Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 May 2016
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	05 May 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate the efficacy of fidaxomicin extended pulsed (EPFX) in the treatment of Clostridium difficile (C. difficile) infection (CDI) in male and female patients aged 60 years and older compared with standard vancomycin therapy.

Protection of trial subjects:

International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH) Good Clinical Practice (GCP) Guidelines, and applicable local regulations, including the European Directive 2001/20/EC, on the protection of human rights, and with the ethical principles that have their origin in the Declaration of Helsinki. Astellas ensures that the use and disclosure of protected health information (PHI) obtained during a research study complies with the federal, national and/or regional legislation related to the privacy and protection of personal information.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 November 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

EEA total number of subjects	338

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	55
From 65 to 84 years	245
85 years and over	64

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at 86 clinical sites in 21 countries in Europe and Asia. Randomization was stratified by CDI severity (severe or non-severe), presence or absence of cancer, age (≥ 75 years or < 75 years) and number of previous recurrences (0, 1, 2) in the 3 months prior to the study.

Pre-assignment

Screening details:

Females and males of ≥ 60 years of age with CDI confirmed by clinical symptoms (either > 3 UBMs or ≥ 200 mL of unformed stool [for patients having rectal collection devices] in the 24 hours prior to randomization and CDI test confirmed positive for presence of C. difficile toxin A/B in stool (within 48 hours prior to randomization) were enrolled.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Fidaxomicin Extended Pulsed Regimen (EPFX)

Arm description:

Participants received 200 mg fidaxomicin from day 1 to day 5 twice daily, followed by a 1-day gap (day 6) before starting alternate day dosing of 1 tablet of fidaxomicin 200 mg once daily from day 7 to day 25.

Arm type	Experimental
Investigational medicinal product name	Fidaxomicin
Investigational medicinal product code	ASP2819, OPT-80
Other name	DIFICLIR™, DIFICID
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received 200 mg of immediate-release fidaxomicin tablets orally in the morning and evening from day 1-5 twice daily and alternate day dosing from day 7-25 once daily.

Arm title	Vancomycin
------------------	------------

Arm description:

Participants received 125 mg vancomycin from day 1 to day 10, 4 times daily.

Arm type	Active comparator
Investigational medicinal product name	Vancomycin
Investigational medicinal product code	
Other name	Vancocin
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received 125 mg of vancomycin 4 times daily (with a time interval of 6 hours) at the same time each day from day 1 to day 10.

Number of subjects in period 1	Fidaxomicin Extended Pulsed Regimen (EPFX)	Vancomycin
Started	183	181
Treated	181	181
Completed	132	125
Not completed	51	56
Randomized but Never Received/Dispensed Study Drug	2	-
Physician Decision	7	2
Death	29	36
Lost to Follow-up	6	9
Miscellaneous	1	2
Withdrawal by Patient	6	7

End points

End points reporting groups

Reporting group title	Fidaxomicin Extended Pulsed Regimen (EPFX)
Reporting group description: Participants received 200 mg fidaxomicin from day 1 to day 5 twice daily, followed by a 1-day gap (day 6) before starting alternate day dosing of 1 tablet of fidaxomicin 200 mg once daily from day 7 to day 25.	
Reporting group title	Vancomycin
Reporting group description: Participants received 125 mg vancomycin from day 1 to day 10, 4 times daily.	

Primary: Percentage of Participants with a Sustained Clinical Cure of CDI at 30 Days after End of Treatment

End point title	Percentage of Participants with a Sustained Clinical Cure of CDI at 30 Days after End of Treatment
End point description: Sustained clinical cure was defined as an assessment of clinical response at test of cure (TOC; day 12 for vancomycin and day 27 or 12 for EPFX arm) and no recurrence of CDI from TOC until time of assessment. Clinical response was determined by the investigator based on the European Society of Clinical Microbiology and Infectious Diseases (ESCMID) criteria at TOC. Treatment response was present when either stool frequency decreases or stool consistency improved and parameters of disease severity (clinical, laboratory, radiological) improved and no new signs of severe disease developed. The analysis population was the modified Full Analysis Set (mFAS), which consisted of randomized participants who received at least 1 dose of study drug and had confirmed CDI in the 24 hours prior to randomization and CDI test confirmed positive for presence of <i>C. difficile</i> toxin A or B in stool 48 hours prior to randomization.	
End point type	Primary
End point timeframe: Day 40 (for vancomycin) and day 55 (for EPFX)	

End point values	Fidaxomicin Extended Pulsed Regimen (EPFX)	Vancomycin		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	177	179		
Units: percentage of participants				
number (confidence interval 95%)	70.1 (63.3 to 76.8)	59.2 (52.0 to 66.4)		

Statistical analyses

Secondary: Time to Resolution of Diarrhea

End point title	Time to Resolution of Diarrhea
-----------------	--------------------------------

End point description:

Time to resolution of diarrhea was defined as the time elapsing (in hours rounded up from minutes $>$ 30) from the start of treatment (time of first dose of study drug) to resolution of diarrhea (time of the

last unformed bowel movement [UBM] the day prior to the first of 2 consecutive days of ≤ 3 UBMs, $> 50\%$ reduction in number of stools or $> 75\%$ reduction in volume of liquid stool) that are sustained through to TOC. Participants without a resolution of diarrhea on day 25 (600 hours) for EPFX or day 10 (240 hours) for standard vancomycin were censored on day 25 or 10. Participants who discontinued early before resolution of diarrhea were also censored on the day of discontinuation. Participants with no UBM records were excluded from the analysis. The analysis population was the mFAS.

End point type	Secondary

----------------------------	--------------

Statistical analysis description:

From the Cox proportional hazards model with covariates for treatment, CDI severity, presence or absence of cancer, age (≥ 75 or < 75 years) and number of previous recurrences (0, 1 or 2) in the 3 months prior to the study.

Comparison groups	Fidaxomicin Extended Pulsed Regimen (EPFX) v Vancomycin
Number of subjects included in analysis	342
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.066 ^[7]
Method	Cox Proportional Hazards Model
Parameter estimate	Hazard ratio (HR)
Point estimate	0.8
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.63
upper limit	1.01

Notes:

[7] - Adjusted for treatment, CDI severity, presence or absence of cancer, age (≥ 75 or < 75 years) and number of previous recurrences (0, 1 or 2) in the 3 months prior to the study.

Statistical analysis title	Comparison of Survival Curves
----------------------------	-------------------------------

Statistical analysis description:

The comparison of the difference of the 2 treatment groups was done using a stratified Wilcoxon-Gehan test, stratified by CDI severity, presence or absence of cancer, age (≥ 75 or < 75 years) and number of previous recurrences (0, 1 or 2) in the 3 months prior to the study.

Comparison groups	Fidaxomicin Extended Pulsed Regimen (EPFX) v Vancomycin
Number of subjects included in analysis	342
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.068 ^[8]
Method	Stratified Wilcoxon-Gehan test

Notes:

[8] - Stratified by CDI severity, presence or absence of cancer, age group (≥ 75 or < 75 years) and number of previous recurrences (0, 1 or 2) in the 3 months prior to the study.

Secondary: Percentage of Participants with a Recurrence of CDI at Day 40, Day 55 and Day 90

End point title	Percentage of Participants with a Recurrence of CDI at Day 40, Day 55 and Day 90
-----------------	--

End point description:

For participants with clinical response at TOC, recurrence of CDI was defined as re-establishment of diarrhea after TOC to an extent (judged by the frequency of passed UBMs) that is greater than the frequency recorded on day 10 for vancomycin arm or day 25 for EPFX arm (2 days prior to TOC), confirmed by a CDI test positive for Toxin A/B and requiring further CDI therapy. The analysis population was the mFAS.

Statistical analysis description:

The comparison of the difference of the 2 treatment groups was done using a stratified Wilcoxon-Gehan test, stratified by CDI severity, presence or absence of cancer, age (≥ 75 or < 75 years) and number of previous recurrences (0, 1 or 2) in the 3 months prior to the study.

Comparison groups	Fidaxomicin Extended Pulsed Regimen (EPFX) v Vancomycin
Number of subjects included in analysis	284
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.006 ^[12]
Method	Stratified Wilcoxon-Gehan test

Notes:

[12] - Stratified by CDI severity, presence or absence of cancer, age group (≥ 75 or < 75 years) and number of previous recurrences (0, 1 or 2) in the 3 months prior to the study.

Statistical analysis title	Hazard Ratio
Statistical analysis description: From the Cox proportional hazards model with covariates for treatment, CDI severity, presence or absence of cancer, age (≥ 75 or < 75 years) and number of previous recurrences (0, 1 or 2) in the 3 months prior to the study.	
Comparison groups	Fidaxomicin Extended Pulsed Regimen (EPFX) v Vancomycin
Number of subjects included in analysis	284
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 ^[13]
Method	Cox Proportional Hazards Model
Parameter estimate	Hazard ratio (HR)
Point estimate	0.27
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.12
upper limit	0.52

Notes:

[13] - Adjusted for treatment, CDI severity, presence or absence of cancer, age (≥ 75 or < 75 years) and number of previous recurrences (0, 1 or 2) in the 3 months prior to the study.

Secondary: Disease-free Survival After Day 10

End point title	Disease-free Survival After Day 10
End point description: Disease-free survival was defined as the time in days a participant did not have symptoms of diarrhea from day 10 up to day 90 for participants who responded at TOC. Participants who completed the study but did not show symptoms of diarrhea were censored at day 90, and participants who discontinued early were censored at the day of discontinuation. The analysis population was mFAS. Due to the low number of participants with symptoms of diarrhea, median and 95% CI could not be estimated and are denoted as "99999."	
End point type	Secondary
End point timeframe: From day 10 up to day 90	

End point values	Fidaxomicin Extended Pulsed Regimen (EPFX)	Vancomycin		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	137	147		
Units: days				
median (confidence interval 95%)				
Percentile 50	99999 (99999 to 99999)	99999 (99999 to 99999)

Secondary: Number of Participants with Adverse Events

End point title	Number of Participants with Adverse Events
------------------------	--

End point description:

Safety was assessed by adverse events (AEs), which included abnormalities identified during a medical test (e.g. laboratory tests, vital signs, electrocardiogram, etc.) if the abnormality induced clinical signs or symptoms, needed active intervention, interruption or discontinuation of study medication or was clinically significant. A serious AE (SAE) was an event resulting in death, persistent or significant disability/incapacity or congenital anomaly or birth defect, was life-threatening, required or prolonged hospitalization or was considered medically important. The analysis population was the Safety Analysis Set (SAF), which consisted of all randomized participants who took at least 1 dose of study medication.

End point type	Secondary
End point timeframe:	
From first dose of study drug to end of study (up to 90 days)	

End point values	Fidaxomicin Extended Pulsed Regimen (EPFX)	Vancomycin

Reporting groups

Reporting group title	Vancomycin
-----------------------	------------

Reporting group description:

Participants received 125 mg vancomycin from day 1 to day 10, 4 times daily.

Reporting group title	Fidaxomicin Extended Pulsed Regimen (EPFX)
-----------------------	--

Reporting group description:

Participants received 200 mg fidaxomicin from day 1 to day 5 twice daily, followed by a 1-day gap (day 6) before starting alternate day dosing of 1 tablet of fidaxomicin 200 mg once daily from day 7 to day 25.

Serious adverse events	Vancomycin	Fidaxomicin Extended Pulsed Regimen (EPFX)	
Total subjects affected by serious adverse events			
subjects affected / exposed	78 / 181 (43.09%)	68 / 181 (37.57%)	
number of deaths (all causes)	36	28	
number of deaths resulting from adverse events
