

Clinical trial results:

A Randomized, Double-blind, Placebo Controlled, 2-arm, Parallel-group, 26-week, Multicenter Study to Evaluate the Efficacy, Safety, and Tolerability of Canagliflozin in the Treatment of Subjects with Type 2 Diabetes Mellitus with Inadequate Glycemic Control on Metformin and Sitagliptin Therapy

Summary

EudraCT number	2013-004819-40
Trial protocol	DE
Global end of trial date	11 September 2015

Results information

Result version number	v1 (current)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 September 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	11 September 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objectives were to assess the effect of canagliflozin relative to placebo on glycosylated hemoglobin (HbA1c) and to assess the safety and tolerability of canagliflozin.

Protection of trial subjects:

The safety assessments included the clinical laboratory tests (hematology, serum chemistry, FPG, and urinalysis), fasting lipid, electrocardiogram (ECG), vital signs, hypoglycemic episodes, fasting self-monitored blood glucose (SMBG) and physical examinations. Adverse events (AEs) were assessed throughout the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	21 February 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 35
Country: Number of subjects enrolled	Canada: 39
Country: Number of subjects enrolled	France: 16
Country: Number of subjects enrolled	Germany: 29
Country: Number of subjects enrolled	United States: 94
Worldwide total number of subjects	213
EEA total number of subjects	45

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	161
From 65 to 84 years	52
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Total of 390 subjects screened, out of that 218 subjects were randomly assigned in 1:1 ratio to canagliflozin or placebo treatment. However, One subject was randomized twice (once to placebo and once to canagliflozin) was excluded from the safety analysis set, therefore 216 of the 218 randomized subjects were included in the analyses.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Subjects administered with placebo (inactive medication) once daily for 26 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects administered with matching placebo to canagliflozin orally, once daily for 26 weeks.

Arm title	Canagliflozin
------------------	---------------

Arm description:

Subjects administered canagliflozin (JNJ-28431754) 100 milligram (mg) titratable to 300 mg once daily for 26 weeks.

Arm type	Experimental
Investigational medicinal product name	Canagliflozin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects administered with canagliflozin orally, once daily for 26 weeks.

Number of subjects in period 1	Placebo	Canagliflozin
Started	106	107
Completed	81	96
Not completed	25	11
Physician decision	2	-
Consent withdrawn by subject	15	8
Adverse event, non-fatal	3	1
Lost to follow-up	2	2
Protocol deviation	2	-
Lack of efficacy	1	-

Primary: Change From Baseline in Glycosylated Haemoglobin (HbA1c) at Week 26

End point title	Change From Baseline in Glycosylated Haemoglobin (HbA1c) at Week 26
End point description:	
The change in the value of glycosylated hemoglobin (the concentration of glucose bound to hemoglobin as a percent of the absolute maximum that can be bound) from baseline at Week 26 was compared between the different treatment groups. mITT population included all randomized subjects who received at least 1 dose of double blind study drug. A total of 3 subjects were excluded from the mITT population due to potential misconduct and GCP compliance issues. Here, 'N' (number of subjects analyzed) signifies those subjects who were evaluable for this outcome measure.	
End point type	Primary
End point timeframe:	
Baseline and Week 26	

End point values	Placebo	Canagliflozin

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 February 2014	The overall reason for the second amendment was to include PRO instruments to assess the subjects satisfaction with their health and their degree of diabetes-related distress.
18 September 2014	The overall reason for the third amendment was to lower the maximally or near-maximally effective dose of metformin to greater than or equal to (\geq) 1,500 milligram per day (mg/day), to remove the prohibition of past use of SGLT2 inhibitors and to clarify the limitations of prior use of other SGLT2 inhibitors.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
