General information about the trial

Main objective of the trial:

The Primary objective for this trial was to estimate the Maximum Tolerated Dose (MTD) and/or Recommended Phase II Dose (RP2D) and schedule of the following two combinations in patients with HR-positive/HER2-negative advanced BC.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Subject disposition

Recruitment

Recruitment details:

Novartis made the decision to not open the Phase II portion of the study, for business reasons. Sufficient data had already been collected and no additional data for the triplet combinations was needed. As a result, the Phase II portion of the trial was not opened. Investigators continued to complete the Phase I portion per Amendment 3.

Pre-assignment

Screening details:

Full Analysis et and safety set both include 70 patients
Dose determining set includes 64 patients
Pharmacokinetic set includes 68 patients

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 July 2014	The purpose of this amendment was to appropriately manage the safety of patients while on the study medications .Changes were made to the inclusion/exclusion criteria to raise the ANC Level, the option to explore additional schedules was clarified, Concomitant medication exclusions were modified, Hyperglycemia and alanine aminotransferase (ALT) DLT criterion were modified.
08 January 2015	The purpose of this amendment was to include guidelines for management of pneumonitis. This was due to an urgent safety measure issued in response to cases of pneumonitis observed in patients being treated with BYL719.
11 November 2015	Main changes were : <ul style="list-style-type: none">- Updated hepatic monitoring plan, and to provide additional guidance for BKM120 and ribociclib dose modifications related to hepatotoxicity.- Updated cardiac monitoring plan, and to provide additional guidance on dose modifications for ribociclib related cardiotoxicities.
29 March 2016	The main purpose of this amendment was to correct a clerical error in the previous version of the protocol within the criteria for discontinuation language in Appendix 16.1.1-Section 7.1.4 (Discontinuation of treatment).
15 November 2016	The main purpose of this amendment was to provide updated guidelines when a patient exhibits suicidal ideation and increase patient safety Provide updated study drug administration guidelines and in particular food administration recommendations for LEE011, BKM120 and BYL719 Provide updated guidelines on discontinuation of study treatment, following a Health Authority request. They include modifications to the sections outlining the reasons where study treatment may be discontinued and, where study treatment must be discontinued. An additional statement regarding ongoing patients continuing in an LEE011 rollover protocol has also been added. Clarify the definition of dose limiting toxicities (DLTs) to indicate that a DLT occurs during the first 28 days of dosing (Cycle 1). Provide updated study drug guidelines for ongoing patients who may continue treatment in an LEE011 rollover protocol

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Novartis made the decision to not open the Phase II portion of the study, for business reasons. Sufficient data had already been collected and no additional data for the triplet combinations was needed.
