT) lumbar puncture injection on Study Days 1, 15, 29, 64, 183, and 302.	

Reporting group values	Control	Nusinersen	Total
Number of subjects	41	80	121
Age categorical Units: Subjects			

Age Continuous Units: days arithmetic mean standard deviation	164.7 ± 48.54	147.2 ± 46.85	-
Gender, Male/Female Units: Subjects			
Female	24	43	67
Male	17	37	54
Age Continuous   Age at First Dose Units: days arithmetic mean standard deviation	180.5 ± 50.92	163.4 ± 49.57	-

## End points

### End points reporting groups

Reporting group title	Control
Reporting group description: Sham procedure administered on Study Days 1, 15, 29, 64, 183, and 302.	
Reporting group title	Nusinersen
Reporting group description: Nusinersen (2.4 mg/mL) administered as an intrathecal (IT) lumbar puncture injection on Study Days 1, 15, 29, 64, 183, and 302.	

### Primary: Percentage of Motor Milestones Responders

End point title	Percentage of Motor Milestones Responders
End point description: The definition of a motor milestones responder was based on improvement in the motor milestones categories in Section 2 of the Hammersmith Infant Neurological Examination (HINE), with the exclusion of voluntary grasp, as follows: (i) subject demonstrates $\geq 2$ -point increase in the motor milestones category of ability to kick or achievement of maximal score on that category (touching toes), or a 1-point increase in the motor milestones category of head control, rolling, sitting, crawling, standing, or walking, and (ii) among the motor milestone categories, with the exclusion of voluntary grasp, there are more categories where there is improvement as defined in (i) than worsening. (For the category of ability to kick, worsening is defined as $\geq 2$ -point decrease or decrease to the lowest possible score of no kicking. For the other categories, worsening is defined as $\geq 1$ -point decrease.) The lowest possible score for the HINE is 0 (zero), and the highest possible score for the HINE is 28.	
End point type	Primary
End point timeframe: assessed at the later of the Day 183, Day 302, or Day 394 study visits	

End point values	Control	Nusinersen		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	37	73		
Units: percentage of participants	0	51		

### Statistical analyses

Statistical analysis title	Statistical Analysis 1

Method	Fisher exact
Parameter estimate	Difference in percentages
Point estimate	50.68

Confidence interval	
level	95 %
sides	2-sided
lower limit	31.81
upper limit	66.48

### Primary: Time to Death or Permanent Ventilation

End point title	Time to Death or Permanent Ventilation
End point description:	
Estimated proportion of participants who died or required permanent ventilation by a given study day, based on the Kaplan-Meier product-limit method. Time to death or permanent ventilation was defined as either tracheostomy or $\geq 16$ hours ventilation/day continuously for $> 21$ days in the absence of an acute reversible event. This endpoint was adjudicated by a blinded, independent group of experienced clinicians, the Event Adjudication Committee (EAC), based on review of clinical study data and supporting information. Results are based on all available data.	
End point type	Primary
End point timeframe:	
Day 91, Day 182, Day 273, Day 364, Day 394	

End point values	Control	Nusinersen		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	28	31		
Units: proportion of participants				
number (not applicable)				
By Day 91 (13 weeks/3 months)	0.268	0.24		
By Day 182 (26 weeks/6 months)	0.605	0.294		
By Day 273 (39 weeks/9 months)	0.702	0.404		
By Day 364 (52 weeks/12 months)	0.735	0.447		
By Day 394 (13 months)	0.735	0.447

## Secondary: Percentage of Children's Hospital of Philadelphia Infant Test of Neuromuscular Disorders (CHOP-INTEND) Responders

End point title	Percentage of Children's Hospital of Philadelphia Infant Test of Neuromuscular Disorders (CHOP-INTEND) Responders
-----------------	---

End point description:

A participant was considered a CHOP-INTEND responder if the change from baseline in CHOP-INTEND total score is  $\geq 4$  points based on assessment at the later of the Day 183, Day 302, or Day 394 study visits. CHOP-INTEND tests includes 16 items structured to move from easiest to hardest with the grading including gravity eliminated (lower scores) to antigravity movements (higher scores). Total scores range from 0 to 64, with higher scores indicating better movement functioning. Results are based on all available data.

End point type	Secondary

## Secondary: Number of Participants Experiencing Adverse Events (AEs), Serious AEs (SAEs) and Discontinuations Due to AEs

End point title	Number of Participants Experiencing Adverse Events (AEs), Serious AEs (SAEs) and Discontinuations Due to AEs
-----------------	--

End point description:

AE: any unfavorable and unintended sign, symptom, or disease temporally associated with the study or use of investigational drug product, whether or not the AE is considered related to the investigational drug product. SAE: any AE that in the view of either the Investigator or Sponsor, meets any of the following criteria: results in death; is life threatening; that is, poses an immediate risk of death at the

time of the event; requires in-patient hospitalization or prolongation of existing hospitalization; results in a persistent or significant incapacity or substantial disruption of the ability to conduct normal life functions; results in congenital anomaly or birth defect in the offspring of the participant (whether male or female); is an important medical event in the opinion of the Investigator or Sponsor.

occurrences (all)	0	3	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 April 2014	- Finalized aspects of the study design.
20 June 2014	- Added language explaining that all primary endpoint events were to be reviewed in a blinded fashion by a central, independent adjudication committee. - Added language to specify the segregation of responsibilities and blinding for personnel making decisions regarding subjects' ventilation and performing efficacy evaluations.
22 April 2016	- Clarification was made to allow subjects who complete all study assessments to rollover into a long-term extension study in the scenario of the study being terminated early based on the assessment of risk-benefit of ISIS 396443 as a result of the interim analysis. - A statement was added related to unblinding of certain representatives from the study Sponsor during the conduct of the interim analysis. - Clarification was made on the adjustment of visit schedule for subjects who experience treatment delays as a result of an illness. - Changes were made to the primary and secondary efficacy endpoints based on new information from Phase 2 and natural history data and to improve ability to interpret some of the endpoints in the event that the study is terminated early. - A sample size justification was added based on the power analysis using the new primary endpoint of motor milestone responders. - Timing of the interim and final analyses was clarified. - Clinical experience was updated to reflect the most recent version of the Investigator's Brochure. - A definition for Interim Efficacy Set was added. - A description of the endpoints and timing of the interim analysis was added. - Details on the definitions of primary, secondary, and tertiary endpoints were added. - References related to analytical methods were added.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
